region and pushed her conquests among the Volsci, the Hernici, and the Aurunci, and other tribes that dwelt among the foothills of the Apennines, the name Latium was extended to include all the country from the Tiber to the Liris (now Garigliano). The early inhabitants of Latium—the Latini (q.v.)—were a shepherd people of warlike, marauding habits, dwelling in many towns and loosely bound into a sort of federation, with a common worship and a central shrine of Jupiter Latiaris on Mons Albanus. Their earliest towns were Ardea, Lanuvium, and Lavinium in the plain, and Tusculum, on the Alban slopes. Alba Longa was also an early settlement, from this town, according to the story, which may well be based on fact, was colonized Rome (q.v.). In the course of time Rome destroyed all the neighboring towns or reduced them to a state of vassalage and at length became the recognized head of the Latin League. The powers of the Latins were reduced, their duties as allies (but not their privileges) were increased, and finally the Latin League was abolished. Then the towns revolted in 340 B.C., and the Latin War put an end to their independent political existence. Again, in 89 B.C., the Latin towns took up arms against Rome in the Social War (q.v.). This time the confederates were thoroughly crushed, and Latium never again thought of resisting the power of Rome. By the end of the Republic all the Latin towns enjoyed the privileges of Roman citizenship.

LATONA (Lat., from Gk. Ἀητώ, *Lētō*). In Grecian mythology, daughter of Cœus and Phœbe, the mother of Apollo and Artemis by Zeus. The oldest version of the legend is in the Homeric Hymn to Apollo. In this all lands refused to receive the goddess in her need, except Delos (q.v.), and this island yielded only when Leto swore it should be the specially favored seat of worship for the deity whose mother she was to be. Later legend made the jealousy of Hera more prominent and added the tale that Poseidon fixed the floating island of Delos, that it might furnish a refuge for Latona. This later version also made Artemis the twin sister of Apollo. Leto was commonly worshiped in conjunction with her children, but we hear of separate shrines to her at Delos, Platea, Delphi, Argos, Mantinea, and in Xanthus in Lycia; there was a grove sacred to her in Crete. In Hellenistic and Roman times the name was given to the nature goddess worshiped under the name of the "Mother" throughout much of Asia Minor, and often called Artemis.

LATOPOLIS, lā'tōp'ō-lis. See ESNE.

LA TORRE, DUQUE DE. See SERRANO Y DOMINGUEZ, FRANCISCO, DUQUE DE LA TORRE.

LA TOUCHE-TRÉVILLE, lā tōōsh'-trā'vél', LOUIS RENÉ VASSOR, VISCOUNT DE (1745-1804). A French naval officer, born at Rochefort. He entered the navy in 1757 and distinguished himself especially in the American Revolution. In 1780 he was put in command of a frigate for his

bravery in the capture of a British vessel off Newport, R. I., and in the next year was wounded at Yorktown. In 1786 he took part in the framing of the Maritime Code, and three years later was deputy to the States-General from Montargis. Under the Directory he took charge of an expedition against Naples. He commanded a squadron at Brest and met Nelson and forced him to retreat (1801). At the end of the same year he was put in command of the fleet at Aix destined for Santo Domingo. He got to Port-au-Prince in time to save the city from the negroes, fortified the place, and with it as a base made several successful attacks on the British West Indies and English commerce. He succeeded in beating off the fleet sent to capture him (1803). In 1804 he took command of the French fleet in the Mediterranean, but died in the same year.

LA TOUR, lā'tōor', MAURICE QUENTIN DE (1704-88). A French pastel-portrait painter. He was born at Saint-Quentin and may be called self-taught, though he was the pupil in Paris of a little-known artist, Spoëde. He went to Cambrai when the congress was held there in 1724 and is said to have attracted so much attention that he was invited to go to London with the English Ambassador. At least his sojourn in England is authentic. In 1746 he became a member of the Academy, was promoted councillor five years later, and in 1750 became court painter, with lodgings in the Louvre, where his sitters included the court and all the notable characters of the day. He founded a free school of design at Saint-Quentin and left to the Ecole des Beaux-Arts three prizes, which are still distributed. Especially fine were his portraits of women, which were always flattering yet characteristic, often surrounded by highly elaborate and beautiful accessories. Among these must be mentioned Queen Mary Leszczynska, Madame de Pompadour (1755), the Dauphine Marie de Saxe, and Madame de Mondonville, all in the Louvre; Mademoiselle Camargo and Mademoiselle Fel, at Saint-Quentin. His best portraits of men include Louis XV, the Dauphin, Rousseau, and D'Alembert, all in the Louvre; Voltaire, the Abbé Huber, at Saint-Quentin; several of himself, two of which are in Dijon Museum. La Tour can best be studied in the Museum of Saint-Quentin, which contains 87 pieces. Many of these (so-called "preparations" or sketches for his finished pictures) are among the best of his works, since he was never satisfied and frequently spoiled his portraits by retouching them. Consult biographies by J. F. Champfleury (Paris, 1891) and J. M. Tourneux (ib., 1904); also Edmond de Goncourt, in *L'Art du dix-huitième siècle* (ib., 1880); Henry Lapauze, *Les pastels de La Tour à Saint-Quentin* (ib., 1899); Frederick Wedmore, *French Art from Watteau to Prudhon* (London, 1906).

LATOUR D'AUVERGNE, dō'vâr'ny', THÉOPHILE MALO CORRET DE (1743-1800). A hero of the French Revolution, born at Carhaix, Brittany, of an illegitimate branch of the family of the dukes of Bouillon. He entered the army in 1767 and in 1782 served under the Duke of Crillon at Port Mahon. During the early years of the Revolution Latour fought in the armies of the Alps and of the Pyrenees. Refusing all advancement in rank, he led on foot and in a simple captain's uniform his column of 8000 grenadiers, known on account of their murderous bayonet charges as the *Infanterie Célèbre*.

Having left the army in 1795, he reënlisted in 1797 as a substitute for the only son of an old friend and fought with Masséna in Switzerland. When he was subsequently with the Army of the Rhine in 1800, as he still refused all promotion, Bonaparte bestowed on him the title of The First Grenadier of France upon the request of Carnot. He was killed on June 27 of that year, at Oberhausen, near Neuburg, in Bavaria. When he died, the whole French army mourned for him three days; his heart was embalmed and placed in a silver vase carried by his company; his sabre was placed in the church of the Invalides; and at every parade till the close of the Empire, at the muster roll of his regiment, Latour's name was called, and the eldest sergeant replied, "Dead on the field of honor." This custom is still followed to-day, when the Forty-sixth Regiment takes the colors on parade.

LA TRAPPE, là trap. A narrow valley in Normandy, in the Department of Orne, closely shut in by woods and rocks and very difficult of access (Map: France, N., F 4). In these woods stands the famous Benedictine monastery of La Trappe, or La Grande Trappe, notable as the place in which the Trappist Order (q.v.) originated.

LATREILLE, la'trâ'y', PIERRE ANDRÉ (1762-1833). A French zoölogist, born at Brives, Corrèze. Although he was ordained as a priest in 1786, he devoted most of his life to the study of zoölogy. In 1798 he was placed in charge of the entomological collections at the Museum of Natural History in Paris, and in 1814 he became a member of the Academy of Sciences. After the death of Lamarck he was appointed professor of zoölogy at the Museum, the department being divided between Latreille and H. M. D. de Blainville. Latreille wrote voluminously, his works extending over the entire field of zoölogy; but it is as an entomologist, and a reformer of the prevailing systems of classification, that he was most famous. The following are among his more important works: *Précis des caractères généraux des insectes disposés dans un ordre naturel* (1796); *Histoire naturelle des singes* (2 vols., 1801); *Histoire naturelle des reptiles* (4 vols., 1802; 2d ed., 1826); *Histoire naturelle générale et particulière des crustacés et insectes* (1802-05); *Familles naturelles du règne animal* (1825); *Cours d'entomologie* (1831-33).

LA TRÉMOILLE, là trâ'mwâ'y', or **TRÉMOUILLE**, trâ'mo'y', LOUIS II DE, VICOMTE DE THOUARS, PRINCE DE TALMONT (1460-1525). A French soldier, who was known as the knight *sans reproche*. In 1488, in command of the army of Charles VIII, he defeated the rebel forces under the Duke of Brittany at Saint-Aubin du Cormier, took prisoner the Duke of Orléans, and massacred the other captives after having banqueted them. In 1495 he distinguished himself in the victory of Fornovo. By Louis XII he was placed in command of the Army of Italy. He took Milan in 1500 and was appointed admiral of Guienne (later of Brittany) and Governor of Burgundy. In 1503 he fought unsuccessfully against Gonzalvo de Córdoba in the Neapolitan territories. In 1513 he was defeated by the Swiss at Novara, in 1515 distinguished himself at Marignano, and defended Picardy against the English and Imperialists in 1522-23. He was killed at Pavia, Feb. 24, 1525. Consult Louis Sandret, *Louis II de la Trémoille, le chevalier sans reproche* (Paris, 1881).

LATROBE, là-trôb'. A borough in West-

moreland Co., Pa., 41 miles by rail east by south of Pittsburgh, on the Loyalhanna Creek, and on the Pennsylvania and the Ligonier Valley railroads (Map: Pennsylvania, C 7). It is the centre of a fertile agricultural district which has valuable deposits of coal and iron ore. Several coal mines are worked. There are large coke ovens, extensive steel mills, paper, woolen, lumber, and flour mills, and manufactories of glass, bricks, etc. The borough contains St. Vincent's Monastery, St. Xavier Convent, the Latrobe Hospital, and a high school. Pop., 1900, 4614; 1910, 8777; 1914 (U. S. est.), 10,549.

LATROBE, BENJAMIN HENRY (1764-1820). A distinguished British-American architect, descended from the Huguenot Henry Boneval de la Trobe. He was born in Yorkshire, England, studied on the Continent, achieved professional distinction as an architect in London, and in 1796 emigrated to the United States, where he became eminent both as an engineer and as an architect. Among the works with which his name is associated are the James River and Appomattox Canal, the Chesapeake and Delaware Canal, and the Schuylkill River water works in Philadelphia. He was the architect of the Bank of Pennsylvania, the Academy of Art, and the Bank of the United States in Philadelphia, and of the Roman Catholic Cathedral and the Custom House in Baltimore. In 1803 he was appointed by Jefferson surveyor of public buildings in Washington, and his advice had much to do with the plans and decorations of the capitol. He was engaged to rebuild the capitol after it was burned in 1814. In 1817 he gave up his connection with the government. His *Journal: Notes and Sketches of an Architect, Naturalist, and Traveler* was published in 1905.—His son, BENJAMIN HENRY (1807-78), likewise an engineer, was for 22 years chief engineer of the Baltimore and Ohio Railroad, and afterward was a consulting engineer of the Hoosac Tunnel and a member of the Advisory Board of the Brooklyn Bridge.—The son of the second Benjamin Henry, CHARLES HAZLEHURST (1833-1902), also an engineer, is remembered for his construction of the Arequipa Viaduct in Peru and the Agua de Vernegas Bridge in Peru and for his authoritative studies of Baltimore sewerage.

LATROBE, JOHN HAZLEHURST (1803-91). An American publicist, son of Benjamin H. Latrobe (1764-1820). He was born in Philadelphia. He became a cadet in the United States Military Academy at West Point and subsequently studied law with Robert G. Harper, of Baltimore, and was called to the bar in 1825. His services as counsel were soon engaged by the Baltimore and Ohio Railroad, with which he remained connected until his death. He was also engaged by Ross Winans in certain important litigations before the Russian courts, respecting the construction of the railroad between St. Petersburg and Moscow. The well-known "Latrobe stove" or "Baltimore heater" was his invention. Aside from his professional duties, he was conspicuous in his devotion to the welfare of Baltimore. Druid Hill Park owes much to his care. He was one of the founders and a lifelong promoter of the Maryland Institute. For many years he was president of the Maryland Historical Society. Among the advocates of African colonization he was perhaps the foremost. For the colony of Maryland in Liberia, established at Cape Palmas, he pre-

pared a charter under which a prosperous government was maintained for many years. After the death of Henry Clay he became president of the American Colonization Society. His *History of Maryland in Liberia* was published in 1885. Some of his writings relating to local history have a permanent value; as, his *Life of Charles Carroll*, *Personal Recollections of the Baltimore and Ohio Railroad*, and *History of Mason and Dixon's Line*.—His son, FERDINAND CLAIBORNE (1833–1911), was born in Baltimore, was admitted to the bar in 1860, served as mayor of Baltimore for seven terms, and was repeatedly sent to the Maryland Legislature, serving twice as Speaker of the House of Delegates.

LATRUNCULI (Lat. nom. pl., pawns, freebooters, dim. of *latro*, in older sense of 'hired soldier,' 'soldier'), or **LUDUS LATRUNCULORUM**. An ancient Roman game, played, with men of different colors, on a board divided into squares by ruled lines. The name *latrunculi* properly denotes only the men; later it was applied also to the game. The details of play are unknown, but it is certain that one object of each player was to capture his opponent's pieces by inclosing them between two of his own men. The game could thus be conceived of as a sort of combat between two armies. The pieces were of varying values: some were "officers," some "men." They were fashioned of earthenware, ivory, glass, etc. A similar game was known to the Egyptians, and boards and sets of men, with animals' heads, have been found in tombs of that country. A similar board has been found in the Mycenaean palace at Knossos in Crete. The Greeks also had two games (*perrelia*, *petteia*) played with men—one the game of "five lines," the other called "cities" ("cities" was properly the name of the squares on the board); the men were called "dogs." It seems likely that while some of the games were purely games of skill, analogous to draughts and chess, in other varieties dice were used, as in backgammon. The *ludus latruncularum* was very popular and is frequently alluded to in ancient writers. Consult the article "Latrunculi," in William Smith, *A Dictionary of Greek and Roman Antiquities*, vol. ii (3d ed., London, 1891).

LATTEN (OF. *laton*, Fr. *laiton*, from Sp. *lata*, lath, Portug. *lata*, tin plate, from OHG. *lata*, *latta*, Ger. *Latte*, Eng. *lath*; connected with Ir. *slath*, Bret. *laz*, rod, and with Ger. *Laden*, shutter). A term applied to a mixed metal made of copper and zinc and practically the same as sheet brass. The term is now seldom used and is restricted to brass worked into ornaments for ecclesiastical purposes.

LATTER-DAY PAMPHLETS. Violent and radical political tracts by Thomas Carlyle (1850).

LATTER-DAY SAINTS. See MORMONS.

LATTICE-LEAF (OF., Fr. *lattis*, from *latte*, Ger. *Latte*, lath), **LACELEAF**, **WATER YAM**, or **OUVIRANDRA**, *Aponogeton fenestralis*. A curious Madagascar aquatic plant, the older leaves of which seem to lose all their green tissue and to leave only the skeleton of the leaf. It is referred by some botanists to the family Aponogetonaceae, nearly allied to Naiadaceae, with which it was formerly classed. It has a light-brown edible rootstock, about the thickness of a man's thumb, 6 to 9 inches long, often branching, internally white and farinaceous. The crown of the plant is under water, and the leaves float just below the surface; the flowers, arranged in

forked spikes, rise above it. The young leaves, while in the bud, are not lattice-like. There are

LATTICE-LEAF.

about 20 species in this genus, which occurs in Africa, Asia, and Australia.

LATTIMORE, SAMUEL ALLAN (1828–1913). An American chemist and educator, born in Union Co., Ind. In 1850 he graduated from Indiana Asbury (now De Pauw) University, where he was classical tutor from 1850 to 1852, took the degree of A.M. in 1853, and was professor of Greek until 1860. Then for seven years he held the chair of chemistry at Genesee College, the forerunner of Syracuse University. From 1867 until his retirement in 1908 Dr. Lattimore was professor of chemistry at the University of Rochester, where he was also acting president in 1896–98. In addition to academic duties he found time to serve as chemist to the Board of Water Commissioners, Rochester (1872), to the New York State Board of Health (1881–83), and to the State Department of Agriculture (1886–1908); he helped to found the Western New York Institution for Deaf Mutes and did much to popularize the study of science. Dr. Lattimore was a fellow, and in 1880 a vice president, of the American Association for the Advancement of Science. De Pauw and Iowa Wesleyan each gave him an honorary Ph.D. and Hamilton College the LL.D.

LATTMANN, lät'mán, JULIUS (1818–98). A German educator, born at Goslar. He studied theology and philology at the University of Göttingen. From 1847 to 1870 he was a teacher in the Gymnasium at Göttingen; from 1870 to his retirement in 1890, director of that at Clausthal. Besides many schemes for linguistic reforms, he published a number of school textbooks, among them: *Kombination der methodischen Principien im lateinischen Unterricht* (1882; 2d ed., 1888); *Cornelii Nepotis Liber Emendatus et Suppletus* (1880; 8th ed., 1889); *Ausgleichende Lösung der Reformbewegungen des höheren Schulwesens* (1889).

LATUDE, lät'üd', HENRI MASERS DE (1725–

1805). A prisoner in the Bastille, born at Montagnac in Gascony. He learned the business of an apothecary, served in the army, and came to Paris to study mathematics. He lived for some time in great poverty here. In 1749 Latude informed Mademoiselle de Pompadour that an attempt would be made upon her life through poison in a package. He did not tell that he himself was the sender of the package. Mademoiselle de Pompadour found him out, refused to see the humor of the situation, and sent him to the Bastille. Having thrice escaped, he was thrice retaken, and spent 28 years in prison. Malesherbes brought about his release in 1777, but he was again arrested, charged with robbery, and kept in the Bicêtre till 1784, when he was freed through the intercession of Mademoiselle Legros. During the early years of the Revolution Latude was very popular in the character of a victim of the old régime. In 1793 the Convention compelled the heirs of Mademoiselle de Pompadour to pay him 60,000 francs damages. In 1791-92 Thierry published *Le despotisme dévoilé, ou mémoires de Latude*, which attained great notoriety.

LA TUQUE, la tùk'. A town in Champlain Co., Quebec, Canada, at the junction of the Bostonnais and St. Maurice rivers, and on the Quebec and Lake St. John Railway, about 87 miles northwest (direct) of the city of Quebec and 122 miles by rail (Map Quebec, F 3). There is steam communication with Grandes Piles by way of the St. Maurice River. The chief public buildings are the town hall, a Roman Catholic convent, a college, and a hospital. The leading industry is the manufacture of pulp, for which there is abundant water power. The town owns its electric-lighting plant. Pop. (1911), 2934.

LATUS RECTUM (Lat., straight side). In mathematics, the latus rectum of a conic section is the double ordinate of a focus, or the focal chord parallel to the directrix. Its length in the ellipse and hyperbola (q.v.) is $\frac{2b^2}{a}$ and in the parabola $y^2 = 4px$ it is $4p$, or twice the distance of the focus from the directrix. The word *δρῶλα* was used by Apollonius, but in the Latin translations it always appears as "latus rectum." Apollonius also speaks of it as the "parameter of the ordinates" (παρ' ἣν ὀδυναται αἱ καταγόμεναι τεταγμένους). See ELLIPSE; PARAMETER.

LAUBACH, HERMANN, COUNT SOLMS-. See SOLMS-LAUBACH.

LAUBAN, lou'bân. A town in the Province of Silesia, Prussia, on the Queis, at the converging of three railway lines, 40 miles west-southwest of Liegnitz (Map: Germany, F 3). It has a fourteenth-century convent of the Magdalens, a lyceum, a municipal library, and monuments to William I and Luther. Its industries include woolen, linen, and cotton weaving, bleaching, and the manufacture of earthenware, starch, dextrin, cigars, machinery, cartons, and labels. Large railway shops are located here. Pop., 1900, 13,792; 1910, 15,467. Lauban is mentioned as early as the tenth century and once belonged to the league of the six towns of Lusatia.

LAUBE, lou'be, HEINRICH (1806-84). A German novelist and dramatic author. He was born at Sprottau in Silesia and, after studying theology at Halle and Breslau, made his home at Leipzig. He aroused the hostility of the government by his participation in the liberal movement of the time and in 1834 was expelled from

Saxony and served a term of imprisonment at Berlin. After a further term of imprisonment he made a tour through France and Algeria, returning to Leipzig in 1839. He was a member of the Frankfort National Assembly (1848-49) and in 1849 became director of the Burg Theatre at Vienna, a position which he held till 1867. After a short sojourn at Leipzig (1869-70) he returned to Vienna and acted as director of the Stadt Theatre till 1879. The first period of his literary career was marked by the rapid output of novels dealing with the history of Germany as well as with contemporary social and political conditions and by his participation in the young German movement (See YOUNG GERMANY.) He also published essays and books of travel. After 1845 his attention was directed chiefly to the stage. His plays are well wrought and cleverly written and show a remarkable mastery of the technique of the stage. Of his novels, the most important are: *Das junge Europa* (1833-37); *Das Gluck* (1837); *Der Prätendent* (1842); *Die Gräfin Chateaubriand* (1843); *Der deutsche Krieg* (1863-66); *Die Böhmingen* (1880); *Louison* (1884). On the stage he first attained a reputation with his tragedy *Monaldeschi* (1845) and the comedy *Rokoko* (1846). These were followed by *Struensee* (1847), *Gottsched und Gellert* (1847), *Die Karlsschüler* (1847), *Graf Essex* (1856), *Montrose* (1859), *Böse Zungen* (1868), and *Demetrius* (1872); the last was an attempt at completing Schiller's unfinished drama of that name. Among his other works should be mentioned *Moderne Charakteristiken*, a collection of essays, and *Das erste deutsche Parlament*, an account of the revolutionary period of 1848-49. His works were published at Vienna in 16 volumes (1875-82). Consult Rudolf Gottschall, "Heinrich Laube," in *Unsere Zeit*, vol. ii (Leipzig, 1884); Johannes Proeles, *Das junge Deutschland* (Stuttgart, 1892); Ludwig Geiger, *Das junge Deutschland und die preussische Zensur* (Berlin, 1900); Georg Altman, *Heinrich Laubes Prinzip der Theaterleitung* (Dortmund, 1908); Paul Weiglin, *Gutzkows und Laubes Literaturdramen* (Berlin, 1910).

LAUD, WILLIAM (1573-1645). Archbishop of Canterbury, the upholder of Church authority in the time of Charles I. He was the son of a clothier in good circumstances and was born at Reading in Berkshire, Oct. 7, 1573. He entered St. John's College, Oxford, in 1589, became a fellow in 1593, and took his degree of M.A. in 1598. Ordained a priest in 1601, he soon made himself conspicuous at the university by his antipathy to Puritanism; but, being then a person of very little consequence, he only succeeded in exciting displeasure against himself. Yet his learning, his persistent and definite ecclesiasticism, and the genuine unselfishness of his devotion to the Church, soon won him both friends and patrons. In 1607 he was preferred to the vicarage of Stanford in Northamptonshire and in 1608 obtained the advowson of North Kilworth in Leicestershire. In 1609 he was appointed rector of West Tilbury in Essex; in 1611, in spite of strong opposition, president of St. John's College, Oxford, in 1614, prebendary of Lincoln; and in 1615, Archdeacon of Huntingdon. King James now began to show favor to Laud and in 1616 made him dean of Gloucester. In 1617 Laud accompanied his sovereign to Scotland, with the view of introducing episcopacy into the Church government of that country;

but the attempt failed. In 1621 he was consecrated Bishop of St. David's. After the accession of Charles I he was translated from the see of St. David's to that of Bath and Wells (1626), became high in favor at court, was more than ever hated by the Puritans, and was denounced in Parliament. In 1628 he was made Bishop of London. After the assassination of Buckingham Laud became virtually the chief minister of Charles and undertook to carry out the policy which he believed to be right with great firmness and persistency. It was not in accord with the spirit of the times, however, or suited to the temper of the people. In 1629 he was chosen chancellor of the University of Oxford, the centre of High-Church loyalty. From this period he was for several years busily but fruitlessly employed in trying to repress Puritanism. In the High Commission and Star Chamber courts the influence of Laud was supreme; but the penalty he paid for this influence was the hatred of the English Parliament and of the people generally. In 1633 he was raised to the archbishopric of Canterbury and in the same year was made chancellor of the University of Dublin. The famous ordinance regarding Sunday sports, which was published about this time by royal command, was believed to be drawn up by Laud and greatly increased the dislike felt towards him by the Puritans. His minute alterations in public worship, his regulations about the proper position of the altar and the fencing of it with decent rails, his attempt to force Dutch and Walloon congregations to use the English liturgy, and all Englishmen to attend the parish church where they resided, are characteristic of his principles and policy. During 1635-37 another effort was made by him to establish episcopacy in Scotland; but the first attempt to read the liturgy in St. Giles's Church, Edinburgh, excited a dangerous tumult. (See GEDDES, JENNY.) Proceedings were finally taken against him, and on March 1, 1641, he was, by order of the House of Commons, conveyed to the Tower. After being stripped of his honors and exposed to many indignities and much injustice, he was finally brought to trial before the House of Lords, Nov. 22, 1643, on a charge of treason and other crimes. The Lords, however, did not find him guilty; but the Commons had previously resolved on his death and passed an ordinance for his execution. To this the Upper House gave its assent, and, in spite of Laud's pleading a royal pardon, he was beheaded, Jan. 10, 1645. Laud had a genuine regard for learning and enriched the University of Oxford, in the course of his life, with 1300 manuscripts in different European and Oriental languages. His writings are few. Wharton published his *Diary* in 1694, and during 1857-60 Parker, the Oxford publisher, issued *The Works of the Most Reverend Father in God, William Laud, D.D., sometime Lord Archbishop of Canterbury*.

LAUDANUM (variant of *ladanum*, from Lat. *ladanum*, *ledanum*, from Gk. *λῆδανον*, *lēdanon*, resinous juice or gum of a certain shrub, from *λῆδον*, *lēdon*, mastic, from Pers. *lādan*, sort of shrub), or **TINCTURE OF OPIUM**. A fluid preparation of opium, made by macerating the sliced or powdered drug in alcohol and filtering the resultant. It is of a deep brownish-red color and possesses the peculiar nutty odor and smell of opium. Formerly it was a preparation of uncertain strength, as there was no definite rule for compounding it. But the United States pharmacopœias of 1880 and subsequent years prescribed that all fluid preparations of opium, except paregoric, should be made of such strength that 10 minims of it should represent one grain of opium. Laudanum therefore contains 48 grains of opium to the ounce. It is a powerful analgesic and hypnotic, but it causes constipation, headache, and occasionally nausea. It is too frequently used as a domestic medicine for the relief of pain, especially in cases of cramps or diarrhoea, when in the majority of cases a brisk cathartic is indicated. To young children it must be given with extreme caution, as fatal results have followed a very small dose administered to an infant for relief of supposed pain, or as a "soothing" agency. The drug is used in widely varying doses in adults, according to the indications, as interpreted by the physician. Laudanum is less used now than in former years, the active principles of opium, such as morphine and codeine, being substituted. As a local application, however, in the form of a liniment, particularly in combination with lead, it is still extensively employed. See **ANTI-DOTE, OPIUM**.

LAUDER, HARRY (real name MACLENNAN) (1870-). A Scottish comedian, born at Portobello. As a child, he worked in a flax-spinning mill in Arbroath, where he was educated as a half-timer, and then, for 10 years, in coal mines. Having managed during this time to acquire some knowledge of music, he early gained a local reputation as an amateur vocalist and entertainer, and finally, adopting the stage as a profession, made tours in Scotland and Ireland. His first notable success was at Belfast in an Irish character song, "Call Ager! Callaghan." In the London music halls he at once became a prime favorite, and in America, which he visited for the first time in 1907, he created a real sensation with his songs and characterizations. Thereafter he made frequent tours in the United States, with undiminished popularity. In the impersonation of Scottish characters, a field to which he finally confined himself exclusively, he had no rival. In 1915, with a company of bagpipers, he traveled through England to help raise recruits for the war. He is author of *Harry Lauder at Home and on Tour* (1906) and of a Scottish comedy, besides both words and music of his songs.

LAUDER, SIR THOMAS DICK (1784-1848). A Scottish author, eldest son of Sir Andrew Lauder, sixth Baronet of Fountainhall, Haddingtonshire, Scotland. For a short time he served in the Seventy-ninth Regiment (Cameron Highlanders). On the death of his father, in 1820, he succeeded to the baronetcy. For several years he was secretary to the Board of Scottish Manufacturers and to the Board of White Herring

Fishery. He became known as the author of several romances written in imitation of Scott—*Simon Roy* (1817), *Lochindhu* (1825), and *The Wolf of Badenoch* (1827). The scenes of the last two are laid in Morayshire, just before the wars of Bruce. Later in life he published *Highland Rambles and Legends* (3 vols., 1837) and *Legends and Tales of the Highlands* (3 vols., 1841). His only work now read is the *Account of the Great Moray Floods of 1829* (1830). This has survived for its graphic descriptions, its humor and pathos. He died May 29, 1848. A series of papers written during the last two years of his life for *Tait's Magazine* and entitled *Scottish Rivers* was edited with a preface by Dr. John Brown (Edinburgh, 1874).

LAUDER, WILLIAM (?-1771). A Scottish Latinist and impostor. Educated at Edinburgh University, he became a tutor there after graduation in 1695, but was unsuccessful in several attempts to obtain a collegiate appointment. He was a good Latin scholar and published *Poetarum Scotorum Musæ Sacræ* (2 vols., 1739), a collection of Latin poems, mostly paraphrases from the Bible, by Arthur Johnston, Ruddiman, Ker, and others; the circulation of the collection, however, was damaged by Lauder's injudicious praise of Johnston. He went to London in 1742 and supported himself by teaching and literary work. In 1747 he commenced the series of articles in the *Gentleman's Magazine* by which he is remembered, owing to his indictment of Milton for plagiarism. By his quotations and his plausibility he deceived even Dr. Samuel Johnson and received subscriptions for the publication of an *Essay on Milton's Use and Imitations of the Moderns in his "Paradise Lost"* (1750), to which Dr. Johnson wrote a preface and postscript. The publication of a more extended work on the subject by Lauder was arrested by John Douglas, afterward Bishop of Salisbury, who exposed Lauder's fraud, showing that he had cited excerpts from Alexander Hog's Latin translation of *Paradise Lost* as plagiarisms by Milton from Grotius, Masenius, Staphoristius, and others. Dr. Johnson obtained Lauder's confession of the forgery, notwithstanding which Lauder continued his attack on Milton and published *The Grand Impostor: or King Charles I Vindicated from the Charge of Plagiarism Brought against him by Milton, and Milton himself Convicted of Forgery* (1754). Lauder was finally obliged to emigrate to Barbados, where he died in poverty.

LAUDERDALE, JAMES MAITLAND, eighth EARL OF (1759-1839). A Scottish statesman and author, born at Ratho, Midlothian. He was educated at the University of Edinburgh, studied also at Trinity College, Oxford, and at Glasgow, read law at Lincoln's Inn, London, and became advocate in 1780. In that year he was also returned to the House of Commons for Newport, Cornwall. From 1784 to 1789 he sat for Malmesbury, in 1787 was appointed a manager for the conduct of the impeachment of Warren Hastings, and in 1790 was elected a representative peer of Scotland. While a member of the Commons, he spoke against the persons who were responsible for the American war. He was strongly opposed to the French war and is said to have made his appearance in the Lords on one occasion in the garb affected by the Jacobin organization. His attitude towards the ministry prevented his reelection in 1796 and 1802, but in 1806 he became a peer of Great Britain

and Ireland (Baron Lauderdale of Thirlestane, Berwick), Lord High Keeper of the Great Seal of Scotland, and a member of the Privy Council. He resigned in 1807, was long prominent in the Opposition in the House of Lords, and the leader of the Scottish Whigs. Ultimately, however, he became a Tory. His attack (with the Duke of Bedford) on the pension of Burke was answered by Burke in the well-known *Letter to a Noble Lord* (1796). His writings include an *Inquiry into the Nature and Origin of Public Wealth* (1804, 2d enlarged ed., 1819; trans. into Italian and French) and a considerable list of pamphlets. A volume of his *Letters to the Peers of Scotland* was published in 1794.

LAUDERDALE, JOHN MAITLAND, DUKE OF (1616-82). A Scottish politician, the grandson of John, first Lord Thirlestane, brother of the famous Secretary Lethington, and son of John, first Earl of Lauderdale, and of Isabel, daughter of Alexander Seaton, Earl of Dunfermline and Chancellor of Scotland. He was born at the ancient family seat of Lethington, May 24, 1616. He was carefully trained in Presbyterian principles and entered public life as a keen Covenanter. In 1643 he attended the Westminster Assembly of Divines as an elder of the Church of Scotland and was a party to the surrender of Charles I to the English army at New-castle. Shortly after, however, he changed his politics and became a Royalist. When Charles II came to Scotland from Holland, Lauderdale accompanied him, but, being taken at the battle of Worcester in 1651, was kept a prisoner for nine years. Set at liberty by General Monk in 1660, he hastened to The Hague and was warmly received by Charles. After the removal of Middleton in 1662 and of Rothes in 1667, Lauderdale was practically the sole ruler of Scotland and for some time displayed a spirit of moderation and an apparent regard for the religious feelings of his countrymen; but he soon became a bitter persecutor of the Covenanters. In 1672 Charles showed his appreciation of Lauderdale's conduct by creating him Earl of March and Duke of Lauderdale; two years afterward he was raised to the English peerage as Baron Petersham and Earl of Guilford and received a seat in the English Privy Council. He was one of the famous "cabal," but by his domineering arrogance excited the disgust and hatred of his colleagues as well as of the nation. The House of Commons repeatedly petitioned for his removal, and finally, in 1682, after his health had been broken by constant excesses and he had lost the favor of the King by his vote for the execution of Lord Stafford, he was stripped of his offices and pensions. He died at Tunbridge Wells, August 24 of the same year. Consult articles by Osmud Airy in the *Quarterly Review*, vol. clvii (London, 1884); in the *English Historical Review*, vol. i (ib., 1886); and a selection from the 36 volumes of Lauderdale manuscripts in the British Museum, edited by Osmud Airy for the Camden Society in four volumes (ib., 1883-85).

LAUDIAN MANUSCRIPT (CODEX LAUDIANUS). A valuable manuscript of the Acts of the Apostles, named after Archbishop Laud, who in 1636 presented it to the University of Oxford. It has in parallel columns and uncial letters the Greek text with a closely literal Latin version, different both from the Vulgate and from Jerome's. The Latin words are always exactly opposite the Greek. The portion from xxvi. 29 to xxvii. 26 has been lost. The vellum

is inferior and the ink pale. It was probably written in the west of Europe and about the sixth century. It is now in the Bodleian Library and is numbered 35. It is listed by Gregory as E, by Von Soden as a 1001. It was published by Thomas Hearne (1715), by Hansell (1864), and by Tischendorf (1870). For description, consult C. R. Gregory, *Canon and Text of the New Testament* (New York, 1907).

LAUDON, lou'dôn, or **LOUDON**, GIDEON ERNST, BARON VON (1717-90). An Austrian general, born at Tootzen, Livonia, of an old Scottish family. After serving in the Russian army (1732-39) he went to Austria in 1742 and rose to be colonel at the outbreak of the Seven Years' War. Within a year his services raised him to the rank of major general. He was present at the battles of Rossbach and Hochkirch, and in 1759 his forces with those of the Russian General Soltikoff overwhelmed the army of Frederick the Great at Kunersdorf. He won further victories at Glatz and Landshut. He became Baron (1758) and Aulic Councilor (1766). In 1769 he was commandant general in Bohemia and in 1778 became field marshal. In the Turkish War of 1788-89 he captured Belgrade. In 1790 he was made generalissimo. Consult Janko, *Leben des Feldmarshalls von Laudon* (Vienna, 1869).

LAUDONNIÈRE, lô'dô'nyâr', RENÉ DE (?-c.1586). A French navigator of the sixteenth century. In 1562 he was with Ribaut when the latter made his unsuccessful attempt to establish a Huguenot colony at Port Royal in South Carolina, and two years later was dispatched at the head of a second expedition to the New World. On June 25, 1564, he arrived off the mouth of the St John's River, Florida, and, sailing up the river for a distance of 12 miles, began the erection of a fort, which he named Caroline in honor of Charles IX. Laudonnière's management involved the colonists in quarrels with the Indians, upon whom they were dependent for supplies. Some of the number, mostly impoverished gentlemen, who resented the hard labor to which they were put, revolted against the rule of their leader and forced him to sanction a marauding expedition to pillage the Spanish settlements in Cuba. Affairs went from bad to worse, and the colony was threatened with destruction for want of food. On Aug. 3, 1565, Capt. John Hawkins, the celebrated English slaver and privateer, arrived off the mouth of the river and supplied the colonists with provisions, selling them also one of his ships, on which Laudonnière intended to return to France. On August 29 Jean Ribaut arrived with seven ships and some 300 men and superseded Laudonnière in the command, the latter being ordered home to defend himself against accusations of tyranny and treason. His departure for France was delayed by the appearance of a Spanish fleet under Menéndez de Avilés, which had been dispatched for the purpose of driving out the French. On September 10 Ribaut set out in his ships to attack the Spaniards at St. Augustine, leaving Laudonnière in command at the fort. About 10 days later Menéndez de Avilés stormed the fort, and a massacre of the colonists ensued. Laudonnière succeeded in effecting his escape. With the rest of the survivors of the massacre he was rescued by the remnant of the French fleet. He went to England and did not return to France until 1566. Twenty years later he published *L'Histoire notable de la Floride, contenant les trois*

voyages faites en icelle par des capitaines et des pilotes français, translated in Hakluyt's *Principal Navigations* (1589) and in French's *Historical Collections of Louisiana*. The last-named book also contains other original documents relating to this episode, which is fully treated in Francis Parkman, "Pioneers of France in the New World," in *France and England in North America*, part i (Boston, 1898). See MENÉNDEZ DE AVILÉS; RIBAUT.

LAUENBURG, lou'en bōrk. A town in the Circle of Lauenburg, in the Province of Schleswig-Holstein, Prussia, situated on the Elbe at its confluence with the Trave Canal, 25 miles southeast of Hamburg (Map: Germany, D 2). The chief buildings are the Evangelistic Church, two asylums for widows, and the courthouse. Lauenburg is an important commercial centre. The chief industry is shipbuilding and there are manufactures of matches, barrels, bricks, and beer. In 1911 the ferry over the Elbe was replaced by a railway bridge. Pop., 1900, 5346. The castle after which the Duchy of Lauenburg was named was built in 1181 by Duke Bernhard of Saxony.

LAUENBURG. A circle in the Province of Schleswig-Holstein Prussia (Map: Germany, D 2). Area, 455 square miles, pop., 1910, 54,571. The district is productive and well forested. Agriculture and cattle raising are the chief industries. There are numerous lakes. Lauenburg was inhabited by Slavic tribes when Charles the Great conquered it in 804. It formed part of the Duchy of Saxony, and in 1263 became a separate state, ruled by the dukes of Saxe-Lauenburg. This line became extinct in 1689, when a number of princes contested the succession. Finally, in 1702, Lauenburg acknowledged the dominion of the Elector of Hanover. In 1803 it passed to France. In 1815 Denmark obtained possession of it, and it was united with Holstein in 1863, and passed to Prussia and Austria after the War of 1864. By the Convention of Gastein of 1865 Austria gave full possession to Prussia, and the latter has possessed it since that time. It has been a circle of Schleswig-Holstein since 1876. In 1890, when Bismarck retired from office, William II conferred upon him the title of Duke of Lauenburg. Bismarck's main estate (Friedrichsruh) is within the limits of the old duchy.

LAUENBURG, lou'en-burk. A town in the Province of Pomerania, Prussia, situated on the Leba, 38 miles northwest of Danzig (Map: Germany, G 1). There are manufactures of woolen and linen cloth and of white and common leather, matches, stoves, cement bricks, lumber, machinery, and spirits. It makes good sparkling wine and has a considerable trade in cattle. Pop., 1900, 10,436; 1910, 13,916.

LAUFENBERG, HEINRICH VON. See HEINRICH VON LAUFENBERG.

LAUFER, lou'fēr, BERTHOLD (1874-). An American anthropologist and Orientalist, born at Cologne, Germany. He was educated at the University of Berlin (1893-95), at the Seminary for Oriental Languages, Berlin (1894-95), and at the University of Leipzig (Ph.D., 1897). Coming to the United States in 1898, he participated in the Jesup North Pacific expedition to Sakhalin Island and eastern Siberia (1898-99), in the Jacob H. Schiff expedition to China (1901-04), and in the Mrs. T. B. Blackstone expedition to China and Tibet (1908-10). He was an assistant at the American Museum of

Natural History (1904-06), lectured at Columbia University (1905-07), and at the Field Museum of Natural History he became assistant curator of the Eastern Asiatic department in 1908 and associate curator of Asiatic ethnology in 1911. He wrote a *Descriptive Account of the Collection of Chinese, Tibetan, Mongol, and Japanese Books in the Newberry Library* (1913).

LAUFF, JOSEPH VON (1855-). A German dramatist and novelist. He was born in Cologne, attended school at Kalkar and Münster, where he finished the course in the Gymnasium, entered the artillery in 1877, became lieutenant in 1878, captain in 1890, and major in 1898. At the personal request of the Emperor, in 1898, he became dramatic critic of the Royal Theatre at Wiesbaden, a position in which he continued till 1903. In 1886 he had begun his literary career with some mediocre epics, turning then to novels, of which he wrote: *Die Heise* (1892; 6th ed., 1900); *Regina cæli* (1894; 7th ed., 1904); *Die Hauptmannsfrau* (1895; 8th ed., 1903); *Der Mönch von St. Sebald* (1896; 5th ed., 1899); *Im Rosenhag* (1898; 4th ed., 1900); *Karrekiek* (1902; 8th ed., 1906); *Marie Verwohnen* (1-6 eds., 1903); *Pittje Pittjewitt* (1903; 14th ed., 1907); *Frau Alet* (1905; 14th ed., 1912); *Die Tanzmamsell* (1907); *Sankt Anna* (1908); *Kavelaer* (1910); *Lux aterna* (1912; 11th ed., 1913). Of these his *Karrekiek* (dramatized by himself in 1902, *Der Heerohm*) and *Pittje Pittjewitt* are by far his best. Of his dramas—*Inez de Castro* (1894; 3d ed., 1895), *Der Burggraf* (1897; 6th ed., 1900), *Der Eisenbahn* (1899; 2d ed., 1902), *Ruschhaus* (1900), *Vorwärts* (1900), *Der Deichgraf* (1907), *Gotberger* (1907), and *Heerohm* (1902)—the last is by all means the best. Some of these are said to have been written at the suggestion of William II. In his epics he follows but fails to equal Julius Wolff; in his dramas he is an unsuccessful disciple of Ernst von Wildenbruch; but in those stories and novels that picture the life and people of the lower Rhine he has been deservedly successful. But for the most part his talent lies in form. He was ennobled in 1913. Consult: A. Schroeder, *J. Lauff* (Wiesbaden, 1898); Bruno Sturm (B. Breitner), *J. Lauff* (Vienna, 1903); K. Pagenstecher, in *Nord und Süd* (Breslau, 1904); also article in Westermann's *Monatshefte* (Brunswick, July, 1905); and W. Muller-Waldenburg, *J. Lauff* (Stuttgart, 1906).

LAUGÉE, lô'zhâ', DESIRÉ FRANÇOIS (1823-96). A French historical, genre, and portrait painter. He was born at Maromme (Seine-Inférieure), and was a pupil of Picot and of the Ecole des Beaux-Arts. He began with portraits and historical genre, then turned to delineations of popular life, and finally to religious paintings. Although his draftsmanship is excellent, his color is poor, and he lacks power and temperament. Among his most noteworthy works are: "Assassination of Rizzio" (1849), Amiens Museum; "Death of Zurban" (1850), Ministry of the Interior; "Lesueur with the Carthusian Monks" (1855), acquired by the state; "St. Louis Washing the Feet of the Poor" (1863), Ministry of State; "Baptism of Clovis" and "St. Clotilde Helping the Poor" (1870), mural paintings in the church of St. Clotilde, Paris; "Candle of the Madonna" (1877), acquired by the state; "Triumph of Flora" (1879), decorative painting in the Hotel Continental, Paris; "The Servant of the Poor" (1880). Lille Museum;

"Victor Hugo on his Deathbed" (1886); "Palm Sunday" (1892), "Interior," Luxembourg; "Martyrdom of St. Denis," mural painting in the church of the Trinity; besides several decorative works in other churches and in the Exchange in Paris. He was awarded medals in 1850, 1855, 1859, 1861, and 1863, and decorated with the Legion of Honor in 1865.—His son **GEORGES** (1853-), a genre painter, studied under the father and also under Pils and Henri Lehmann. His cleverly composed works include such subjects as "Repast of the Mowers" (1877), "Poor Blind Man" (1881), and "The First-Born" (1883).

LAUGEL, lô'zhêl', AUGUSTE (1830-). A French author, born in Strassburg. He was early a mining engineer and afterward became secretary to the Duc d'Aumale. His works, on scientific, historical, and philosophical subjects, include: *Etudes scientifiques* (1859); *Science et philosophie* (1862); *L'Angleterre politique et sociale* (1873); *Grandes figures historiques* (1875); *Lord Palmerston et Lord Russell* (1876); *Louis de Coligny* (1877); *La France politique et sociale* (1877); *Henri de Rohan* (1889); etc. In 1912 he published a volume of poetry, *Flammes et cendres*.

LAUGERIE BASSE, lôzh'rê' bâs. A famous prehistoric station in the valley of the Vézère, Dordogne, France. See PALEOLITHIC PERIOD.

LAUGHING GAS. See ANÆSTHETIC; NITROGEN; NITROUS OXIDE.

LAUGHING GULL. A rather small American gull (*Larus atricilla*), so called from its hallooing cry. It is gray on the back and white beneath, with head black in mature summer plumage and feet reddish. Its home is in the tropics, from the Amazon northward; but in summer it strays up both coasts of America to Maine and central California. It is very numerous on the South Atlantic and Gulf coasts, breeds on sandy islets and beaches from Virginia southward, and rarely goes inland. Consult Elliott Coues, "Birds of the Northwest," in *United States Geographical and Geological Survey of the Territories, Miscellaneous Publications*, vol. iii (Washington, 1874), and Beebe, *Annual Report New York Zoological Society* (New York, 1903).

LAUGHING JACKASS, or KOOKABURRA. See DACELO.

LAUGHING PHILOSOPHER, THE. A title given to Democritus (q.v.).

LAUGHLIN, lâf'lin, JAMES LAWRENCE (1850-). An American economist, born at Deerfield, Ohio. In 1873 he graduated with high honors at Harvard, where he took his Ph.D. degree three years later, and where he was instructor in political economy (1878-83) and assistant professor (1883-87). From 1887 to 1890 he was president of the Manufacturers' Mutual Fire Insurance Company of Philadelphia, for two years he was professor at Cornell, and in 1892 he became head of the department of political economy at the University of Chicago. He was a member of the Indianapolis Monetary Commission, organized in 1897, and prepared its report, one of the important documents in the history of American banking and monetary reform. In 1906 he lectured, by invitation, in Berlin, and in 1909 he served as delegate to the Pan-American Scientific Congress at Santiago, Chile. From 1911 to 1913 he was chairman of the Executive Committee of the National Citizens League for the Promotion of

a Sound Banking System. Under his efficient leadership the league contributed materially to removing the inertia and prejudice that had blocked the way to banking reform in the United States. Beside editing the *Journal of Political Economy* (after 1892), he prepared an abridgment of Mill's *Political Economy* (1884) and wrote: *The Study of Political Economy* (1885); *History of Bimetallism in the United States* (1886); *Elements of Political Economy* (1887; rev. ed., 1902); *Facts about Money* (1895); *Principles of Money* (1903); *Reciprocity* (1903), with H. P. Willis; *Lectures on Commerce* (1904); *Industrial America* (1906); *Latter Day Problems* (1909); *Banking Reform* (1912).

LAUGHTER (AS. *hleahtr*, from *hlæhhan*, Icel. *hlæja*, Goth. *hlahjan*, OHG. *Alahhan*, *lahhan*, Ger. *lachen*, to laugh; probably imitative in origin). A form of expression (q.v.) of certain emotions. In the smile, which genetically is probably a feeble successor of the laugh, the corners of the mouth are drawn upward and backward, and the cheeks are raised, by the contraction of the great zygomatic muscles; the upper lip is slightly raised; the upper and lower eyelids are somewhat approximated by the contraction of the orbicular muscles; and the eyes are brightened in consequence of their greater tenseness, which results from these muscular contractions or from the increased blood pressure within the eyeball. The "graduation" of the smile into the laugh is characterized by the enhancement and spread of the motor phenomena; the mouth is opened; there are deep inspirations, followed by short, spasmodic, expiratory movements, especially of the diaphragm; and the vocal cords are contracted, giving the typical sounds of laughter. In violent, spasmodic laughter the respiratory disturbances are increased; there are also circulatory changes (quickened pulse, congested face); glandular secretion (secretion of tears); distortions of the whole body, usually a throwing back of the head and a curving backward of the trunk; and involuntary and purposeless movements of the limbs.

The causes of laughter are not always easy of assignment. It seems to be primarily the expression of mere joy or happiness (notably in the case of children), yet it may be incited by what seem to be purely physiological agencies, e.g., tickling, cold, hysteria, and even some kinds of acute pain. The theories of laughter fall therefore into two classes—those that regard laughter as the expression of joy and those that regard as typical the laughter which follows tickle. Psychologically the characteristic of the former kind of laughter is the presence of a pleasurable emotion; if the situation fails to arouse the emotion, laughter does not occur. But there is disagreement as to the way in which laughter is brought about. Some authorities hold that the display of muscular excitement is to be explained in terms of the discharge of energy through the pathways of the nervous system. Laughter, it is said, may be produced by strong feeling of almost any kind; its movements are purposeless and thus symptomatic of uncontrolled nervous discharge. The overflow takes place along the easiest and most used routes, i.e., to the facial, articulatory, and respiratory muscles. Another type of theory attempts to trace the development of laughter genetically. The first semblance of laughter is found in the mimetic movements which express pleasure in

a sweet taste, or in the repetition by the replete child of the pleasurable act of sucking. The organic accompaniment (increased heartbeat, respiratory change, etc.) appears only when the pleasurable emotion has reached a certain degree of intensity, and it differs from other organic disturbances in that it is intermittent; laughter is spasmodic. This theory is obviously the better of the two, since it reduces laughter to an expressive movement (see **EXPRESSION**, **EXPRESSIVE MOVEMENTS**), and thus places it in a system along with all other expressive movements. The theories of the second class, those which regard as typical the laughter which follows tickle, start with an explanation of the well-known fact that tickle, when prolonged, arouses a widespread organic reaction.

(1) It is argued that, since tickle consists of intermittent light pressures, every such pressure sets up a reflex constriction of the small arterial blood vessels, which in turn diminishes the amount of blood pumped through them by the action of the heart. But there is a close connection between the nerves governing the blood vessels and the nervous centre which regulates breathing. Hence the intermittent arterial constriction is paralleled by an intermittent expiration, and we thus account for the intermittent character of laughter. This theory, however, has been criticized on the ground of the disproportion between the intensity of the stimulus and the resulting disturbance in consciousness, an objection which is met (2) by the hypothesis that there is a summation of intensities in the nervous centres. (3) The reflex response is also held to be a survival from some ancestral instinct; tickle is perhaps a relic of "anticipatory touch," and, as such, it necessarily possesses lively reflexes; for, when danger was announced only by contact, strong reactions of escape or resistance were necessary. (4) Again, the reflex disturbance of tickling is said to be conditioned not upon the peculiar characteristics of the initiatory sensation, but upon the mental attitude or disposition in which such sensations are received. Darwin, e.g., finds surprise or novelty to be the all-important factor, and thus reduces the tickle reflex to the expression of an emotion. Numerous objections may be found to these theories, although it is enough, perhaps, to point out that no one of them offers an explanation of the mimicry of laughter. Unfortunately, also, no theory has yet been proposed which is able to connect the one kind of laughter with the other. Laughter cannot always be regarded as the expression of joy, because tickle is often indifferent or even disagreeable. If we might assume that, at some time in the history of the race when sensitivity was less than it now is, tickle was always highly pleasant, then the laughter of tickle might be regarded as a survival. But there is little ground for such an assumption.

Another important problem is the determination of the nature of the situation which ordinarily gives rise to the expressive movements of laughter or, in other words, of the nature of the comic. Here, again, there is no want of theories. There are, first of all, what may be called theories of *degradation*. It is said that the joy of laughter results from a feeling of superiority when the object is placed in a ridiculous or grotesque position. We laugh at the dignified person who slips and falls. Some authors hold that the lapse from dignity is in

itself provocative of laughter, and that the feeling of superiority is not necessarily in question. Still others would say that the incongruity of the situation (Spencer's "descending incongruity") arouses the emotion. Secondly, there are theories of contrast. It is held that degradation implies a maliciousness which in reality is foreign to the spirit of laughter; it is enough to perceive some "unexpected incongruity." Schopenhauer, e.g., would say that the sight of the dignified person prone on the ground does not comport with our conception of dignity, in all other respects, however, the sufferer is still dignified; and the perception of the contrast makes us laugh. Bergson thinks that mirth results from the contrast between the stiffness of a mechanism and the suppleness of life, a man in falling obeys mechanical laws, while we expect him to be agile enough to keep his feet. Other authorities hold that "disappointed expectation" alone is enough to provoke laughter; we expect a man to stand upright, and when he fails to do so we laugh. It has also been pointed out that, just as we cannot contrast two things without turning first to the one and then to the other, so in the laughable situation there is oscillation between two ideas; we see the individual first as dignified, then as undignified, etc. This principle is offered in explanation of the spasmodic character of laughter and has been attached to the general theory of contrast. Finally, we may mention a view which finds the key to the laughable situation in the release of submerged (chiefly sexual) complexes. It is clear that, ingenious as any of these suggestions are, and wide as is the range of comic incident that they cover, we yet have, at present, no satisfactory psychology of the comic.

Bibliography. LAUGHTON, la'ton, SIR JOHN KNOX (1830-1915). English writer on naval history, born in Liverpool and educated at the Royal Institution School, Liverpool, and at Cambridge. In 1853 he became an instructor in the navy. During the Russian War he served in the Baltic (1854-55) and in China during the second war (1856-59), in both instances with distinction. From 1866 to 1873 he was naval instructor at Portsmouth, and after 1885 he held the chair of modern history in King's College, London. In 1882-84 he served as president of the Royal Meteorological Society; in 1890 he was made an honorary fellow of Caius College, Cambridge; and Oxford and Cambridge gave him honorary degrees respectively in 1904 and 1913. Among his numerous books should be noted: *Physical Geography in its Relation to the Prevailing Winds and Currents* (1870); *A Treatise on Nautical*

Surveying (1872); *Studies in Naval History* (1887); *Nelson and his Companions in Arms* (1896); *Sea Fights and Adventures* (1901). His editorial work includes: *Letters and Dispatches of Lord Nelson* (1886); *Memoirs Relating to Lord Torrington* (1889); *Defeat of the Spanish Armada* (1894); *From Howard to Nelson—Twelve Sailors* (1899); *Recollections of Commander J. A. Gardner* (1906); *The Barham Papers* (3 vols., 1907-10).

LAUGIER, lô'zhyâ', AUGUSTE ERNEST PAUL (1812-72). A French astronomer. He was born in Paris and studied at the Ecole Polytechnique and at the observatory under Arago. He was elected member of the Academy of Sciences in 1843 and was afterward attached to the Bureau of Longitudes. He was especially well known for his work on the sun spots and on the solar equator; wrote *Recherches sur la rotation du soleil autour de son centre de gravité* (1841), *Découverte d'une nouvelle comète* (1842), *Sur les taches du soleil* (1842), *Recherches sur le pendule* (1845), *Sur la construction d'un cercle méridien portatif pour la détermination des positions géographiques* (1852); and contributed to the *Comptes rendus* of the Academy of Sciences.

LAULNE. See LAUNE.

LAUMONTITE (named in honor of its discoverer, Laumont). A hydrated calcium aluminum silicate that crystallizes in the monoclinic system. It is transparent or translucent (becoming opaque and pulverulent on exposure), with a vitreous lustre that is pearly on the faces of cleavage and white to yellowish gray and sometimes red in color. Laumontite occurs in cavities in amygdaloid, porphyry, syenite, trap, gneiss, and sometimes in veins in clay slate. The principal localities are the Faroe Islands, Greenland, Bohemia, Switzerland, the Hebrides, Nova Scotia, and in the United States at Phippsburg, Me., Bergen Hill, N. J., and the northern shore of Lake Superior. It is classed with the zeolites.

LAUN, loun, FRIEDRICH. The pseudonym of the German novelist Friedrich August Schulze (q.v.).

LAUNAY, EMANUEL LOUIS HENRI DE. See ANTRAIGUES, COMTE D'.

LAUNCESTON, lan'ston or lan'ston. Until 1838 the capital of Cornwall, England, on the Kensey, a tributary of the Tamar, 21 miles northeast of Bodmin (Map: England, B 6). It is a very old town, prominently associated with the history of Cornwall, and has remains of a Norman castle given by the Conqueror to the Earls of Moreton, in which George Fox, the Quaker, was imprisoned in 1656 for distributing tracts. The White Hart Hotel contains a fine Norman gateway, the sole relic of a famous priory of Augustinian canons. The old Cornish name for the town was Dunheved, and under that title it received its charter in 1555. The town owns a fine water supply, profitable markets, a public library, and sewage farm. Its grammar school dates from the reign of Edward VI. Pop., 1911, 4117.

LAUNCESTON. The second city of Tasmania, the capital of Cornwall County, and the chief port of entry and mart of trade for the north of the island (Map: Tasmania, D 2). It stands at the junction of the North Esk and the South Esk, at the head of navigation of the Tamar, a tidal river, which, after a course of 40 miles, enters Bass Strait (q.v.) at Port Dal-

rymple. It is 133 miles by rail from Hobart, the capital. It is accessible to ships of 4000 tons, and vessels of 2000 tons can lie alongside the wharves. It carries on a thriving commerce with Victoria and South Australia. The United States has a resident consular agent. It owns its water works, was incorporated in 1858 and as a city in 1889. The chief buildings are the town hall, the post office, customhouse, and the Albert Hall. The city has a technical school and a school of mines, a good art gallery, and a number of fine churches. About 35 miles southeast rises Ben Lomond to the height of 4500 feet. Pop., with suburbs, 1901, 21,153; 1911, 23,726.

LAUNCH (OF. *lanchier*, *lancier*, Fr. *lancier*, It. *lanciare*, to hurl as a lance, from Lat. *lancea*, lance). The largest boat carried by a man-of-war; there are both steam launches and sailing launches. Large launches, 40 to 60 feet long, are carried by battleships and large armored cruisers. They are designed for use as picket or vedette boats, to guard against surprise by torpedo boats; and they are as fast as strength and limited size permit, some steaming 18 or 19 knots on trial. The sailing launch is a sloop-rigged boat, of very strong build, with a square stern and considerable depth and breadth of beam. Sailing launches, as now supplied to large ships of the United States navy, are of two types—one is propelled by oars or sails and the other by gasoline or heavy-oil (Diesel type) engines. These "motor-sailing launches," as they are called, have quite revolutionized the carrying of men and stores to and from ships. They are 32 to 45 feet long, have a speed of five to eight knots, are the best sea boats in the ship, and, as the engines are light and take up little space, they can carry nearly as many men or as great a quantity of stores as the ordinary sailing launch.

wooden blocks, placed 6 or 7 feet apart, and built up 3 or more feet from the ground, the tops of which lie in a line which slopes downward to the water at an angle of about five-eighths of an inch to the foot. The whole ship, therefore, when it is finished, slopes downward with this inclination and rests upon the blocks just mentioned and upon suitable timber shores. When the vessel is ready for launching, "ways" of timber and planking are laid down parallel to the keel, and at some little distance on each side of it, under the bilges of the ship; they extend into the water a considerable distance below high-water mark. A "cradle" is then built under the ship, of which the bottom is formed of smooth timbers resting upon the ways. Before launching, the under sides of these timbers and the upper sides of the ways are well greased, and the weight of the ship is transferred from the keel blocks to the cradle and ways. Timbers, called dogshores, are placed so as to resist the tendency of the ship to slide down until the right moment. When this arrives, at high water, the ceremony of launching and naming the ship takes place; the dogshores are knocked away, and the vessel glides stern-foremost into the water. As soon as the water removes the weight of the vessel from the cradle, the latter breaks up into pieces. Many large battleships and some other vessels have been built in dry docks and floated out when ready, instead of being launched. This system is economical, if the dry docks are not needed for other purposes. On the Great Lakes the practice of launching ships sidewise is very common. In the case of large vessels it is now not unusual to replace the dogshores by hydraulic apparatus and to fit hydraulic jacks at the head of the ways to insure the starting of the cradle when the holding gear is released.

LAUNDRY MACHINERY AND INDUSTRY

SECTIONAL VIEW OF MANGLE.
1. Feed box. 2. Cover rolls. 3. Steam closets. 4. Scraper. 5. Discharging table.

LAUNCH, LAUNCHING. The process of removing a vessel from the land to the water. The keel of a ship is laid upon a series of (from ME. *launder*, *launder*, *lander*, washer-woman, from OF. *lavendier*, *lavandier*, washer-man, from Lat. *lavandus*, gerundive of *lavare*,

to wash). The mechanical appliances used in steam laundries include the wheeled truck for carrying the clothes from one machine or appliance to another, the washing machine, the drying apparatus, mechanical sprinklers, starching machines, and, in addition to the mangle and ordinary ironer, a multitude of specially shaped machines for ironing sleeves, collars, and cuffs, for finishing the edges of collars, and for fluting ruffles.

The quality of water used in a laundry is of great importance. If the water is hard, muddy, or colored, a special plant for softening or filtering may be necessary. A large amount of steam is required, both for motive power and for heating the water. In a large laundry or in a hospital the disinfector is the first consideration and is a most important appliance. Here in a jacketed container of steel the clothes are submitted under a partial vacuum to high-

wringer, then placing them in a centrifugal dryer; or the entire operation may be performed in a hydro-extractor revolving at high speed. (See DRYING MACHINES.) The drying in the largest laundries as well as in well-equipped smaller plants is usually done in an artificially heated drying room or drying closets. These are of various forms and degrees of elaboration, with careful provision for heating and the circulation of air by mechanical draft, as the moist vapor-laden air must be withdrawn and dry air driven in to take its place. This is accomplished by power-driven fans. The handling of the clothes is also effected mechanically in certain installations. The arrangement of closets, horses, etc., varies with the size and nature of the plant. *Ironing machines*, though of many different forms, generally operate upon the same principle, which is that of the calender. (See CALENDERING.) A hard surface or

POWER WASHING MACHINE.

pressure steam at a temperature exceeding 300° F. The steam is then conducted to the fire of the boiler where it was generated. The clothes are then subjected to the action of air at atmospheric pressure at steam temperature. Next come the washers, of which two general types are in use, revolving and stationary. In the first the revolution of closed cylinders keeps the clothes in motion; in the second the cleansing is performed by the strokes of mechanically driven plungers. The boiling, rinsing, and bluing may all be performed in the washer or in another tub. The water is heated by steam, and sometimes the boiling is done under steam pressure, in which case the boiler must be especially strong; in fact, it is often made of $\frac{1}{4}$ -inch boiler plate and strong enough to resist a pressure up to 50 pounds. Various valves, starting and other devices in the interest of safety, are provided in view of the limited intelligence of many of the operatives. *Drying* is effected by passing the clothes through a

trough of carefully polished metal, heated by steam, gas, or electricity, revolves close to a second hard surface, which is usually covered with a felt padding and a cotton sheet. On the latter surface the article to be ironed is so placed that it is brought into close contact with the hot revolving cylinder of metal, the padded cover providing for such inequalities of surface as seams and hems. The most familiar form is the *mangle*, designed for ironing sheets, towels, and other articles of uniform shape and thickness. The principle is capable of endless adaptations, however, which fits it for ironing specially shaped garments, such as shirt bosoms and bodies, cuffs, collars, and sleeves. For such pieces as require starching there are specially constructed jacketed starch cookers to make the starch. Various types of machine starchers are used for different-shaped articles.

Owing to the large number of women employed in modern steam laundries, these establishments have received considerable attention from safety

engineers and welfare workers, and the modern tendency is to surround the moving machinery with every possible safeguard and to secure most sanitary conditions of operation and maintenance. Likewise the power question is important, as whether electric driving or shafting should be used is often a consideration. Electricity, of course, furnishes an ideal source of power with its self-contained motors, and now not only large laundries but even private laundries are being equipped with small-sized machines designed to reduce manual labor. These include electrically driven washing machines, mangles, electric irons, and other appliances, all of which result in neatness and labor saving, if not always in economy. Many devices of this kind are manufactured by the large supply companies and are often distributed by local central stations.

Laundry Industry in the United States. The thirteenth census of the United States, published in 1913, reported that the laundry industry from the returns received for the year 1909 included 5186 establishments, which gave employment to 124,214 persons and paid out \$53,007,747 in salaries and wages, \$17,693,360 for materials, and \$14,483,497 for miscellaneous expenses. The receipts for the year were reported as amounting to \$104,680,086. Naturally the laundry industry flourishes most in the cities and States of the densest population, and local conditions and customs govern. The average number of wage earners, 109,484, were divided into 31,479 males, of whom 268 were under 16 years of age, and 78,005 females, of whom 675 were under 16 years of age. These employees were distributed in establishments where the prevailing number of hours of labor was specified as follows: working 48 hours and under, 9216 employees; between 48 and 54 hours, 17,285; 54 hours, 20,790; between 54 and 60 hours, 24,864; between 60 and 72 hours, 598; 72 hours and over, 147. Of the total number of laundries covered by the census about 22 per cent were under corporate ownership; but these gave employment to about one-half of the wage earners and reported about one-half of the total received for work done during the census year. The laundries whose receipts for work done were \$100,000 and over as reported numbered 140, or 2.7 per cent of the total number of establishments, receiving \$21,489,526, or 20.5 per cent of the total amount. There were 1346 establishments whose receipts were between \$20,000 and \$100,000 and 2359 of which the receipts were between \$5000 and \$20,000. In no case did a laundry report receipts amounting to as much as \$1,000,000. The six cities in which 2000 or more persons were engaged in the industry, or in which receipts for work done during the year amounted to \$2,000,000 were, in the order of their importance by receipts for work done, Chicago, New York, Philadelphia, San Francisco, Los Angeles, and St. Louis. Although the population of New York was more than double that of Chicago, the receipts for laundry work done in steam laundries were only about three-fourths as great.

Bibliography. Consult Sidney Tebbutt's paper on "Steam Laundry Machinery," read in 1899 before the Institution of Mechanical Engineers of Great Britain and reprinted in *Cassier's Magazine* (London and New York) for February, 1899; also a paper by F. J. Johnson on "Large Steam Laundries," in the same maga-

zine for August, 1911. Rothery and Edmonds, *The Modern Laundry* (London, 1909), is a comprehensive manual of British practice.

LAUNE, lôn, or **LAULNE**, lôn, **ETIENNE** DE, or **DELAUNE**, de-lôn' (1518-c.1595). A French Renaissance engraver, born in Paris or perhaps at Orléans. He was originally a goldsmith and medalist and is supposed to have been aided by Cellini during the early part of his career. Afterward he joined the Reformers and spent the remainder of his life at Augsburg and then at Strassburg, where he died. His earliest dated engraving is 1561. His work shows the influence of the Italian school of Fontainebleau, and, owing probably to his training as a medalist, his best prints are small and highly finished. They display great taste and ingenuity and were intended as designs for armorers' and goldsmiths' work, including medals, money, jewelry, and plate; some of these are still to be seen at the Louvre. His larger plates, mostly after the Italian masters, are insipid. His son Jean was associated with him in his later works.

LAUNFAL, SR. A knight of the Round Table and steward of King Arthur. His story is the subject of a metrical romance by Thomas Chestre in the time of Henry VI and of James Russell Lowell's *Vision of Sir Launfal*.

LAUNITZ, lou'nits, **VLADIMIR VON DER** (?-1907). A Russian soldier and public official. During the Turkish War of 1887-88 he was decorated for bravery, and for three years he was Governor of Tambov. In January, 1906, he was appointed prefect of police of St. Petersburg (now Petrograd), and proved so zealous in repressing revolutionary agitators that he received the thanks of the Czar. As a result of the attempt on the life of Vice Admiral Dabassov and of the assassination of Gen. Count Alexis Ignatiev, Launitz increased in severity, arresting through his secret police 588 persons accused of revolutionary activities on three days in December, 1906, at St. Petersburg. On Jan. 3, 1907, Launitz was shot and killed by a young man who in turn was immediately killed by an officer.

LAURA (Gk. λαύρα, alley, cloister; possibly connected with Lat. *lura*, mouth of a bag, or with Lith *lerwas*, narrow stream between high banks). A name given to a collection of cells in a desert, differing from a monastery, in which the monks all lived together. Each monk in the laura had his own cell and for five days of the week lived alone, his only food being bread and water. On the other two days the monks assembled to receive communion, after which they joined in a light repast. They were subject to severe rules. A meagre diet, silence, and solitude were required. The word was almost exclusively applied to the institutions in Palestine, as the laura of St. Euthymius, 4 or 5 leagues from Jerusalem; the laura of St. Saba, near the brook Kidron, now the convent of Mar Saba; and the laura of the Towers, near the Jordan. The first seem to have been founded by St. Chariton (died c.350), of which the oldest is that afterward known as the laura of Pharan. Consult R. Genier, *Vie de Saint Euthyme le Grand*, 377-473, and *Les moines et l'église en Palestine au Ve siècle* (Paris, 1909).

LAURA. The lady celebrated in the poems of Petrarch (q.v.).

LAURACEÆ (Neo-Lat. nom. pl., from Lat. *laurus*, laurel), **THE LAUREL FAMILY**. A family

of dicotyledonous plants, consisting of trees or shrubs, many of which are evergreen. The leaves are without stipules; flowers in panicles or umbels; perianth is 4 to 6 cleft; stamens twice as many as the perianth segments and opposite them; fruit a one-seeded berry or drupe; fruitstalk often enlarged and fleshy. This family contains about 40 genera and 1000 species, mostly tropical, the greatest number occurring in southeastern Asia and in Brazil. The laurel (q.v.) is the only European genus. Genera belonging to the United States are *Persea* (bay), *Sassafras*, *Litsea* (pond spice), and *Benzoïn* (spicebush). An aromatic and fragrant character pervades the family, which includes cinnamon, cassia, and other aromatic plants. Some species are valuable for their timber, as greenheart; some for their medicinal barks, as greenheart (bebeeru) and sassafras; some for their secretions, of which camphor is the most important; some for their fruit, as the avocado pear (q.v.). About 30 very remarkable species, tropical climbing parasites like dodder, forming the genus *Cassytha*, are usually included in this family, although sometimes separated as a distinct family. See Colored Plate of CALIFORNIA SHRUBS for illustration of California laurel (*Umbellularia californica*).

LAURANA, lou-râ'nâ, LUCIANO DA. An Italian architect of the early Renaissance. The dates of his birth and death are unknown, but there is record of his activity as a builder between 1468 and 1482. His name is derived from his birthplace in Dalmatia, and he was, perhaps, a pupil of Brunelleschi. His most important works, the ducal palaces at Urbino and Gubbio, were executed for Federigo of Urbino. He excelled his immediate contemporaries in the simplicity and nobility of his proportions, his work being hard to distinguish from that of his pupil Bramante (q.v.).

LAUREATE (Lat. *laureatus*, from *laurea*, laurel tree, from *laurus*, laurel), POET. A title received from the English crown by letters patent. There is no installation ceremony, but the newly appointed laureate is expected to attend a levee in court dress. It was formerly his duty to compose an ode on the sovereign's birthday, on the birth of a royal infant, on a national victory, and by request on many other occasions. The origin of the title has given rise to much speculation. It was customary among the Greeks to crown with the laurel (which was sacred to Apollo) a popular poet, and the practice was revived in the Middle Ages. Petrarch, e.g., was crowned with great solemnity at Rome (1341). At Paris, Oxford, and Cambridge, the laurel wreath was sometimes placed on the heads of scholars distinguished for learning or poetry. John Skelton (died 1529) received the honor from both the English universities and accordingly styled himself *Poeta Laureatus*. Attached to the households of the mediæval English kings were minstrels and poets. They were not, however, crowned; instead of this honor they received pensions. Chaucer received from Edward III a pension of 20 marks (1366) and afterward (1374) a pitcher of wine daily—one of the subsequent perquisites of the laureateship. But Chaucer never received an official appointment to the post, and his pensions were for diplomatic and other services. In his *Poets Laureate of England* Hamilton recognizes a group of "volunteer laureates," in which he includes Chaucer, Gower, Kay, Andrew Bernard,

Skelton, Robert Whittington, Richard Edwards, Spenser, and Samuel Daniel. There was no English poet laureate till the accession of the house of Stuart. By virtue of his pensions in 1616 and 1630 Ben Jonson came to be regarded as laureate; but the title, so far as is known, was never officially conferred on him. On Dec. 11, 1638, William D'Avenant received from Charles I a pension of £100 a year, but no title accompanied the grant. He was, however, assumed to be laureate, especially after the Restoration. So far as is known, the first English poet to receive the title of Poet Laureate by royal letters patent was John Dryden. The honor was conferred on him Aug. 18, 1670. Dryden's successors, with their terms of office, are: Thomas Shadwell (1689-92), Nahum Tate (1692-1715), Nicholas Rowe (1715-18), Laurence Eusden (1718-30), Colley Cibber (1730-57), William Whitehead (1758-85), Thomas Warton (1785-90), Henry James Pye (1790-1813), Robert Southey (1813-43), William Wordsworth (1843-50), Alfred Tennyson (1850-92), Alfred Austin (1896-1913), Robert Bridges (1913-).

Bibliography. Austin and Ralph, *Lives of the Poets Laureate, with an Introductory Essay on the Title and Office* (London, 1853); Edmund Malone, essay prefixed to *Works of Dryden* (ib., 1800); Walter Hamilton, *The Poets Laureate of England* (ib., 1879); id., contributions to *Notes and Queries* (London, Feb. 4, 1894); K. West, *The Laureates of England* (ib., 1896); Grolier Club, *Catalogue of an Exhibition of Selected Works of the Poets Laureate of England* (New York, 1901); W. F. Gray, *The Poets Laureate of England: Their History and their Odes* (London, 1914).

LAUREL (from OF., Fr. *laurier*, Prov., Sp. *laurel*, from Lat. *laurus*, laurel), *Laurus*. A genus of Lauraceæ, which, as now restricted, contains only a few species, the principal ones being the noble laurel, victor's laurel (*Laurus nobilis*), and sweet bay (*Laurus canariensis*), natives of Asia Minor, but widely diffused in the Mediterranean region, often bushes of 15 feet or less, but sometimes trees of 30 or even 60 feet high. The former has rather large, lanceolate, leathery, shining leaves, reticulated with veins, and axillary clusters of yellowish-white flowers of no beauty. The fruit is oval, bluish black, and about half an inch long. The leaves and the fruit, which are bitter, astrigent, and agreeably aromatic, were formerly much used in medicine as a stomachic and stimulant, but are almost out of use. The leaves, however, are sometimes used in cookery for flavoring. They contain a volatile oil (*oil of sweet bay*) and a bitter, gummy extractive. By the ancient Greeks the laurel was called daphne and was sacred to Apollo. Berry-bearing twigs of it were wound round the foreheads of victorious heroes and poets; and in later times the degree of doctor was conferred with this ceremony, whence the term "laureation." The noble laurel is common in shrubberies, but not nearly so common as the cherry laurel (q.v.). See BAY; and, for mountain laurel, see KALMIA.

LAUREL. A city and the county seat of Jones Co., Miss., 110 miles northwest of Mobile, Ala., on the Mobile, Jackson, and Kansas City, the Gulf and Ship Island, and the Queen and Crescent railroads (Map: Mississippi, G 7). It is a commercial and manufacturing city, having railroad shops, cotton mills, wagon

shops, and several large lumber mills. There are two beautiful parks, a fine city-hall building, and, near the city, the State Agricultural Farm. First settled in 1894, Laurel has adopted the commission form of government. The city owns and operates its water works. Pop., 1900, 3193; 1910, 8465; 1914 (U. S. est.), 10,711.

LAUREL, CHERRY See **CHERRY LAUREL**.

LAUREL, MOUNTAIN. See **KALMIA**.

LAUREL FAMILY. A group of aromatic trees or shrubs, chiefly tropical. See **LAURACEÆ**.

LAUREL HILL. A range in southwest Pennsylvania, separating the counties of Fayette and Westmoreland from Somerset (Map: Pennsylvania, C 7). In the South the range extends over the border into West Virginia. It is a ridge of the Alleghany Mountains, and its average height is over 2000 feet, it contains valuable deposits of bituminous coal.

LAUREL WATER, or **CHERRY-LAUREL WATER**. A flavoring for medicines, obtained by distilling a mixture of chopped and bruised leaves of the cherry laurel and water, after 24 hours' maceration and standardizing to 1 per cent strength of hydrocyanic acid; but, owing to the volatilization of the latter, its strength varies. It is prescribed medicinally in the United States, mostly as a flavoring agent for cough mixtures, but has been used as a sedative narcotic, in neuralgic pains, spasmodic cough, and palpitation of the heart—in short, in all the cases in which hydrocyanic acid (q.v.) is applicable. Death has occurred, with all the symptoms of hydrocyanic-acid poisoning, from its incautious use as a flavoring ingredient in creams and puddings.

LAUREMBERG, lou'rem-bêrk, JOHANN (1590-1658). A German satirist. He was born and educated at Rostock and, after travels in Holland, England, France, and Italy, and a course of medicine at Paris and at Rheims, became professor of poetry at Rostock in 1618. Five years afterward he went to the Danish *Ritterakademie* of Sorbe as professor of mathematics. He wrote, in Latin, a play, *Pompeius Magnus* (1610); in Greek, an epithalamium, *Κύπρις Πλέουσα*; but found his proper place in the Low German dialect. His most famous work is his witty and realistic *Veer olde beromde Scherzgedichte*. Consult: Johann Classen, *Ueber das Leben und die Schriften des Dichters J. Lauremberg* (Lübeck, 1841); J. F. T. Latendorf, *Zu Laurembergs Scherzgedichten* (Rostock, 1875); L. Daac, *Om Humanisten og Satirikerne* (Christiania, 1884); Hermann Weimer, *Laurembergs Scherzgedichte* (Marburg, 1899).

LAURENCE, FRENCH (1757-1809). An English lawyer, born at Bath. He was educated at Winchester School and at Corpus Christi College, Oxford, graduating B.A. in 1777 and M.A. in 1781. Subsequently he studied law at the Middle Temple, took the degree of D.C.L. at Oxford in 1787, and in 1788, having just been admitted to the College of Advocates, with Sir William Scott, he was chosen by the House of Commons as counsel to the managers of the prosecution of the impeachment of Warren Hastings. In 1796 he was appointed regius professor of civil law at Oxford, and from that year till his death he represented Peterborough in Parliament. His *Poetical Remains* was published, with those of his brother Richard, in 1872. His *Critical Remarks on Detached Passages of the New Testament* were of interest, but of no theological or literary value. There

is a brief memoir of his life in *The Epistolary Correspondence of . . . Edmund Burke and Dr. French Laurence* (London, 1827).

LAURENCE, RICHARD (1760-1838). A Church of England scholar. He was born at Bath and graduated at Corpus Christi College, Oxford, in 1782. He entered the ministry of the Church of England and delivered the Bampton lectures in 1804, after which he became rector of Mersham, Kent. In 1814 he was appointed regius professor of Hebrew and canon of Christ Church, Oxford. In 1822 he became Archbishop of Cassel. It was largely through his influence that Oriental studies, long neglected in England, were restored to their rightful place. It was also through his instrumentality that several interesting apocryphal works, often quoted by the fathers, but supposed to be lost, were recovered from the Ethiopic manuscripts. Among these were the *Ascension of the Prophet Isaiah* (1819) and the *Book of Enoch the Prophet* (1821). He published a new version of *First Eddras* (1820), also from the Ethiopic; also *Dissertations on the Logos of Saint John* (1808), *Critical Reflections upon Some Important Misrepresentations Contained in the Unitarian Version of the New Testament* (1811), *On the Existence of the Soul after Death* (1834), and many essays and sermons.

LAURENS. A town and the county seat of Laurens Co., S. C., about 75 miles west-northwest of Columbia, on the Columbia, Newberry, and Laurens, and the Charleston and West Carolina railroads (Map: South Carolina, C 2). It is located in a farming region and has two large cotton mills and a glass factory. Pop., 1900, 4029; 1910, 4818.

LAURENS, HENRY (1724-92). An American patriot of the Revolutionary period, descended from a family of Huguenots who fled to America after the revocation of the Edict of Nantes. He was born in Charleston, S. C., engaged in mercantile pursuits in Charleston and London, and later established at Charleston a prosperous business. He retired, however, in 1771 and traveled for some time in Europe. In the pre-Revolutionary controversies between the American Colonies and the British government he early identified himself with the Whigs or Patriots, although he asserted the constitutionality of the Stamp Act and discountenanced forcible opposition to the exercise of authority under such statutes. He was one of about 40 Americans who petitioned Parliament against the passage of the Boston Port Bill, most of the petitioners being South Carolinians. He was President of the Council of Safety of South Carolina and Vice President of the State, was sent as delegate to the Continental Congress in 1776, and became its President Nov. 1, 1777, which office he resigned Dec. 1, 1778. In 1779 he was sent to Holland, charged with the negotiation of a commercial treaty, but fell into the hands of the British, and was imprisoned in the Tower for 15 months. He was bailed out by Richard Oswald. Congress appointed him in 1781 one of the peace commissioners, and on Nov. 30, 1782, he signed the preliminary treaty in Paris, in company with Adams, Jay, and Franklin. The collections of the South Carolina Historical Society contain many of his papers, which were collected after his death. Consult: "Henry Laurens: Narrative of his Capture and Confinement in the Tower of London," in *South Carolina Historical Society*,

Collections, vol. i (Charleston, 1857); Frank Moore (ed.), "Correspondence of Henry Laurens of South Carolina," in *Materials for History* (1st series, New York, 1861); *Laurens' Petition and Letters*, privately printed by H. B. Dawson (Morristown, N. Y., 1866-67).

LAURENS, lō'răn', JEAN PAUL (1838-). A French historical painter, one of the most eminent of the later nineteenth century. He was born at Fourquevaux (Haute-Garonne), and was a pupil of the Ecole des Beaux-Arts at Toulouse and of Cogniet and Bida in Paris. His compositions, depicting for the most part tragic and often gruesome episodes, are intensely dramatic in style and spirited in execution and never fail to produce a deep impression, although their effect is frequently marred by an exaggerated realism and lack of harmonious color. Out of their considerable number may be mentioned: "Death of Tiberius" (1864, Toulouse Museum); "A Voice in the Desert" (1868, Orléans Museum); "Execution of the Duc d'Enghien" (1872, Alençon Museum), which established his reputation; "Popes Formosus and Stephen VII" (1872, Nantes Museum); "The Pool of Bethesda" (1873, Toulouse Museum); "St. Bruno Refusing the Offerings of Roger, Count of Calabria" (1874, Petit Palais, Paris); "The Interdict" (1875, Havre Museum); "Excommunication of King Robert the Pious, 1004" (1875, Luxembourg); "The Austrian General Staff around the Deathbed of General Marceau" (1877, Ghent Museum), one of his finest works, which received the medal of honor in the Salon; "Release of the Immured at Carcassonne, 1803" (1879, Luxembourg); "Vengeance of Pope Urban VI" (1886); "The Men of the Sacred Office" (1889, Luxembourg); "Napoleon and Pius VII at Fontainebleau" (1891). The Proclamation of the Republic in 1848" (1902, Petit Palais). His numerous and important decorative works reveal a style somewhat akin to Puvis de Chavannes, but less decorative and harmonious in color scheme and composition. For the Panthéon he painted in fresco "Two Scenes from the Death of Ste. Geneviève," marked by solemn grandeur and replete with religious feeling; for the Paris Hôtel de Ville, a number of historical compositions; for the capitol at Toulouse, three of his best works, including the ceiling "Toulouse against Montfort" (1899). His excellent illustrations for Thierry's *Récits des temps mérovingiens* and for *Faust* (the drawings for the latter are in the Luxembourg) also deserve special mention. A portrait of himself (1882) is in the Uffizi Gallery, Florence. In 1886 he was appointed professor at the Ecole des Beaux-Arts; in 1891 he was elected member of the Institute and president of the Société des Artistes Français, and in 1900 Commander of the Legion of Honor. Consult: J. C. Van Dyke, *Modern French Painters* (New York, 1896), Eugène Montrosier, "Jean Paul Laurens," in *Gazette des Beaux-Arts*, vols. xx, xxi (3d series, Paris, 1898-99); F. Thiollier, *L'Œuvre de Laurens* (ib., 1906); J. Valny-Bayasse, "Jean Paul Laurens," in *Peintres d'aujourd'hui*, No. 2 (ib., 1910).

LAURENS, JOHN (1753-82). An American soldier, the son of Henry Laurens (q.v.). He was born in South Carolina, was educated in England, and in 1777 entered the Continental army as one of Washington's aids. In this position he discharged many of the delicate duties of a private secretary, and his familiar-

ity with foreign languages enabled him to be of great service in conducting the necessary correspondence with European officers in the service. He is said to have participated in all of Washington's battles, in several of which, while fighting with the utmost bravery, he was severely wounded. Early in 1781 he was sent on a special mission to France and by appealing directly to the King, in spite of diplomatic precedents, succeeded in negotiating a loan. At Yorktown he served with reckless daring and in the following year, while on the staff of General Greene, was killed (August 27) in an insignificant skirmish on the Combahee River. His unusual abilities, coupled with his gallantry, his courtesy, and his chivalrous devotion to his country, made him a universal favorite and won for him the title of the Bayard of the Revolution. Washington said of him: "He had not a fault that I could discover, unless it were intrepidity bordering upon rashness." The army correspondence of Laurens, together with a brief memoir by W. G. Simms, was privately printed in 1867 by the Bradford Club (New York).

LAURENT, lō'răn', AUGUSTE (1807-53). A French chemist, born at La Folie. He studied metallurgy under Dumas, whose assistant he became at the Ecole Centrale des Arts et Manufactures. He was for some time chemist at the potteries at Sèvres and Luxemburg, taught chemistry at Bordeaux (1838-46), contributed to the chemistry of naphthalene, paraffin, and phenol, but is better known for his contributions to theoretical chemistry, especially his foundation (with Gerhardt) of the theory of types. See **CHEMISTRY**.

LAURENT, FRANÇOIS (1810-87). A Belgian historian and jurist. He was born at Luxemburg and became chief of division in the Ministry of Justice. From 1836 until his death he held the chair of civil law at the University of Ghent, where he became known as a champion of liberal and progressive ideas. His writings include his chief work, *Études sur l'histoire de l'humanité* (18 vols., 1855-70); *L'Eglise et l'état* (3 vols., 1858-62; rev. ed., 1865); *Principes de droit civil* (33 vols., 1869-78); *Droit civil international* (8 vols., 1880-81).

LAURENTIAN (lā-răn'shən) HEIGHTS, or THE LAURENTIDES. The name given to the plateau-like height of land which forms the divide between the streams running into Hudson Bay and the two great water systems of the St. Lawrence and the Mackenzie. (See **AMERICA**, Physical Map North America, Laurentian Plateau.) It has the shape of a horseshoe or crescent of vast extent, reaching from east Labrador to the Arctic Ocean surrounding Hudson Bay. Its average height is from 1000 to 3000 feet, and its surface is uneven, with a multitude of depressions occupied by lakes and some considerable areas of fertile land. The principal break through it is made by the Nelson River.

LAURENTIAN LIBRARY. See **FLORENCE**, *Educational Institutions*, **LIBRARIES**, *History*.

LAURENTIAN SYSTEM. A name given by Sir William Logan to a series of highly metamorphosed rocks, older than the Cambrian, which are strongly developed in Canada, especially in the region of the Laurentian Mountains. The system has received different values from various geologists, but the generally accepted classification limits it to the basal or fundamental complex of gneisses and granites

of the Archean group, which comprises also the Huronian system. See PRE-CAMBRIAN FORMATIONS.

LAURENTIDES, lə'rən-tidz. *Fr. pron.* lə'rən'téd'. A plateau in Canada. See LAURENTIAN HEIGHTS.

LAURENTIE, lə'rən'té, PIERRE SÉBASTIEN (1793-1876). A French historian and journalist, born at Hougla (Gers). He devoted his attention early in life to history and in Paris was appointed professor of rhetoric at the Collège Stanislas in 1817 and assistant professor of literature at the Ecole Polytechnique in 1818. In 1822 he was appointed inspector general of public education. In addition to articles for the journal *La Quotidienne*, of which the most famous is his essay "Sur la liberté fondée sur le droit divin," he published many works on history. The best known is his *Histoire de France* (1841-43).

LAURENTIUS, lə-rən'shī-tis. Antipope, 498. He was rival to Symmachus, elected on the same day in Rome. He represented the party desirous of keeping on friendly terms with Constantinople and accepting the Henoticon of the Emperor Zeno (q.v.); while Symmachus represented the party opposed to such a course. Both sides had excellent leaders; the clergy apparently more generally favored Symmachus. They agreed to appeal to the Arian King of Italy, the Ostrogoth Theodoric at Ravenna, and he decided in favor of Symmachus. The followers of Laurentius kept up a hopeless and bloody struggle, but are not heard of after 501.

LAURENTIUS VAL'LA. See VALLA.

LAURENTUM. A very ancient town of Latium (q.v.), about 16 miles southeast of Ostia and near the modern Tor Paterno. In Roman legend it was the capital of King Latinus, who welcomed Æneas on his arriving in Italy. It was of some commercial importance during the traditional kingly period, but was later abandoned and left in ruins. With the growth of Rome, however, it was afterward resettled and became a fashionable resort of the wealthy Romans, owing largely to its extensive laurel groves. Pliny the Younger (*Epistles*, ii, 17) describes with minuteness his beautiful villa at Laurentum, and the Emperor Commodus (180-192 A.D.) passed much time there. Under Trajan (98-117 A.D.) the towns of Laurentum and Lavinium were recolonized and united under the name Lauro-Lavinium.

LAURESTINUS. See LAURUSTINUS.

LAURIA, lou'rè-à. A city in the Province of Potenza, Italy, 7 miles south of the nearest railway station at Iaconegro which is 114 miles by rail southeast of Naples (Map: Italy, E 4). Situated on a steep slope 1821 feet above the sea, it is divided into an upper and a lower town, the former surrounded by walls. It manufactures leather and woolen cloth and rope, and the country produces grain, wine, fruit, and potatoes. Pop. (commune), 1901, 10,099; 1911, 9769.

LAURIA (LURIA or LORIA), RUGGIERO DI, or ROGER DE (died 1305). The greatest naval commander of the Middle Ages and one of the greatest in history. It is believed that he was born in the castle of Lauria in the Italian city of the same name in Basilicata, near the border of Calabria. The date of his birth and his early career are unknown. His father was a supporter of Manfred, King of Sicily. In 1282 occurred the Sicilian rebellion (called the Sicilian Ves-

pers) against the cruelty of the representatives of Charles of Anjou, who had conquered the island after the death of Manfred. Peter III of Aragon, who claimed Sicily in right of his wife, was invited by the nobles to come and fight for the crown. In 1282 he proceeded to Sicily, accompanied by Lauria, who had been placed in command of the naval forces, and eventually he conquered the island. In the 17 years that Lauria was in command of the Aragon fleets he fought a greater number of important battles than any admiral in history and was never defeated. In 1283, off Malta, he overcame and dispersed a French force in the service of Charles of Anjou. In 1284 he defeated the Angevin fleet in the Bay of Naples, capturing Charles of Salerno, the Angevin heir apparent, who was afterward kept in captivity for many years. In 1285 the French King, Philippe le Hardi, endeavored to create a diversion in favor of Charles by invading Catalonia and Aragon. Lauria, hastily recalled from Sicily, prosecuted on the Spanish coast one of the most brilliant campaigns in history. The French troops were strenuously resisted and compelled to rely upon their fleet for support and supplies. This fleet was greatly superior in strength to Lauria's force, but, in order to control the whole coast, it was much spread out. On Sept. 9, 1285, Lauria fell suddenly upon the French centre near the Hormigas, utterly demolishing it, sinking the vessels by ramming, and destroying the *personnel* by a cloud of bolts from the very numerous, heavy, and efficient crossbows which he had mounted upon the rails of his vessels. Lauria then proceeded to Rosas, lured the French squadron outside by hoisting French colors, and defeated it in an equally decisive manner. These and some minor operations which followed destroyed the French naval power so completely that it did not recover for many years, and compelled the immediate retreat of the French from Aragon territory. During the retreat the French King died.

Lauria was now able to return to Sicily. Peter died in 1286. He had left Aragon to his son James and the Sicilian Kingdom to another son, Alphonso, whom Lauria continued to serve. Alphonso died in 1291 and was succeeded by James, his younger brother Frederick (afterward Frederick III) acting as Viceroy. Hard pressed by the Angevins, James made peace by offering to give up the Kingdom of Sicily. But Frederick refused to surrender it. For a time Lauria supported Frederick, but as he had large estates in Valencia and was under many and great obligations to the kings of Aragon, he soon went over to James, who was now endeavoring to get possession of Sicily to fulfill his treaty obligations. Frederick punished this desertion by confiscating Lauria's Sicilian estates and putting his nephew to death. In two subsequent victories over the Sicilians Lauria took terrible revenge. But the operations of Frederick on land were more fortunate than those on the sea, and the victories of the naval commander, decisive though they were, did not control the outcome. The Treaty of Caltabellotta, in 1302, ended the war. In 1303 Lauria retired to his estates in Valencia, and in 1305 he died. Unfriendly critics have accused Lauria of ferocity and cruelty; but such were the common attributes of all conquerors of those days, and it does not appear that he was any more

inhuman than his enemies. Consult: *Chronicle of Ramon Muntaner* (1265-1336), edited by Karl Lanz (Stuttgart, 1844); Michele Amari, *Guerra del Vespro* (8th ed., 2 vols., Florence, 1876); Charles de la Roncière, *Histoire de la marine française*, vol. i (Paris, 1899); and the various histories of the Sicilies and of Aragon.

LAURIAN, lău're-ă-n', AUGUST TREBONIU (1810-80). A Rumanian philologist and author. He was born near Hermannstadt, Transylvania, was educated at Klausenburg and Vienna, in 1844 was appointed a professor of philosophy in the College of St. Sava at Bucharest, and in 1847 a councilor of education. In 1848 he took active part in the political disturbances in Transylvania. He was appointed superior councilor of education in Moldavia in 1851 and general inspector of education and university professor at Bucharest in 1859. In 1867 he was elected to the Rumanian Academy. He founded and with Bălcescu edited the *Magazin Istoric al Daciei* (The Dacian Historical Magazine, 5 vols., 1845-48), in which appeared much of his best work. His *Istoria Românilor* (1853) and other volumes, on either Roman or Rumanian history, which he regarded as identical and continuous, are often defective through lack of special knowledge. His *Tentamen Criticum in Originem Linguae Romanae* (1840) teemed with perversions due to the author's false idea of patriotism. Like his *Dictionarul limbii române* (3 vols., 1871-76), an academic publication, and its supplement, *Glosar de vorbe străine* (Glossary of Foreign Words, 1871), it extends the Latinist historical method of Cipariu, emphasized by its adherents as the scientific in contradistinction to the anarchistic, or new, school. The Dictionary and Glossary abound in absurd etymologies and advocate a spelling and vocabulary which, had they been adopted, would have rendered literary Rumanian wholly unintelligible to the common people.

LAURIC ACID (from Lat *laurus*, bay tree, laurel), also called LAUROSTEARIC or PICHRURIC ACID, $C_{27}H_{52}O_2$. A fatty acid first described by Marsson in 1842. It occurs as a glyceride, laurostearin, in the fat of the bay tree and in the solid fat and volatile oil of pichurim beans. It occurs in connection with myristic acid in the berries of *Myrica gale* and in other plants. It also exists in connection with other fatty acids or their glycerides in spermaceti and in coconut oil. It may be prepared from oil of bay by saponifying the oil with strong caustic potash, decomposing the soap with hydrochloric acid, and distilling the fatty acids thus set free *in vacuo*; the first portion passing over is almost pure lauric acid. Lauric acid is slightly soluble in hot water; it is readily soluble in alcohol and ether and crystallizes from the alcoholic solution in white, silky needles or translucent scales, which melt at about 43.5° C (110.3° F.). The laurates of the alkali metals and of barium are soluble in water. The other salts are insoluble or slightly soluble. The laurates of the alkali metals are much more soluble in salt water than the alkali metal salts of the other fatty acids; this is why "marine soap" is made from coconut oil. See SOAP.

LAURIE, lă'ri, ARTHUR PILLANS (1861-). A Scottish chemist and educator, son of the philosopher S. S. Laurie. He was educated at Edinburgh and at Cambridge, where

he was a fellow of King's College and in 1891 Cantor lecturer. In 1895 he became lecturer in physics and chemistry at St. Mary's Hospital Medical School and an assistant to the royal commission on secondary education, and later was made principal of the Heriot-Watt College, Edinburgh. In chemistry he did valuable work on the atomic weight of gold and on the electromotive force of copper, zinc, tin, and gold alloys, but is better known for his studies of oils and colors—he was examiner in oils and colors to the City and Guilds Institute (1898) and professor of chemistry to the Royal Academy of Arts. Laurie edited *The Teacher's Encyclopædia of Education* (1911) and wrote: *The Food of Plants* (1893); *Processes, Pigments, and Vehicles* (1895); *The Materials of the Painter's Craft* (1910); *The Pigments and Mediums of the Old Masters* (1914).

LAURIE, JOHN WIMBURN (1835-1912). A Canadian and British soldier and legislator. He was born in London, England, and after a military education served in the Crimean War (1854-56) and later in the Indian mutiny (1857-59) as staff officer of a field force. In both campaigns he received medals and promotion. He went to Canada in 1861, at the time of the Trent Affair (q.v.), was inspecting field officer of the Nova Scotia militia for five years, and served during the Fenian raids of 1866 and 1870, the Transvaal campaign (1881), the second rebellion in the Canadian Northwest (1885), and the Servo-Bulgarian War (1885-86). In 1887 he attained the rank of lieutenant general. He was a Conservative member of the Canadian House of Commons in 1887-91 and of the Imperial House of Commons in 1895-1906.

LAURIE, SIMON SOMERVILLE (1829-1909). A Scottish educator and philosopher, born in Edinburgh and educated at the high school and university of that city. He taught on the Continent for five years, in 1855 was secretary and visitor of schools on the educational committee of the Scottish church, and in 1872, when the authority of this committee was abrogated by the Education Act, he became secretary to the Endowed Schools Commission. He was a member of the Edinburgh University Court and president of the Teachers' Guild of England, and from 1876 to his retirement in 1903 was professor of the institutes and history of education in Edinburgh University. There also he was Gifford lecturer on natural theology in 1905-06. He wrote: *Philosophy of Ethics* (1866); *Primary Instruction in Relation to Education* (1867; 5th ed., 1898); *John Amos Comenius* (1881; 6th ed., 1898); *Ethica by Scotus Novanticus* (2d ed., 1891); *Medieval Education and Rise and Constitution of Universities* (1886); *Lectures on Language and Linguistic Method in the School* (1890; 4th ed., 1903), delivered at Cambridge; *Institutes of Education* (1892, 2d ed., 1899); *Historical Survey of Pre-Christian Education* (1895; 2d ed., 1900); *Training of Teachers and Methods of Instruction* (1901); *Studies in the History of Educational Opinions from the Renaissance* (1903); *Synthetica, Being Meditations Epistemological and Ontological* (2 vols., 1906), the Gifford Lectures.

LAURIE, lă'ri-ă, SIR WILFRID (1841-). A Canadian statesman. He was born of French-Canadian Catholic parents at St. Lin, Province of Quebec, Nov. 20, 1841. He received

seven years of academic training at L'Assomption College, at an early age having begun to learn the English language; studied law at McGill University, was called to the bar in 1864, and practiced his profession in Montreal and later at Arthabaskaville. At that time he did not heartily support confederation, and, though a decided Liberal, he had Protectionist leanings on the tariff question. Elected a member of the Quebec Legislature in 1871, his first speech in that body won him instant recognition as an orator. In 1874 he entered Dominion politics, being elected to the House of Commons, first for Drummond and Arthabaska (1874-77), and in 1878 for Quebec (city) East. He was Minister of Inland Revenue (1877-78) in the Mackenzie administration, upon the defeat of which in 1878 he began his term of 18 years in Opposition, 9 years as a private member, and 9 years as Liberal leader, a position to which he was elected in 1887. The demands upon him were exacting, especially on account of his race and religion, but he met them with a resourcefulness that proved his ability as a parliamentarian and his capacity for the higher popular appeal of political leadership. His eloquence, both in French and English, contributed largely to his success. In the latter part of his Opposition term he was confronted with the issue of religious education, which he met with courage. In Manitoba (q.v.) the question of separate schools had long vexed the province and in 1896 had become important in the federal elections. The Roman Catholic bishops of his province ordered the faithful to vote against Laurier, because he opposed the forcing of separate schools on Manitoba; but the firm attitude of the Liberal leader was sustained by popular vote. He became the first French-Canadian Premier of the Dominion, and for a longer continuous period than any other Canadian first minister (1896-1911). His premiership was notable for the expansion of trade and transcontinental railway building, the development of agriculture, and the growth of Canadian nationality within broad, freely chosen lines of imperialism, the latter term implying no more than a loose confederacy of nations under the British flag. Laurier thus aided in promoting British connection, while increasing the initiative of Canada as a part of the Empire. He left the protective tariff unchanged in its essential features and won the gratitude of Britain by giving her manufactures a preference of 33½ per cent (1900). He took part, though without success, in the attempt to settle outstanding disputes with the United States through the Joint High Commission (1898-99). He represented Canada at the Colonial Trade Conference in London in 1902, and at Imperial conferences in that city in 1907 and 1911. During his administration a Canadian Envoy cooperated on equal terms with the British Ambassador in the diplomatic settlement of a dispute with Japan (1907). In 1911 his government's advocated a measure of trade reciprocity with the United States, was defeated, and resigned office. Laurier received many honors from abroad, including degrees from the leading British universities and the freedom of several British cities. He was in 1897 made a member of the Imperial Privy Council and was knighted (G. C. M. G.). He was a prominent figure among the colonial officers at Queen Victoria's Diamond Jubilee

(1897), the coronation of Edward VII (1902), and the coronation of George V (1911). After his resignation he continued to lead the Liberal Opposition. Upon the outbreak of the European War in 1914 he ardently supported the parliamentary vote in aid of Great Britain, and in the urgent assembling of military contingents to be sent abroad he appealed with especial emphasis to his French-Canadian fellow countrymen. In 1868 he married Miss Zoe Lafontaine, of Montreal. Consult Sir J. S. Willison, *Sir Wilfrid Laurier and the Liberal Party* (London, 1903), and L. O. David, *Laurier et son temps* (Montreal, 1905). For the literary significance of his speeches, see CANADIAN LITERATURE.

LAURION, or **LAURION** (Lat., from Gk. *Λαύριον*, *Λαύρειον*, *Laureron*). A promontory in southeast Attica, Greece, projecting into the Aegean Sea, celebrated for its mines (Map: Greece, E 6). They seem to have been known in prehistoric times, and there are numerous Mycenaean remains throughout this region. It is also possible that they were later worked by the Phœnician traders. But they first became important towards the end of the sixth century B.C., with the growth of Athenian power and commerce. During the fifth and fourth centuries they were of the greatest value to the commercial supremacy of Athens. At the suggestion of Themistocles the Athenians devoted the revenues of the mines to the building of a navy; it was this navy that long made Athens the leading power in Greece (see GREECE, *Ancient History*), and that won the day at Salamis (q.v.). But with the increased supplies of the precious metals which resulted from the Eastern conquests of Alexander the Great the importance of the mines at Laurion rapidly declined, and about the beginning of the Christian era they were abandoned. The mines were the property of the Athenian state, which leased them to citizens, who worked them by slave labor. The chief product was silver, though lead was also obtained in large quantities, and the yield of minium (red oxide of lead) and ochre was of appreciable value. The mines were worked by cutting narrow galleries in the rock, and the products were separated by crushing or grinding, washing, and melting. In 1860 a Marseilles company bought the right to work over the heaps of refuse, from which much lead was extracted. In 1869 a dispute arose over the limitations imposed by the contract, and after a protracted lawsuit the company in 1873 purchased a large tract of land. Since then two large and three smaller companies have occupied the territory and carry on profitable operations in the production of lead, cadmium, and manganese. Silver, the most important product in ancient times, is of little value at present. The mines are connected by rail with Athens through the port of Laurion or Ergasteria, which has a good harbor, workshops, smelting furnaces, and a population (1909) of 5100, according to Baedeker. Consult Edouard Ardaillon, *Les mines du Laurion dans l'antiquité* (Paris, 1897); Baedeker, *Greece* (4th Eng. ed., Leipzig, 1909); C. P. Oikonomos, in *Kaiserlich deutsches archaologisches Institut, athenische Abtheilung*, vol. xxxv (Athens, 1910); J. P. Mahaffy, *Rambles and Studies in Greece* (7th ed., New York, 1913).

LAURISTON, *lô'rî'stôn'*, JACQUES ALEXANDRE BERNARD LAW, MARQUIS DE (1768-1828). A French marshal, born at Pondicherry, India. He was educated at the Ecole Militaire in Paris

and at Brienne, where he was a comrade of Napoleon. He entered the army in 1785 and from 1792 was with the Republican armies in the Netherlands and on the Rhine. He was an artillery colonel in 1795 and in 1800 became aid-de-camp to Napoleon, who sent him to England in 1802 to transmit the articles of the Peace of Amiens. He was made brigadier general in 1805 and Governor-General of Venice in 1807. At Wagram (1809) his artillery at a critical moment crushed the Austrian centre and gained the victory. He was Envoy Extraordinary to St. Petersburg in 1811, took part in the Russian campaign of 1812, fought at Lützen and Bautzen, and was taken prisoner at Leipzig (1813). After the Restoration Louis XVIII made him a general of division (1815) and gave him the title of Marquis (1817). He became a marshal of France (1820) and took part in the invasion of Spain in 1823.

LAURUM. A mining district of Greece. See LAURION.

LAURIUM, lă'ri-ŭm (formerly CALUMET). A village in Calumet Township (q.v.), Houghton Co., Mich., 17 miles north by east of Houghton, the county seat, on the Mineral Range and the Copper Range railroads (Map: Michigan, A 1). It is situated on Keweenaw Peninsula, in one of the richest copper districts of the United States and in the vicinity of several of its most famous mines. Pop., 1900, 5643; 1910, 8537; 1914 (U. S. est.), 9770.

LAUROSTEARIC (lă'rô-stê-ăr'ik) **ACID.** See LAURIC ACID.

LAURUSTINUS (Neo-Lat., from Lat. *laurus*, laurel + *tinus*, sort of plant), or **LAURESTINUS** (*Viburnum tinus*). An ornamental shrub, native of the south of Europe and the north of Africa, which belongs to the Caprifoliaceæ, or honeysuckle family. It is an evergreen, with dark, shining, leathery leaves and with corymbs of small whitish flowers, which appear in winter or early spring and are followed by small, blackish-blue, acid berries, which inflame the mouth and have drastic, purgative properties. Birds, however, eat them with avidity. Since the laurustinus cannot endure much frost, it is grown in northern latitudes as a greenhouse or house plant for winter flowering. Sometimes it is planted out in summer. See VIBURNUM.

LAURVIK, lour'vêk, or **LARVIK**. A seaport and watering place of Norway, situated on the Larvikfjord, at the mouth of the river Laagen (Map: Norway, D 7). There are sulphur and iron springs in the neighborhood which attract visitors, and the town has a growing reputation for its mud baths. The chief trade is in wooden ware. Pop., 1901, 10,664; 1912, 10,105.

LAUSANNE, lô'zân' (Lat. *Lausonium*). Capital of the Swiss Canton of Vaud, situated on the Flon, on the lower slopes of Mont Jorat, about 1 mile north of Lake Geneva (Map: Switzerland, A 2). Improvements, including the filling in of the Flon valley which separates the old and new portions of the town, have destroyed much of its natural beauty. The valley is spanned by a two-story viaduct, known as the Grand Pont, connecting the quarters of Saint-François and Saint-Laurent. The imposing cathedral of Notre Dame, built in 1235-75 and restored in 1906, is Gothic. It is noted as the scene of a disputation in 1536 in which Calvin, Farel, and Viret participated, and which resulted in the secession of the canton from the

Catholic church. On the handsome Place de la Riponne stands the Palais de Rumine, erected in 1904, containing a museum of industrial art, natural history, and fine arts. On a hill west of the town stands the National Supreme Court of Appeals, a handsome Renaissance building. The old town hall, and the prison, modeled after the Pennsylvania system, the theatre, the new post office, and the cantonal bank, are also notable buildings.

The educational institutions of Lausanne are numerous and excellent. The university, founded in 1537 as an academy for Protestant ministers and constituted a university in 1891, has five faculties and, in 1913, 1331 students. There are schools for instruction in agriculture and viticulture, a Protestant theological school in connection with the cathedral with a library of 45,000 volumes, and many girls' boarding schools patronized by foreigners. The cantonal library had, in 1913, 280,000 volumes. Charitable institutions include asylums for the blind and insane. Manufactures consist chiefly of machinery, tobacco, chocolate, book printing, and sugar. There is some trade in grain and lumber and in the wines of the vicinity. The port of Lausanne is the adjoining town of Ouchy.

Lausanne (the Roman *Lausonium*) is a favorite place of sojourn for English and Germans and has been the residence of many distinguished persons, including the historian Gibbon. Pop., 1900, 46,407; 1910, 63,926. The inhabitants are mostly Protestants and speak French. Lausanne was probably founded at the beginning of the sixth century. It became the seat of a bishopric in 590. It remained under the rule of its bishops (who attained princely rank in 1125) until the introduction of the Reformation in 1536, when it came under the control of Bern. In 1803 it was made the capital of the newly created Canton of Vaud.

LAUSANNE, HENRY OF. See HENRICIANS.

LAUSER, lou'zêr, WILHELM (1836-1902). A German historian and essayist, born at Stuttgart. He studied at Tübingen and Heidelberg and spent five years in Paris as a journalist. He edited various papers and in 1896 became editor of the Berlin *Norddeutsche Allgemeine Zeitung*. His published works include: *Aus Spaniens Gegenwart* (1872); *Geschichte Spaniens von dem Sturz Isabellas bis zur Thronbesteigung Alfonsos XII.* (1878); *Unter der Pariser Kommune* (1878); *Kunst in Oesterreich-Ungarn* (1884); *Der erste Schelmenroman: Lazarillo von Tormes* (1889).

LAUSITZ, lou'zīts. A district in Germany. See LUSATIA.

LAUSONIUM, lă-sô'ni-ŭm. See LAUSANNE.

LAUSSEDAT, lô's'dă', AIMÉ (1819-1907). A French geodesist and astronomer. He was born at Moulins and studied at the Ecole Polytechnique (1840), in which, after active service in the engineers, he became professor of geodesy and astronomy (1856). Nine years afterward he was appointed professor of applied geometry at the Conservatoire des Arts et Métiers, and in 1881 became director of that institution. The adoption of Paris time for all France by the Law of 1891 was largely due to Laussedat's endeavors. He was elected president of the commission on aerial transportation, became known for his improvements in geodetic photography and astronomical instruments, and published *Leçons sur l'art de lever les plans* (1860) and *Recherches sur les instruments, les*

methodes et le dessin topographiques (2 vols., 1898-1903).

LAUT, AGNES CHRISTINA (1872-). A Canadian author. She was born at Stanley, Ontario, but in early youth removed to Winnipeg and was educated at Manitoba University. She became an editorial writer on the *Manitoba Free Press* in 1895, and a special correspondent for leading journals in the United States and Canada. Later she removed to New York and joined the staff of *Outing*. Her stories and descriptions of Canadian life, especially life in the Northwest, were widely read. Her publications include: *Cruising on the French Treaty Shore of Newfoundland* (1899); *The Lords of the North* (1900), *Heralds of Empire* (1902), *Story of the Trapper* (1902), *Pathfinders of the West* (1904); *Vikings of the Pacific* (1906), *The Conquest of the Great North-West* (1908), *Canada, Empire of the North* (1909); *Freebooters of the Wilderness* (1910); *The New Dawn* (1913); *Through our Unknown Southwest, the Wonderland of the United States* (1913).

LAUTERBRUNNEN, lou'tër-brun'en. A village and tourist resort in the Canton of Bern, Switzerland, 2620 feet above the sea, and 6½ miles southeast of Interlaken (Map. Switzerland, B 2). Pop. 1900, 2547; 1910, 3318. It is built on both sides of the White Lutschine, in a deep rocky valley, noted for its picturesque scenery and its number of springs, whence the name. Towering in the distance on the left is the Jungfrau and the right the Breithorn. In the neighborhood are the celebrated cascades of Staubbach and Trummelbach.

LAUTREC, lô'trêk', ODET DE FOIX, SEIGNEUR DE (1485-1528). A French marshal. He was the son of Jean de Foix and the brother of François de Châteaubriant, the celebrated mistress of Francis I. All his life a soldier, he fought under his cousin, Gaston de Foix, at Ravenna (1512), was present at Marignano (1515), took the Constable de Bourbon's place as Governor of Milan and ruled with great severity, was completely defeated by Prospero Colonna at La Bicocca (1522), and five years afterward, as commander of the army in northern Italy, re-established the French dominion there. He died of the plague during the siege of Naples. Brantôme calls him one of the great French captains.

LAU-TZÊ. See LAO-TSE.

LAUZON, lô'zôn', or **SAINT JOSEPH**, sän zhô'zhêf'. A town in Lévis Co., Quebec, Canada, on the south bank of the St. Lawrence River and on the Intercolonial and Quebec Central railways, 2 miles from Lévis and 5 miles east of the city of Quebec. It is connected by electric railway with Lévis, from which there is a ferry to Quebec. It has a shipbuilding industry, and its manufactures include window blinds, trunks and valises, boxes, and aerated waters. Pop., 1901, 3416, 1911, 3978.

LAUZON, lô'zôn', ARMAND LOUIS DE GONTAUT-BIRON, DUKE DE (1747-93). A French soldier, born in Paris. After a youth of furious dissipation he led in 1779 a successful expedition against the English in Senegal and Gambia and in 1780 came to America, where he fought at Yorktown. In 1788 he succeeded to the title of Duke de Biron and was a deputy to the States-General and the supposed agent of the Duke of Orléans. He was commander in chief of the Army of the Rhine in 1792 and of the Army of La Rochelle in 1793. After taking Saumur and defeating the Vendéans at Parthe-

nay, he resigned owing to machinations carried on against him by his subordinates. Accused before the Committee of Public Safety of having been too lenient in his treatment of the Vendéans, he was imprisoned, tried before the Revolutionary Tribunal for conspiracy, condemned Dec. 31, 1793, and executed the same day.

LAUZON, JEAN DE (1582-1666). French Governor of Canada. He early became interested in New France and was made president of the Hundred Associates, a company organized to further the settlement of the French dominions in America. He directed most of his energies to securing immense grants of territory for himself and for members of his immediate family, and in this way he procured for his son a tract of land extending for 60 leagues along the St. Lawrence with the exclusive right of fishing in that river, while for himself he secured the island of Montreal, which he afterward sold to the Jesuits. In 1651 he became Governor of New France. His administration of five years was weak and vacillating in policy. In 1656, shortly before the end of his second term, he returned to France, leaving the government in the hands of his son, De Charney, who soon followed his father's example, leaving a second substitute to direct the fortunes of New France.

LAUZON, lô'zôn', ANTOINE NOMPAR DE CAUMONT, DUKE DE (1632-1723). A French soldier, born in Gascony. He came to court about 1669 and won the favor of the young Louis XIV by his energy, shrewdness, and a certain swash-buckling carriage that differed favorably from the common courtier's demeanor. The King made him colonel of the royal dragoons, Governor of Berry, and maréchal de camp, and promised him the mastership of the ordnance. The favorite's overbearing conduct brought him a term in the Bastille, but he was soon released and mollified with the command of the army in Flanders (1671). Louis intended to marry Lauzon to Mademoiselle de Montpensier, La Grande Mademoiselle, granddaughter of Henry IV, but court intrigues seem to have prevented the marriage, though there is some authority for believing that a secret marriage did take place some two years later. The enmity of Madame de Montespan sent Lauzon to the prison again at Pignerol in 1671, and there he stayed till 1676, when he was released and banished. He was intimate with the "Man in the Iron Mask" while imprisoned. In 1680 he obtained permission to return to Paris. He went to England in 1688, returning in the same year after the Revolution, as escort to James II's Queen and infant son. Louis restored him to partial favor. In 1689 he led a French force to Ireland and fought for James II in the disastrous battle of the Boyne in 1690. In 1692 he became Duke, and three years later married Mademoiselle de Duford, a girl of 16.

LAVA, lä'va (It., stream). Molten rock material which is poured out at the surface of the earth either from volcanoes or in fissure eruptions. Fissure eruptions, while not numerous, have been exceptionally extensive, as in the Deccan of India, and the Snake River plains of the northwestern United States. The fluidity of lavas as they issue from the earth depends upon their chemical nature, but is also influenced by the accompanying vapors and gases which are often present in eruptions in large amounts. Owing to the presence of water

vapor, chlorine, and other "mineralizers," the temperatures of molten lavas are much lower than are required to produce fusion of the dry rocks. Lavas of siliceous nature usually have a pasty or ropy consistency and flow sluggishly, while basaltic lavas are usually fluid and flow freely. The former build up volcanic cones of steep slopes, as in central France, whereas basaltic lavas form volcanic cones of gentle slopes, like those of Etna or the Hawaiian volcanoes. Some lavas decompose and disintegrate with amazing rapidity and form a fertile soil for the vine. Others, but slightly different in composition, present for centuries a firm unyielding surface to the elements. Lavas may be either compact or vesicular, sluggy, scoriaceous, or pumiceous. See IGNEOUS ROCKS; BASALT; DIKE; VOLCANO, PUMICE.

LAVAGE, lăv'aj, or as Fr., lă'vâzh'. Stomach washing is a procedure used by physicians for both diagnosis and treatment of certain gastric ailments. The simplest apparatus consists of a long rubber tube, perforated at one end and having a glass funnel connected to the other extremity. This tube is moistened and passed through the oesophagus into the stomach, the patient sitting upright with the head thrown back and assisting the passage of the tube by efforts at swallowing. From the incisor teeth to the lower portion of the stomach the average distance is, in the adult, 22 inches; and the tube should extend 3 feet beyond the teeth to allow of siphonage. From a pint to a quart of warm sterile water, or a weak alkaline solution, may be used for washing. This is poured into the funnel, and when the water is just about to disappear from the funnel the latter is quickly lowered, when the contents of the stomach will flow out again, the tube acting as a siphon. The stomach tube is employed to remove test meals, to gauge the rate of digestion, and to ascertain the acidity, quantity of mucus secreted, and other conditions existing in the diseased organ. As a method of treatment, stomach washing is useful in chronic gastric catarrh, in dilatation of the stomach, in acute poisoning, and in postoperative vomiting. In infants with acute indigestion and vomiting the measure is of great value, the size of the tube and quantity of liquid being proportioned to the age of the child. When lavage has to be carried out for long periods, the patient can usually be taught to wash out his own stomach. In most cases the best time is before breakfast.

Duodenal washing has been carried out recently in cases of intestinal indigestion. Special tubes have to be employed, and considerable skill exercised in passing them through the pyloric orifice of the stomach.

LAVAGNA, COUNT OF. See FIESCO, or FIESCHI, G. L.

LAVAL, lă'val'. The capital of the Department of Mayenne, France, situated on the river of the same name, 46 miles east of Rennes (Map: France, N., E 4). The ancient town on the left bank of the river is very picturesque; on the opposite side is the modern town. Laval has a sixteenth-century cathedral, but the principal relic is the old château of the dukes of Laval, used as a prison. Adjoining it, a modern château in Renaissance style is used as the courthouse. Laval also has an old linen hall (used for exhibitions), an art museum, a museum of natural history, and an episcopal palace. Educational institutions include a lycée, a nor-

mal school, a seminary, and a library of 32,000 volumes. Laval is noted for its linen industry, which was introduced there in the fourteenth century. It also manufactures cotton goods, paper, leather, flour, dyestuffs, machinery, trimmed lumber, and marble products. Laval is the seat of a bishop. Pop., 1901, 30,356; 1911, 25,540. The town dates from the ninth century. Near here the Vendéans achieved a victory in October, 1793.

LAVAL, C. G. P. DE. See DE LAVAL.

LA VALETTE, lă vâ'lêt', ANTOINE MARIE CHAMANS, COUNT DE (1769-1830). A French statesman and aid-de-camp to Bonaparte. He was librarian at Ste. Geneviève at the outbreak of the Revolution (1789). He sympathized with the more moderate party in attempting to save the lives of the King and Queen, entered the army, and served with Bonaparte in Italy and Egypt. Afterward he served as Ambassador to Saxony, and was post director and Councilor of State under Napoleon I and again in the Hundred Days. When La Valette had been condemned to death by Louis XVIII, his wife contrived his escape in her clothes on the eve of his intended execution, and she herself perished in the prison. After five years' banishment in Bavaria La Valette was permitted to return. His *Mémoires et souvenirs* (new ed., 1905) are an important source for the history of the First Empire.

LA VALETTE, JEAN PARISOT DE. See VALETTE.

LAVALLEY, lă'vâ'lâ', ALEXANDRE THÉODORE (1821-92). A French engineer, born at Bois-Thillard. He studied at the Ecole Polytechnique, became an officer in the engineers, but resigned from the service, and carried out with Borel part of the work on the Suez Canal. He directed the engineering work of the port, proposing and using powerful dredging machines with great success, and in 1876 undertook the construction of the railroad at Pointe des Galets, Réunion. He published *Communications à la société des ingénieurs civils sur les travaux de l'isthme de Suez* (Paris, 1860-69).

LA VALLIÈRE, lă vâ'lyâr', LOUISE FRANÇOISE DE LA BEAUME LE BLANC, DUCHESS DE (1644-1710). A mistress of Louis XIV of France, born in Touraine, of an ancient and noble family. At an early age she lost her father and was brought to court by her mother, who had married a second time. She was not a great beauty and had a slight lameness; but her amiability and winning manners rendered her attractive. She bore the King four children, of whom two died in infancy. In 1674, after her displacement by Madame de Montespan, she entered the convent of the Carmelites in Paris and spent 36 years there in penance and prayer. She is considered the author of a book entitled *Réflexions sur la miséricorde de Dieu* (Paris, 1680), of which a copy, dated 1688, with corrections by Bossuet, was discovered in the Louvre in 1852. A collection of her letters was published in 1767. A necklace with pendants has been named for her; it is usually spelled lavalier.

LAVAL-MONTMORENCY, lă'vâ'l-môn'mô-rân'sé', FRANÇOIS XAVIER DE (1622-1708). A French bishop. He was born at Laval, France, received the tonsure at the age of nine, was made a priest at 23, and six years later was named Missionary Bishop of Cochinchina. He declined the office, however, and in 1653 was ap-

pointed Archdeacon of Evreux. In 1659 he was sent to Canada as Apostolic Vicar, with the title of Bishop of Petra *in partibus*. He established the Seminary of Quebec (1663) under letters patent of Louis XIV and used his immense influence to direct in large measure the policy of the government, which was one of paternalism. He actively opposed the sale of liquors to Indians. In 1674 he became Bishop of Quebec—an office which he held till 1683, when he resigned and devoted himself to the conduct of the affairs of the seminary. His name is perpetuated in the Laval University at Quebec and is regarded with great veneration by the French Canadians.

LAVAL UNIVERSITY (*Université Laval*). A French Catholic institution in Quebec, Canada, founded in 1852, established and maintained by the Quebec Seminary. By a papal bull of 1876 the university secured extended privileges, and the Cardinal Prefect of the Propaganda was made its protector at Rome. Its doctrine and discipline are in the control of a superior council, composed of the archbishops and bishops of the Province of Quebec, under the presidency of the Archbishop of Quebec, who is the apostolic chancellor of the university. By virtue of its royal charter the visitor of the university is always the Catholic Archbishop of Quebec, with the power of veto over all the rules and nominations. The university council consists of the directors of the Quebec Seminary and the three senior professors of each faculty. There are four faculties—theology, law, medicine, and arts—in each of which the bachelor's, master's or licentiate's, and doctor's degrees are conferred. The theological professors are appointed by the visitor, all others by the council. In 1913-14 the university had 474 students, of whom 156 were in theology, 80 in law, 66 in medicine, and 172 in arts. The faculty numbered 70, and the library contained 140,000 volumes. The extension work of the university is carried on through a branch at Montreal, which is practically independent, and by a system of affiliated seminaries throughout the Province of Quebec. Rector, Monseigneur A. E. Josselin.

LAVATER, lä'vā-tēr, JOHANN KASPAR (1741-1801). A Swiss mystic, founder of what is known as the "art of physiognomy." He was born in Zurich, the son of a physician. As a boy, he showed no remarkable aptitudes, though in youth he gave proof of power by coming forward in 1762 with the artist Henri Fuseli to accuse the Landvogt Grebel of oppression and injustice, under which others had groaned without daring to complain. A volume of poems entitled *Schweizerlieder* (1767) early gained for Lavater a great reputation. *Aussichten in die Ewigkeit* (3 vols., 1768-73), his next publication, speedily ran through several editions. The tone of his work is one of exalted religious enthusiasm, mingled with asceticism; for Lavater was a mystic both in theology and philosophy. This gave to his opponents an opportunity to accuse him of all manner of heresy. Possessing the keenest powers of observation and the most delicate discrimination of human traits, Lavater came to believe that the character of men could be discovered in their countenances. He labored to form a system of physiognomy, hoping thus to promote the welfare of mankind, and at last published the work upon which his fame chiefly rests, *Physiognomische Fragmente zur Beför-*

derung der Menschenkenntniss und Menschenliebe (4 vols., 1775-78). Lavater at first hailed the French Revolution with joy, but after the murder of the King he regarded the whole movement with religious abhorrence. At the capture of Zurich by Masséna, while aiding the wounded in the street, Lavater himself received a wound, from the effects of which he died.

LAVATER, LOUIS. The pseudonym of the Alsatian historian Ludwig Adolf Spach (q.v.).

LA VAULX, là vò, HENRY, COUNT DE (1870-). A French aeronaut and writer, born at Bieville. He visited the United States in 1905 and by his lectures on aeronautics aroused an interest which led to the establishment of several aero clubs. The owner of dirigible balloons and aéroplanes and holder of several long-distance records, he was elected to office in various aeronautic societies and was sent on scientific missions by the French government. He published: *Seize mille kilomètres en ballon* (1901); *Voyage en Patagonie* (1901), crowned by the French Academy; *Cent mille lieues dans les airs* (7 vols., 1904-05), *Le tour du monde de deux gosses* (1909), *Le tour du monde en aéroplane* (1910), the last three books in collaboration with A. Galoupin; *Le triomphe de navigation aérienne* (1912).

LAVEDAN, là've-dān', HENRI (1859-). A French novelist, dramatist, journalist, and critic. He began his career as a journalist and story-writer, but soon turned to the drama, in which he did his best work. The work of a moralist and keen observer, his plays show much satirical power. He has depicted the gay life of Parisian society, the nobility as a class, problems of domestic life, and historical episodes. In 1898 he was elected to the Academy. The best known of his tales are *Leur beau physique* (1894); *Leurs sœurs* (1895); *C'est servi* (1904), *Baignoire 9* (1905). His plays, beginning with *Une famille* (1891), include *Le nouveau jeu* and *Catherine* (1892); *Le prince d'Aurec* (1894); *Le vieux marcheur* (1895); *Les deux noblesses* (1897); *Le marquis de Priola* (1902); *Viveurs* and *Varennnes*, with G. Lenôtre (1904), *Le duel* (1905), produced in New York in 1906; *Le bon temps* (1906); *Sire* (1910), seen in New York in 1911, *Servir* (1913).

LAVELEYE, là'v'-là', EMILE DE (1822-92). A Belgian political economist and publicist, born at Bruges. He studied at Ghent and in 1864 was made professor of political economy in the University of Liège. He was a member of the international jury at Paris, 1867, and a corresponding member of the Academy of Moral and Political Sciences of Paris. Laveleye wrote much for the *Revue des Deux Mondes* and other periodicals. His most important works are: *De la propriété et ses formes primitives* (1874); *Le socialisme contemporain* (1881); *Éléments d'économie politique* (1882); *Le gouvernement dans la démocratie* (1891); *La monnaie et le bimétallisme internationale* (1891).

LAVELLE, là-vél', MICHAEL J. (1856-). An American Roman Catholic prelate. Born in New York City, he graduated there from Manhattan College in 1873 and from St. Joseph's Seminary, Troy, N. Y., in 1874, and was ordained to the priesthood in 1879. He became assistant in 1879 and rector in 1886 of St. Patrick's Cathedral, New York City, was appointed Vicar-General of New York in 1902, and in 1903 was made domestic prelate to Pope Pius X with the

title of Monsignor. For seven years he was president of the Catholic Summer School of America.

LAVENDER (ML. *lavandula*, *lavendula*, lavender, from It. *lavanda*, lavender, washing, from It., Lat. *lavare*, to wash; connected with Lat. *luere*, Gk. *louein*, to wash), *Lavandula*. A genus of plants of the family Labiatae, having the stamens and style included within the tube of the corolla, the corolla two-lipped—the upper lip bifid, the lower trifid. The common lavender or narrow-leaved lavender (*Lavandula vera*) grows wild on stony mountains and hills in the south of Europe, and in more northern regions is very generally cultivated in gardens. It has an aromatic fragrance, aromatic bitter taste, and contains a volatile oil, oil of lavender. The whole plant is credited with

LAVENDER.

stimulant properties, but particularly the flower spike, and is used in medicine as a tonic, stomachic, nerve stimulant, etc. Lavender flowers are often put into wardrobes to keep away moths. They are much used in perfumery. Lavender is extensively cultivated for its flowers in France and in some places near London. Broad-leaved lavender (*Lavandula spica*) is also a native of the south of Europe, but is more tender than common lavender. It is also less fragrant, and the oil which it yields is called oil of spike and sometimes foreign oil of lavender. Arabian lavender (*Lavandula stoechas*) yields an inferior oil for varnish. Lavender is grown frequently in gardens in the United States, especially in California, but nowhere as yet on a commercial scale.

LAVER, or SLOKE. See CARRAGEEN.

LAVÉRAN, là'v'-rân', CHARLES LOUIS (1812-79). A French military physician, born at Dunkirk. He studied at Lille, was assistant at the hospital of Algiers and professor at the military hospital at Metz (1841-50), whence he returned to Algeria. At the reorganized Ecole Val de

Grâce he became professor of epidemiology, physician in charge, and director. After acting as sanitary inspector of the Army of the North in the Franco-Prussian War, he was for a time head of the military school at Montpellier, but in 1872 went back to Val de Grâce as chief director. His great work, *Traité des maladies et des épidémies des armées*, published in 1875 by his son (q.v.), is largely supplemented by his contributions to medical journals and to the *Dictionnaire encyclopédique des sciences médicales*.

LAVÉRAN, CHARLES LOUIS ALPHONSE (1845-). A French physician, the discoverer of the plasmodium of malaria. He was born in Paris, the son of Charles Louis Laveran. He entered the School of Military Medicine at Strassburg in 1863, taking his degree in 1867. Six years later he was appointed professor at Val de Grâce. In 1878 he left for Algeria to investigate malarial fevers and remained there until 1883, when he returned to Val de Grâce to occupy the chair of military hygiene and clinical medicine until 1894. He then held the post of director of the Eleventh Corps in the Army Medical Service, retiring in 1897. Subsequently he became physician in chief at the Lille Hospital and a member of the French Academy of Medicine. In 1907 he was awarded the Nobel prize for medicine. He wrote several treatises on malaria, summarized in *Traité des fièvres palustres* (1884), which announced the discovery of the hæmatozoön of malaria, and obtained the Bréant prize. He also published: *Traité des maladies et épidémies des armées* (1875), written by his father; *Eléments de pathologie médicale* (1894), in collaboration with Teissier; the article "Maladies épidémiques" of the *Traité de pathologie générale* of Professor Bouchard; *Traité de hygiène militaire* (1896); *Paludisme et trypanosomiasé* (1905); *Traité du paludisme* (1898); *Trypanosomes et trypanosomiasés*, with F. Mesnil (1904; Eng. trans. by Nabano, 1907). See MALARIA.

LA VERANDRYE. See VERANDRYE, LA.

LAVÉRIÈRE, là'vër'dyâr', CLAUDE HONORÉ (1826-73). A Canadian educator and author. He was born in the Province of Quebec and was educated for the priesthood, to which he was ordained in 1851. He afterward became a professor in the Quebec Seminary and assistant librarian of Laval University. He did much to bring to light and to popularize the achievements of the early heroes of French Canada. Three volumes of the *Jesuit Relations* (1858) were in part published by him, and he edited the *Voyages of Champlain*, with notes and a life of that explorer (1870); also the *Journal des Jésuites* (1871). He also produced a popular *History of Canada* and edited a collection of French-Canadian songs and hymns.

LA VERGNE, là vër'nyâ', M. M. P. DE. See LA FAYETTE, COUNTESS DE.

LAVÉRNA. In Roman mythology, originally a goddess of the underworld, later a goddess of darkness, the protecting goddess of thieves and impostors, who love darkness. The Porta Lavernalis, on the southern slope of the Aventine, near which an altar was erected in her honor, was named for her. She had a grove also on the Via Salaria, which ran northeast from Rome into the Sabine territory. Consult Horace, *Epistles*, i, 16, 60, and the editors on the passage, and Georg Wissowa, *Religion und Kultur der Römer* (2d ed., Munich, 1912).

LAVERY, làv'ér-I, JOHN (1857-). A

Scottish portrait, figure, and landscape painter. He was born in Belfast, Ireland, but was brought up in Scotland and studied at the Glasgow Art School, at Heatherley's, London, and later in Paris under Bouguereau and Fleury. He first attracted attention with his "Game of Tennis" (Munich Pinakothek), exhibited at the Academy in 1886, and two years later was commissioned to paint "The State Visit of Queen Victoria to the Glasgow Exhibition of 1888" (Glasgow Art Gallery). After traveling extensively in northern Africa and on the Continent, where he is perhaps more highly esteemed than in England, he made his headquarters in London. His art, which owes much to Whistler, Manet, and Velazquez, is brilliant, unemotional, elegant in design, and subtly harmonious in color; this, subdued in his earlier works, later increased in richness. His portraits of women, for which he is best known, appeal particularly through their unity of effect and tender piquancy, but, while distinctly personal, are often superficial in characterization. Among the most celebrated of his pictures are: "A Lady in Black" (1893, National Gallery, Berlin), "A Garden in France" (1897, Philadelphia Academy Spring, 1903, Luxembourg), "Lady in Pink" (Venice Gallery); "Mary in Green" (1904, Ottawa Gallery); "Polymnia" (1904, National Gallery, Rome), "The Sisters" (1904); "Miss Elsie as the 'Merry Widow'" (1907, Santiago, Chile); "Eileen" (1909); "Girls in Sunlight" (1910). One of his most successful portraits of men is that of R. Cunningham Graham (1894, Glasgow Art Gallery). A portrait of himself is in the Uffizi, Florence (1911). Lavery also painted admirable landscapes, as "The Bridge at Grès" (1883, Carnegie Institute, Pittsburgh) and many fine studies of Morocco, including "The Market Place" and "A Moorish Harem." Further examples of his versatility are furnished by a decorative panel and lunette in the Banqueting Hall of the Glasgow Municipal Buildings and two historical paintings, "Night after the Battle at Longside" (Brussels Museum) and "Dawn." A number of his pictures were exhibited in New York in 1915. Lavery received various decorations, and gold medals at Brussels, Paris, Vienna, and the Carnegie Institute, Pittsburgh. Consult Christian Brinton, *Modern Artists* (New York, 1908), and W. S. Sparrow, *John Lavery and his Work* (London, 1911).

LAVES, lá'vès, KURT (1866-). An American astronomer. He was born at Lyck, Germany, where he graduated from the Royal Gymnasium of the Humanities in 1886, and he studied at the universities of Königsberg (1886-87) and Berlin (Ph.D., 1891). In 1893 he joined the faculty of the University of Chicago, where he became associate professor of astronomy in 1908. The subjects to which he devoted particular attention were the lunar equation and the solar parallax, effective potential forces, Jacobi's partial differential equation, Maupertius' principle, a graphic method to determine orbits of spectroscopic binaries, and problems of three bodies in spectroscopic systems.

LAVEZARIS, lá'və-thá'rés, or **LABAZARES**, GUIDO DE (1510-80). A Spanish adventurer, born in Bilbao. With New Spain as a starting point, he went on a voyage of conquest to the Spice Islands (1542) and was unwillingly detained there for about six years. In 1558 he explored the Gulf coast of the United States from Vera Cruz to Florida and discovered and

named a bay, Filipina (probably Mobile Bay). This was rechristened Santa Maria by Luna de Arellano the following year, when Lavezaris was his companion. In 1564 Lavezaris was appointed royal treasurer to accompany the expedition of Legazpi for the conquest and conversion of the Philippines. Lavezaris succeeded to the governorship in 1572, upon the death of Legazpi. He fortified Manila to withstand a long siege by Chinese pirates and ultimately drove them and the Dutch corsairs from the surrounding islands. On the arrival of the new Governor-General (1575), Lavezaris yielded the chief position, but remained in Manila as Lieutenant Governor until his death. His accounts of the Florida and Philippine voyages were published by the Madrid government (1578). Consult H. Ternaux-Compans, *Voyages, Relations, et Mémoires*, vol. xx (Paris, 1841); P. J. Hamilton, *Colonial Mobile* (Boston, 1898); Blair and Robertson, *Philippine Islands* (Cleveland, 1903-09).

LAVIGERIE, lá'və'zhre', CHARLES MARTIAL ALLEMAND (1825-92). A French Roman Catholic prelate and missionary. He was born at Bayonne, was educated in the schools of the Petite Séminaire and the Séminaire de Saint Sulpice, Paris, and was appointed professor of ecclesiastical history at the Sorbonne in 1853, domestic prelate to the Pope, French auditor in Rome, Bishop of Nancy, in 1863, and Archbishop of Algiers in 1867. He had previously become an Officer of the Legion of Honor and in 1874 established his famous Central-African mission, founding the orders of White Fathers and White Sisters for work from Algiers southward. In 1881 he was appointed administrator of ecclesiastical affairs in Tunis and in 1882 was made Cardinal. Lavigerie devoted the best energies of his life to the suppression of slave hunting and slave barter; he lectured to great audiences in the various European capitals and finally secured the agreement between the English and German governments to enforce rigidly the anti-slavery clause of the Congo Conference and to call an international congress at Brussels to determine on a plan of international action. In 1890 he created a sensation in France by a speech advocating the acceptance of the Republic by the church, in which it was later shown he expressed the wishes of Pope Leo XIII. He died in Algiers, Nov. 26, 1892. His *Œuvres choisies*, principally relating to missionary and antislavery efforts, were published in two volumes (Paris, 1884).

Félix Klein, *Le Cardinal Lavigerie et ses œuvres d'Afrique* (Tours, 1897); Louis Baunard, *Le Cardinal Lavigerie* (Paris, 1898); Louis d'Annam, *Le grand apôtre de l'Afrique au XIXe siècle; ou, Vie de son Eminence le Cardinal Lavigerie* (ib., 1899); Vicomte de Colleville, *Le Cardinal Lavigerie* (ib., 1905); J. B. Piolet, *Les missions d'Afrique* (ib., 1908); J. Tournier, *Le Cardinal Lavigerie et son action politique, 1863-92* (ib., 1913); id., *Bibliographie du Cardinal Lavigerie* (ib., 1913).

LAVIGNAC, lá'ven'yák', ALBERT (1846-). A French writer on music, born in Paris. He received his musical education in that city and in 1882 became professor of solfeggio at the Conservatory. He was subsequently made professor of harmony and awakened wide interest by championing the cause of musical dictation, for the furtherance of which he wrote *Cours complet théorique et pratique de dictée*

musicale (1882). Among his best-known works are: *La musique et les musiciens* (1895; Eng. trans., 1899), which is a standard on the subject; *Le voyage artistique à Bayreuth* (1897), later expanded and translated into English as *The Music-Dramas of Richard Wagner* (1898); *Les guités du Conservatoire* (1900); *L'Éducation musicale* (1902); *Notions scolaires de musique* (1905). He became the editor in chief of a voluminous *Encyclopédie de la musique*, the first volume of which appeared in 1913.

LA VILLEMARQUÉ, lá vél'mär'ká', THÉODORE CLAUDE HENRI HERSART, VICOMTE DE (1815-95). A French antiquary and Celtic scholar, born at Quimperlé, Brittany. His first important work was a collection of popular Breton songs and melodies, in two volumes, published in 1839, with a French translation and notes, under the title of *Barzas-Breiz* (9th ed., 2 vols., 1892). Three years afterward appeared his "Popular Tales of Brittany," in two volumes, to which was prefixed a dissertation on the story of the Round Table. His next work was a collection of the poems of the Celtic bards of the sixth century with a French translation, and explanatory and critical notes (1850; 2d ed., 1860). This publication made the labors of La Villemarqué widely known. In 1851 he was elected corresponding member of the Academy of Berlin and in 1858 a member of the French Institute. Afterward he published a work entitled the "Celtic Legends" (*La légende celtique*) of Ireland, Cambria, and Brittany, which contains such of the original texts—Irish, Welsh, or Breton—as are rare or unpublished (1859). La Villemarqué is the author or editor of several other works connected with the Celtic literature and languages, among which are a *Breton Grammar* (1849); *Les bardes bretons, poèmes du VI^e siècle* (Paris, 1850; new ed., 1860); a *Breton and French Dictionary* (2 vols., 1847-50); *Les romans de la Table Ronde* (1842; 4th ed., 1861); *Brittany, Ancient and Modern*; *The Great Mystery of Jesus* (1865; 2d ed., 1866), a Breton drama of the Middle Ages.

LAVINIA. In Roman tradition, the daughter of Latinus (q.v.) and wife of Æneas, who named in her honor the newly built town of Lavinium.

LAVINIA, or **CIVITÀ LAVINIA**, ché'-vé-tá lá-vé'nyá. See LANUVIUM.

LAVINIUM. A very ancient town of Latium, about 19 miles southeast of Rome, where the modern village of Pratica stands. Legend states that it was founded by Æneas and named in honor of his wife, Lavinia, daughter of King Latinus. With the growth of population, said the tradition, the town became overstocked, and Ascanius, or Iulus, son of Æneas, led away part of the inhabitants and founded Alba Longa, the traditional mother city of Rome. Lavinium was renowned in very early times for its sanctuary of Venus and for its cult of the tutelary gods of the Latin League, of which it became a sort of religious centre. Like other important Latin towns of the earlier period, it gradually lost its prestige with the growth of Rome. The Emperor Trajan (98-117 A.D.) gave it a new lease of life by joining the colonies of Laurentum and Lavinium, under the name Lauro-Lavinium, and locating there new colonists. It should be noted that the modern Civita Lavinia is on the site of the ancient Lanuvium, not on that of Lavinium.

LAVISSE, lá-vés', ERNEST (1842-). A

French historian, born at Nouvion-en-Thiérache, Aisne. He was educated at a classical school in Paris and at the Superior Normal School, and received a fellowship in history in 1865. He taught for 10 years in the lycées at Nancy, Versailles, and at the Collège of Henry IV; was then appointed master of conferences at the Superior Normal School, and in 1888 became professor of modern history in the Faculty of Letters at Paris. In 1892 he was elected to the French Academy. He is distinguished alike for the clearness and carefulness of his elementary works and for the authoritative character of his researches. His lectures, the most popular at the University of Paris, and his extensive contributions to historical literature, won for him a high place among French historians. In both he strove to foster a better feeling between France and Germany. Among his published works are: *La marche de Brandebourg sous la dynastie ascanienne, étude sur l'une des origines de la monarchie prussienne* (1875); *Leçons préparatoires d'histoire de France* (1876); *Études sur l'histoire de Prusse* (1879), crowned by the Academy; *La première année d'histoire de France* (1883), Sully (1880); *Trois empereurs d'Allemagne* (1888); *Histoire de France et notions d'histoire générale* (1890), with M. Duruy; *Vue générale de l'histoire politique de l'Europe* (1890); *La jeunesse du grand Frédéric* (1891). With Rambaud he edited and contributed largely to the *... générale du IV^eme siècle à nos jours*. In 1900 he became the editor of a monumental *Histoire de France* in nine volumes, completed in 1911. In 1909 appeared the fourth edition of his *Essais sur l'Allemagne impériale*, and in 1912 *Souvenirs, reminiscences* written in a charming vein.

LAVOISIER, lá'vwá'zyá', ANTOINE LAURENT (1743-94). The founder of modern chemistry. He was born in Paris and was educated at the Collège Mazarin. He showed great aptitude for the mathematical and physical sciences, studying mathematics under Abbé Lacaille, botany under Jussieu, and chemistry under Rouelle. He then traveled through France with Guettard, who was at the time engaged in important geological work. As early as 1768 Lavoisier became a member of the Academy of Sciences, and in the following year he obtained a post as farmer-general of the revenue, by which he was enabled to devote most of his time to research work. Between 1772 and the year of his death Lavoisier worked out the principles forming the cornerstone of modern chemistry and during this time held several important positions. In 1776 he was made director of powder works and introduced valuable improvements in the manufacture of gunpowder. In 1778 he was appointed one of the trustees of the Bank of Discount. In 1790, as a member of the Commission of Weights and Measures, he was engaged in preparing the decimal system. In 1791 he was commissary of the treasury and published an interesting paper on the economic condition of France. The farmers-general of the revenue were men of eminent social position and considerable wealth, and in the Reign of Terror their wealth became a source of great danger to them. In 1794 Dupin, one of the members of the Convention, accused them of being enemies of their country; Fouquier-Tinville presented the accusation before the Revolutionary Tribunal, and the 27 farmers-general were condemned to die. In vain had one of Lavoisier's friends endeavored to produce an

impression on the Tribunal by describing his scientific achievements. The answer was, "We need no more scientists in France."

At the very foundation of all chemical thought is the law of the conservation of mass. Lavoisier, although not the first to divine that matter is everlasting, was the first to understand that that important truth must be established inductively by the use of the balance. By a series of quantitative experiments Lavoisier proved that, whatever the change in kind, the total amount remains the same; and as all relations of quantity are mathematical relations, Lavoisier saw that every chemical change could be expressed by an equation showing that the sum of the masses of the reacting substances is equal to the sum of the masses of the resulting products. When iron, mercury, tin, and other metals were exposed to the action of the air, their weight increased. The resulting earths contained, besides the matter of the metals, other matter and could naturally be split up again into their constituents; they were therefore complex, not simple substances. The quantitative method of Lavoisier thus threw light on the nature of various substances and led to a clear definition of the idea of chemical elements. Lavoisier also advanced a general theory of the formation of chemical compounds. According to this theory all compounds have a binary constitution. A binary compound of the first order is one made up of two elements. A binary compound of the second order is formed by the union of two binary compounds of the first order. The acids formed by the union of sulphur, nitrogen, phosphorus, and similar substances with oxygen are binary compounds of the first order. Acids are neutralized by bases with formation of salts; therefore salts are binary compounds of the second order. In subsequent times the binary theory proved inadequate and had to be abandoned. It had not lived, however, without giving birth to a series of important results. Since bases were classed by it as compounds of oxygen with metals, chemists were led to search for methods of isolating the latter by decomposing the bases. Thus came the discovery of the alkali and the alkaline earth metals by Davy and the isolation of aluminium by Wöhler, the importance of which for both science and the industries is inestimable. Another important work, in the perfection of which Lavoisier took an active part, must be mentioned here. Little progress could be made in chemical thought without the aid of a system of names which might constantly remind of the composition and properties of compounds. In conjunction with Berthollet, Fourcroy, and Guyton de Morveau, at the instance of the last named, Lavoisier devised a system of rational nomenclature, which is in its main features still used in the chemistry of to-day.

All of his ideas were based on observations which had already been made by others. It is a sad but well-established fact that he often published such observations as his own. But the shadow of his petty scientific plagiarism dwindles into nothing in the light of the brilliant achievements which were indisputably his.

Lavoisier's works include: *Sur la combustion en général* (1777); *Réflexions sur le phlogistique* (1777); *Considérations sur la nature des acides* (1778); *Mémoire sur l'affinité du principe oxygène avec les différentes substances auxquelles il est susceptible de s'unir* (1782); *Méthode de nomenclature chimique* (jointly

with Guyton de Morveau, Berthollet, and Fourcroy, 1787); *Mémoire sur la respiration des animaux* (jointly with Séguin, 1789); *Traité élémentaire de chimie* (2 vols., 1789), giving a list of 33 elementary substances, including caloric and light; *Opuscules physiques et chimiques* (1774 and 1801). In 1789 he founded the *Annales de chimie*. Two volumes of his *Mémoires de chimie* were published posthumously in 1805. His complete works have been published by the French government under the title *Ouvrages de Lavoisier publiés par les soins de Son Excellence, le Ministre de l'Instruction Publique* (6 vols., 1864-93).

Bibliography. Numerous accounts of Lavoisier's life and work have been written. An admirable sketch of his achievements is given in C. A. Wurtz, *Dictionnaire de chimie pure et appliquée*, Introduction (Paris, 1868); consult also: Edouard Grimaux, *Lavoisier d'après sa correspondance, ses manuscrits, ses papiers de famille et d'autres documents inédits* (ib., 1888); P. Berthelot, *La révolution chimiques: Lavoisier, suivi de notices et extraits des registres inédits de laboratoire Lavoisier* (ib., 1892); Ernst Schultze, *Lavoisier, der Begründer der Chemie* (Hamburg, 1894); Max Speter, *Lavoisier und seine Vorläufer: eine historisch-kritische Studie* (Berlin, 1910); T. E. Thorpe, *Essays in Historical Chemistry* (New York, 1911).

LA VOISIN, là vwa'zân' (?-1680). A French sorceress. Her real name was Catharine Monvoisin. She played a prominent part in the famous *Affaire des Poisons*, during the reign of Louis XIV. She practiced fortune telling, sorcery, midwifery, and medicine, and had as clients many women prominent in court circles. She is said to have attempted to poison Louise de la Vallière, the King's mistress, at the instigation of the Countess of Soissons. Poisoning had become so common that a royal commission was appointed to bring the professional poisoners to justice. The commission met in April, 1679. La Voisin was one of the first criminals; after being tortured, she was executed in February, 1680. A great number of her accomplices and of other poisoners were similarly dealt with, although the revelations made to the commission implicated persons so close to the King that many of the guilty were able to escape. Consult: François Ravaissou, *Archives de la Bastille*, vols. iv-vii (Paris, 1870-74); F. Funck-Brentano, *Le drame des poisons* (ib., 1900); A. Masson, *La sorcellerie et la science des poisons au XVII^e siècle* (ib., 1903).

LAVROV, lāv-rōf', PETER LAVROVITCH (1823-1900). A Russian revolutionist, scientist, and philosopher. He was born of well-to-do parents in the Province of Pskov. At 14, after a good home education, he entered a military academy, becoming an army officer on graduation in 1842. Then for 22 years he was instructor in mathematics, of which he was passionately fond. He was almost equally well versed, however, in natural science, history, logic, psychology, and philosophy. In 1862 he entered the revolutionary movement by joining the Land and Liberty party. Four years later he was arrested for his prorevolutionist sympathies and in 1868 exiled to the Urals, whence, however, he soon escaped and went abroad, living mostly in Paris. In 1871 he visited Belgium and England in behalf of the Paris Commune, and from 1873 to 1877 edited his Socialist review, *Forward*, in which

Russian political events received special attention. While abroad he kept actively in touch with the Russian movement, contributing anonymously to the progressive periodicals and founding several political organizations bent upon Russian emancipation. Lavrov's very numerous articles and pamphlets, the product of more than 40 years of prolific writing, cannot be mentioned here. Among his longer works are: *The Hegelian Philosophy* (1858-59), an admirable exposition; *An Attempt at a History of Modern Thought* (2 vols., 1859), an important though uncompleted contribution to evolutionary philosophy; *An Outline of the Physico-Mathematical Sciences* (1866); *Studies in the Problems of Practical Philosophy* (1860), a work of extraordinary penetration; and *Historical Letters* (1879), written while the author was in exile and published under the pseudonym of Mirtov. It is this last that has particularly endeared Lavrov to Russian readers for its strong personal note and its good practical suggestions. These letters have greatly influenced the course of revolutionary activity in Russia, for their author was a firm believer in reform from within, not from without; "Educate the people" was his great principle of propaganda. Consult K. Tarassoff, "Peter Lawroff," in *Die Neue Zeit*, vol. xviii (1st series, Stuttgart, 1899-1900).

LAW (AS. *lagu*, from *liogan*, Goth., OHG *lgan*, Ger. *legen*, to lie, connected with OChurch Slav. *lezhati*, to lie, Lat. *lectus*, couch, Gk. *λόχος*, *lochos*, lair). In the widest sense, a constant sequence of events related as cause and effect. In this sense a law may be defined as the statement of such a causal relation. In a more restricted sense, as applied to the life of man in society, law is the body of observances, conventions, and rules which define the social organization and determine the relations of its members to such organization and to one another. In the narrowest sense, of "positive law," it is the aggregate of the rules of human conduct which the state, through its political organization, regularly enforces by means of appropriate agencies directed by it.

The end of law in society is the regulation of the life of the individual in accordance with the will of the community—in other words, to secure conformity to the standards of social life which the community deems essential to its well-being. In most instances obedience to this law is secured through social pressure, i.e., by the threat of social ridicule, or contempt, or scorn, or ostracism. These methods of compulsion may be described as moral or social sanctions, and the law so enforced as moral or social law. Of this class are the so-called laws of honor, of etiquette, of morality, and the like. But there is a point where the moral law breaks down, where the social sanction fails to secure the necessary or the desired conformity; and at this point the state steps in and supplements the milder social sanction by the sanction of physical force.

Many rules which govern the social life—the majority of the rules which govern the intercourse of individuals—are at the same time rules of morals and rules of law; but law and morals have each a distinct field. There are social rules which cannot be enforced by any but moral penalties, and many more which it would be unwise to attempt to enforce by the ruder processes of the positive law; and there

are many cases in which the social interest requires that a rule shall be established and enforced, but in which it is ethically immaterial what the rule shall be.

Early Custom and Law. The beginnings of law are found in social habit or custom. Custom is simply observance of precedents. Precedents are made by acts and forbearances. Whenever a power is exercised or a state of things is maintained by the community itself, or by individuals with the acquiescence of the community, a precedent is established. In early custom, religion, morals, and law are blended or imperfectly differentiated. Some of the rules of early custom, however, deal with matters which are regarded in modern times as legal, and of these quasi legal rules some are enforced by physical coercion, the transgressor being lynched or sacrificed to the gods or expelled from the community (outlawry). Other violations of custom which are not felt to be injurious to the whole community are punished by the injured kinship group or by the injured individual with the aid of his kinsmen (self-help, vengeance, feud). So long as such acts of redress or vengeance, although regarded as rightful, may lead to further retaliation, the sanction behind the rules of custom is still purely moral, but when the community begins to protect the persons who in its opinion have obtained due redress or taken rightful vengeance, these persons become in reality agents of the community, and the sanction behind the rules which they enforce may fairly be called legal. Self-help, thus ordered, meets the needs of early society in all cases in which the right to be enforced is clear, and its violation apparent, but it does not furnish any mode of settling controversies. This open place is filled by oaths, by ordeals, by arbitrations, and at last by authoritative judgments. (For the beginnings of jurisdiction, see COURT.) When courts are once established, custom gains not only an authoritative interpretation, but a development which, however slow, is far more rapid than was previously possible. Within the field over which the courts have jurisdiction, the growth of customary law is henceforth accomplished by decisions; its rules are found in the tradition or in the recollection or in the written record of judicial precedents. Popular custom is thus supplanted by judicial custom. In legal theory, however, precedents or decisions are not law, but only evidences of the law; and even when they are written, the law which is found in them is said to be "unwritten." This is still the theory of the courts as regards English common law, although it is well recognized that the common law is judge-made law.

At what point of development early custom shall be regarded as law is substantially a dispute over words. The decision depends upon the definition of law. The Austinian definition of a law as a command emanating from a definite sovereign would include few rules of early custom; but those who find the essential element of law in the sanction will recognize in the most primitive custom a core of law.

Equity. With the establishment of judicial and legislative authorities, the factors that produce law in modern times are already operative. There is, however, an intermediate stage of development, noticeable both in Roman and in English legal history, which is known as equity. Neither the Roman prætors nor the English

chancellors in developing new law laid down hard and fast rules, like legislators, they found law in the decision of single cases, like judges; but they did not regard themselves as bound by the precedents by which the administration of justice had previously been controlled. The new rules that were applied were not at first regarded as law, but rather as arbitrary assertions of governmental power. When, however, as happened both at Rome and in England, equity, following its own precedents, developed a new body of judicial custom, it was recognized that this custom was law. In England and in the United States equity is recognized as judge-made law, and it is often included in the term "common law." See *EQUITY*.

Legislation. In an advanced stage of social progress legislation tends to become an increasingly important agency of legal development. A large part of the Roman Imperial law, however, even in its latest development, was still judge-made law or case law, and in modern times countries not only does much rest upon judicial precedent (common law), but its development is still in the hands of the judiciary. The attempt in modern European states to put all the law into legislative or statutory form seems to be due to exceptional circumstances (see *CIVIL LAW, CODE*); and even in modern European law, although it is commonly denied that decisions make law, the persistent judicial practice by which open places in the written law are filled and new rules found to govern cases which the legislator could not, or at least did not, foresee, is practically treated as law.

Public Law. Not only the relations of individuals and of private associations to each other, but also the organization of the state and of government, and the relations of the different branches of government to each other, are governed by law. This part of the law—constitutional law—is usually, until a comparatively late stage of political development, mainly customary. Acts and forbearances; the exercise of powers to which the community submits or limitations imposed upon power to which the government submits, contests between different branches of the government which end in a one-sided triumph or in reciprocal concessions—these are the precedents which make constitutional custom. In these matters the courts of justice have in most countries no jurisdiction; even in the United States they do not interfere in questions which they regard as political. At the present time nearly all civilized nations have written constitutions; but the development of these written constitutions is still carried on, as in former times, by the establishment of new customary law.

The methods in which governmental power may be exercised, the rights and duties of governmental officers, the relations between government and private persons—these matters are regulated by administrative law. This branch of the law, originally developed by the constant practice or custom of the government, becomes at a comparatively early period a subject of legislation, and in modern times controversies between the administration and private persons are regularly within the jurisdiction of the ordinary courts or of special administrative courts. Administrative legislation is therefore supplemented by judicial custom, i.e., by the customary interpretation of the courts. The

customary practice of administrative agencies, however, has not ceased to be a source of administrative law. See *PUBLIC LAW*.

International Law. Even in its most modern developments international law is almost wholly customary. The precedents on which it rests are the acts and forbearances of independent governments in their relations with one another. It resembles national custom in a very early stage of development; for behind many of its rules there is only a moral sanction, viz., the public opinion of the civilized world. It is true that international law is now generally recognized as a part of the law of each state, and that its rules are enforced by each state against individuals within its jurisdiction; but against an offending state the ultimate remedy is still self-help and international feud, i.e., war, and it is not yet usual for neutral states to give more than moral support to the state that is waging a rightful war. The jurists who refuse to recognize early national custom as law are therefore obliged to deny that international custom is law in the strict sense of the word. Those, however, who find the essential characteristic of law in its sanction point out that rules of international law may be, and sometimes are, enforced by the concerted action of the powers (joint intervention); and that any state which should persistently violate the rules of international law would assuredly be excluded from its benefits, i.e., it would be outlawed. There is also, in international relations, the beginning of legislative action in the form of general compacts (declarations of congresses); and there is the growing practice of judicial decision in the growing practice of arbitration, and in the recent establishment of a permanent tribunal at The Hague to which international disputes may be referred. See *INTERNATIONAL LAW; WAR, WAR IN EUROPE*.

Abrogation of Law. That legislative rules are abrogated by repeal and by contrary legislation; that customary law is put out of force by contrary legislation, by change of custom, and by general nonobservance (desuetude)—these facts are universally admitted. That legislation may lose its force and become "a dead letter," by the development of contrary custom or by desuetude, was affirmed by the Romans, but is generally denied by modern jurists. The history of law, however, is full of examples of the disappearance of written law in consequence of persistent nonobservance; and even in modern times it is not difficult to discover statutes that have never been repealed or superseded and are yet never enforced. When the administrative branch of law is independent of the legislative, it can be enforced only on the initiative of the administration may easily become dead letters by persistent administrative inaction; and this is particularly likely to happen when the law is not supported by public opinion.

Application of Law. Early law is tribal, i.e., the individual is subject to its authority and entitled to its benefits because of his membership in a tribe. With the formation of wider political associations law becomes national. Under either system the stranger or foreigner is out of the law, unless its protection be extended to him through a member of the tribe or nation or by virtue of a treaty.

Early law is also religious; it applies only to the members of a particular cult. Where many tribes have a common religion, the re-

ligious law may give a certain protection, within each tribe, to strangers of the same cult. Differences of religion are not found in early times among the members of a tribe; but with the formation of wider political unions different cults may be brought under a common sovereignty, and different rules may be applied to the adherents of the various cults. This is the case to-day in British India. In some of the European states, as late as the nineteenth century, Jews were allowed to live by their own law as far as their family relations were concerned; and in Austria at the present time divorce is refused to Catholics, although it is granted to non-Catholics.

The law of the modern state (which is sometimes, but not very appropriately, termed "municipal" law) is strictly national only as regards political rights and duties, which are confined to citizens or subjects (nationals). In all other respects it is territorial; it governs all persons within the jurisdiction of the state, whether they are nationals or aliens. A few private rights are withheld in some countries from aliens, but in general the alien enjoys the same private rights as the national. An exception to the rule that law is territorial is found in the institution of extritoriality (q.v.). In many cases, finally, the territorial law itself not only permits but requires the application of foreign law by its own courts. See CONFLICT OF LAWS.

Classification of Law. All law may be divided into two classes—substantive law and adjective or remedial law. Substantive law defines the normal relations of social life; adjective or remedial law defines and deals with abnormal conditions, with violations of the legal order. Substantive law is divided and subdivided according to the character of the relations with which it has to do. Public law is concerned with the state and with government and with relations to which the state is a party; private law, with private persons and the relations between them. Public law is subdivided, as has already been noted, into international, constitutional, and administrative law. Private law classifies persons (natural and artificial or juristic) according to their legal capacity, and it deals with things as the objects of private right. The principal groups of private relations are property, family, and succession. In the field of property law we distinguish the law of things, the law of debts or obligations (contracts and quasi contracts), and the law of monopolies (copyrights, patents, etc.). Family law includes the relations of husband and wife, parent and child, guardian and ward. (The law of master and servant once belonged in the law of the household; with changed social relations it has passed into the law of contractual obligations.) The law of succession has to do with what may be called a normal disturbance of property relations; it provides for the continuance and readjustment of the property relations to which a deceased person was a party. When this readjustment is effected in accordance with the will of the decedent, we speak of testamentary succession; when it is effected by the law in the absence of any validly expressed will of his, we speak of intestate succession; in so far as it is effected by the law in spite of his will, we speak of necessary succession (law of statutory shares). In the civil law the distinction between immovables and movables is confined to the law of things. In the English law the dis-

tinction between real and personal property runs through the law of family (as far as property relations are concerned) and the law of succession and divides each into distinct parts or branches.

Adjective or remedial law, which deals with abnormal conditions, provides for the reestablishment of the normal order, when this is possible; for the indemnification of the persons who have suffered injury; and for the punishment, in person or in purse, of the individuals by whose fault the normal order has been disturbed. Remedial law includes not merely the processes of punishment and redress—administrative procedure, criminal and civil procedure—but also the body of rules which define and classify offenses and provide penalties. It thus includes the law of crimes and the law of torts. (See TORT.) Some writers treat the law of crimes and that of torts as substantive law, placing the former in public, the latter in private law; but these branches of the law do not deal with normal relations, nor does criminal law deal merely with violations of the political order; it provides sanctions which extend over every part of the private law. International law has its remedial as well as its substantive side; it consists of the law of peace and the law of war.

While the distinction between substantive and remedial law is both logical and convenient, it is formal rather than essential. Substantive and remedial law attain the same end in different ways. Social relations are ordered by fixing the limits of permissible action; and these may be fixed as well as by stating what no one may do and by punishing the doer as by stating what one may do and protecting the doer. Historically the former method is the older; rights are felt before they are formulated, and they are gradually defined by the successive repulse of different invasions. Even in modern law there are rights that are recognized in remedial law, but have not yet obtained substantive expression. For example, the individual has a right over his own person which is analogous to (although by no means identical with) ownership of a thing; and this right, although recognized in the prohibition and punishment of homicide, assault, illegal imprisonment, etc., is nowhere defined in substantive law.

Grades of Law. In every state we find legal rules of greater or more general authority and legal rules of inferior or more restricted authority. Where law-making power is delegated to (or has never been wholly taken from) the executive, it is customary to speak of the rules laid down by the executive as orders, regulations, or rules. Municipalities have also a restricted power of legislation; and the acts of their legislative bodies are commonly termed ordinances. Where a limited power of making rules is granted to a private association, we call its rules by-laws. Within their respective fields, executive orders, ordinances, and by-laws, although not commonly termed laws, are as truly laws as the acts of a national or state legislature.

The number of classes or grades of law is increased in federal states by the coexistence of law-making power in the nation and in its component parts. If in considering the different grades of law which exist in the United States we include unwritten law, we obtain the following series:

I. FEDERAL LAW. A. Constitutional. 1. The

Constitution of the United States, and the amendments thereto. 2. The custom of the Constitution, as settled by the acts and forbearances of the Executive and of Congress. 3. The interpretation of the Constitution by the Federal courts. B. *Ordinary*. 1. Acts of Congress. 2. Treaties with foreign states. 3. Executive orders and regulations. 4. Interpretation of acts of Congress, treaties, and executive regulations by the Federal courts.

II. STATE LAW. A. *Constitutional*. 1. The State constitutions and the amendments thereto. 2. The interpretation of the State constitutions by the State courts. B. *Ordinary*. 1. Acts of the State legislatures. 2. Decisions of the Federal courts in matters not governed by Federal law. In cases not governed by Federal law, the Federal courts nominally apply State law; but in the absence of written law they interpret the common law as they see fit: so that, as far as their jurisdiction extends, their decisions have developed a uniform common law for all the States. 3. Decisions of the State courts, construing the acts of the Legislature and interpreting (i.e., developing) the common law. 4. Executive orders and regulations. 5. Municipal ordinances. 6. By-laws of corporations and other associations.

The development of a Federal custom of the Constitution has been necessitated by the difficulty of amending the written Constitution. The absence of any corresponding custom in the States is explained by the ease with which the State constitutions are amended. The interpretation and development of the common law by the Federal courts may in one sense be termed Federal law, but this law is superseded by acts of the State legislatures.

For bibliography, consult the authorities referred to under JURISPRUDENCE; CANON LAW; CIVIL LAW.

LAW. A term of science and philosophy, there used in a metaphorical sense. The primary meaning of the word "law" is written enactment or rule of action laid down by authority. Such law, when enforced by authority, secures a certain uniformity of action. The observed uniformity of action of physical objects thus presents a striking resemblance to the conduct of law-controlled human beings. This resemblance was perhaps the ground for the belief, which appeared in the earliest-known times, that the course of nature is prescribed by enactment of conscious beings. Such a view comes to fullest expression in later Semitic literature. "He gave to the sea his decree, that the waters should not pass his commandment." "Hitherto shalt thou come, but no farther: and here shall thy proud waves be stayed." Against this view protests have been raised for many centuries, but it is only within quite recent times that a less anthropomorphic and more scientific view of the uniformity of natural processes has gained wide currency. According to this view, a "law of nature" is not an enactment expressing the will of some conscious being and obeyed by natural objects, but regularity and uniformity of connection among events; it is thus another way of expressing the fact that all events have causes (see CAUSALITY); and causes of events are not unaccountable entities in some way producing effects by some sort of creative magic, but nothing more nor less than the invariably uniform antecedents of those events. Ever since Hume's trenchant criticism of such words as "force" and

"power," it has come more and more to be seen that nothing is explained by referring effects to the power of causes to produce effects. To attribute the order of nature to the power of some great being who can lay down the law to nature is to explain a fact by a mystery. Science gains nothing, therefore, by ascribing all the uniformities of nature to the determining decree of a supernatural being. The power of such a decree to produce an effect is no more self-explanatory than any causal efficiency of any physical object.

Laws of nature, whether physical, psychical, or psychophysical, are of different orders or grades. Some observed uniformities are particular instances of more extensive uniformities obtaining in many *prima facie* diverse phenomena. For instance, the divergence of the moon's orbit from a straight line was successfully correlated by Sir Isaac Newton with the phenomena of falling bodies nearer the earth's surface. And inasmuch as not only the motion of the moon accords with this law, but also the motions of all the planets and of such comets as have been carefully studied, all these uniformities are correlated in the so-called law of gravitation, which is by hypothesis conceived as obtaining among all physical objects within the universe. In this law of gravitation we have perhaps the best instance of what is called a *scientific* law, i.e., a law which can be stated with accuracy, and to the universality and unconditionality of which all available evidence points with all the assurance of valid logical induction (q.v.).

But not all discovered laws have this logical conclusiveness. Many of them are merely rough generalizations. The exact conditions under which a phenomenon occurs may not yet have been ascertained, and still we may know that under certain general circumstances, not all of which are sufficiently defined, that phenomenon does actually and frequently occur. Take, e.g., the facts of heredity. If there have been in several successive generations many criminals in a certain line of descent, other criminals will probably appear when the present representatives of that line begin to reproduce. But we are not in a position to state the exact conditions under which this further criminality will be sure to appear. Some of the children may escape the taint altogether; some may have tendencies towards criminality, but not too strong to be overcome by proper social influences; while still others are practically incorrigible. Here, then, we have an instance of a more general law of heredity, which may be stated in the proposition that psychical and physical characteristics of children are more or less conditioned by the psychical and physical characteristics of their parents and more remote progenitors. Observe the "more or less" in the statement. There is no such qualification in the law of gravitation. Hence, while the latter is a law in the strictest scientific sense of the term, the law of heredity is a law only in a very loose sense. Such laws are called *empirical* laws. Experience suggests the existence of a causal connection, but science has not yet succeeded in isolating and defining the relation. Empirical laws are the raw material from which scientific laws are elaborated by exact observation, by experiment, and by more guarded generalizations, and especially by correlation with other laws with which they may be related as particular to particular under a common universal.

J. S. Mill's account of empirical laws differs somewhat from that just given, but it is really the starting point of more recent investigations into the differences between scientific and empirical laws. On this account it is worth while to quote it: "Scientific inquirers give the name of 'empirical laws' to those uniformities which observation or experiment has shown to exist, but on which they hesitate to rely in cases varying much from those actually observed, for want of seeing any reason *why* such a law should exist." Consult J. S. Mill, *System of Logic*, book iii (8th ed., New York, 1900), also the other works on inductive logic referred to under LOGIC and INDUCTION.

LAW, AERIAL. See NAVIGATION, AERIAL, LAW OF.

LAW, ANDREW BONAR (1858–). A British statesman, parliamentary leader, and iron manufacturer, born in New Brunswick, Canada, Sept. 16, 1858. He was educated at the Gilbert Field School of Hamilton, Ontario, and at the High School of Glasgow, Scotland, whither his parents had removed in 1870. Although his immediate family was poor, he had wealthy and influential relatives—at 16 he was given employment by his uncle, head of the iron-works of William Kidston and Sons. He learned the business thoroughly and rose to positions of responsibility in and outside the firm. As chairman of the Glasgow Iron Trade Association, he showed marked ability, and he served also as justice of the peace for Dunbartonbury. In 1888 he became a partner in the firm of William Jacks & Co., one of the largest iron manufacturing and exporting houses in Glasgow. His business experience and financial investigations gave him an intimate knowledge both of British and of international fiscal conditions and were of much use to him in his later political career. Having amassed a considerable private fortune, he retired from business and entered politics. His belief in tariff reform in the direction of protection for domestic interests determined his alignment with the Unionist party. He was elected a member of the House of Commons in 1900 from Glasgow, but in the general election of January, 1906, was defeated. In May of that year, however, he was returned from Dulwich. He was unsuccessful in contesting for a seat at Manchester in 1910, but was elected from Bootle, Lancashire, the next year. From the first, Law attracted considerable attention as a practical and well-informed member, and his maiden speech, largely respecting fiscal matters, won the praise of Sir William Harcourt. In 1902 he was given office as Parliamentary Secretary of the Board of Trade and was continued in this capacity throughout the Balfour ministry until 1906. His efficiency as a financial administrator and his ability as a public speaker brought him frequently before the House and the country for favorable attention. His attacks upon the land-tax provisions of the revolutionary Lloyd-George budget of 1909 were regarded as the ablest exposition of the ideas and attitude of the Unionist party. In 1911 Arthur J. Balfour decided to retire from the leadership of the Opposition. In filling the place made vacant through the resignation of this great parliamentarian and philosopher,

the Unionists experienced considerable difficulty. One faction favored J. Austen Chamberlain and another Walter H. Long. It was feared, however, that the selection of either of these popular but factional leaders would bring dissension and friction within the party. As a compromise, Law was elected. Without previous experience as a member of the cabinet and with little or no personal following in the country, Law's election occasioned much surprise. Although a vigorous and pleasing speaker, his oratory was of an unimaginative and sober character, not likely to evoke enthusiasm in the people. In some of his important *parliamentary* utterances, such as that at Albert Hall in 1912, he was indiscreet and was afterward forced to qualify and even retract some of his remarks. But in many of the parliamentary struggles, such as those concerning Irish Home Rule and the Parliament Bill, he had the assistance of Balfour, and although not conspicuously successful as a leader, he was by no means a failure; many regarded him as an able and sound statesman. Glasgow University gave him the degree of LL.D.

LAW, EDMUND (1703–87). An English prelate and metaphysician, born at Cartmel, Lancashire, and educated at St. John's, Cambridge. He was for nine years (1737–46) rector of Grey-stoke, Cumberland, became Archdeacon of Carlisle in 1743 and master of Peterhouse in 1754, and in 1768 was elected Bishop of Carlisle. Among his works, which are marked by painstaking investigation and freedom from dogma, are: *An Enquiry into the Ideas of Space and Time* (1734) and *Considerations on the Theory of Religion* (1745); and later with a biographical sketch by Paley).

LAW, FEUDAL. See FEUDALISM.

LAW, J. A. B. See LAURISTON, J. A. B. L.

LAW, JOHN (1671–1729). A celebrated financier and speculator, born at Edinburgh, April 21, 1671. His father was a goldsmith and banker and proprietor of the large estate of Lauriston, near Edinburgh. Law early showed a most remarkable talent for mathematics, and after the death of his father he removed to London, where he was soon prominent both in financial and social circles; but his life was a dissipated one, and in 1695 he was compelled to flee from England in consequence of a duel in which he killed his adversary. After visiting France and Italy he went to Amsterdam and spent his time in studying the credit operations of the bank, where he was employed for a short time. About the year 1700 he returned to Edinburgh, a zealous advocate of a paper currency; but his proposals to the Scottish Parliament on this subject met with an unfavorable reception. He visited different parts of the Continent, where he won large sums by gambling, but sought in vain to win the favor of governments to his banking schemes, which were outlined in a pamphlet advocating a state bank with paper notes. At last in 1715 he settled in Paris, and in company with his brother William set up in 1716 a private bank, which was chartered by the government, and which was soon successful and prosperous to such an extraordinary degree that in 1718 the Duke of Orléans, the Regent, was persuaded to adopt Law's plan of a national

bank. The new institution issued prodigious quantities of bank notes, which at first enjoyed perfect credit, while the ordinary national bonds remained, as they had long been, at a price far below their nominal value. In 1717 Law originated his famous Mississippi Scheme (q.v.) for the purpose of raising money to meet the exigencies of the State. The Compagnie d'Occident was established, with liberty to exploit the region about the Mississippi. It soon absorbed the French East India Company and other trading companies, being transformed into the Compagnie des Indes. The public were invited to invest in the shares of this company, and an extraordinary speculative mania resulted, which drove up the value of the shares to an almost fabulous height. For a time it seemed as if the Mississippi Scheme would more than fulfill its promises, and the company, which undertook the payment of the debts of the government, was charged with the receivership of the taxes. In the meanwhile the country was flooded with paper money, and in 1720 a general financial collapse ensued. Coined money rose in price enormously, financial confusion was general, and Law, who had been made Councilor of State and Comptroller of Finances just before the crash came, thought it prudent to quit France. He proceeded first to Brussels and then to England, where he remained for several years, but finally settled in Venice, where he managed to maintain himself by gambling, and died there, March 21, 1729. Law appears to have remained a firm believer in his theories regarding public credit and currency, which were influenced by the writings of William Patterson (q.v.). Their main fallacy was that he considered money not the effect but the cause of wealth and recommended accordingly an increase of money through paper currency. As a strong believer in the omnipotence of government, he advocated the establishment of one big monopoly combining foreign trade and internal finance under the management of the state instead of through individual enterprise. He developed this system especially in a pamphlet, *Money and Trade Considered*. A complete edition of his works, translated into French, was published at Paris in 1790 and reprinted in 1843. They have since been inserted in Guillauman's collection of the writings of the chief economists and financiers of the eighteenth century.

Wiston-Glynn, *The Financier Law: His Scheme and Times* (London, 1907).

LAW, JOHN (1796-1873). An American jurist, born in New London, Conn. He was de-

scended from a line of lawyers including Jonathan Law (1674-1750), Chief Justice of the Connecticut Supreme Court and Governor. He graduated at Yale in 1814, was admitted to practice in 1817, and soon afterward emigrated to Indiana and made his home at Vincennes. He was successively prosecuting attorney, member of the State Legislature (1823), again district attorney, a judge for eight terms, and in 1838-42 was land-office receiver. In 1851 he moved to Evansville and was one of the founders of the town of Lamasco. He was judge of the Court of Land Claims in 1855-57 and served in the House of Representatives from 1861 to 1865. His address on the *Colonial History of Vincennes* was published in 1839 and in 1858. He was a president of the Indiana State Historical Society.

LAW, PSYCHOLOGY OF. There are two views regarding the psychological origin of law. The one is that law developed from a religious sentiment, viz., from the desire or obligation which was felt by society to fulfill the wishes or commands of the dead. The second view is that, in addition to this religious sentiment, the already existing customs of the social group must be taken into account. The two views are not necessarily antagonistic; they rather regard two different levels or stages in the development of law. The second view, which regards the lower stage, may be stated in brief as follows: Customs are social habits, which take shape before society becomes aware of them. Realization of a custom comes about either through its unwitting infringement or by comparison with the customs of other social groups. In such an event the origin of the custom becomes of moment; and primitive man, naturally enough, refers it to the practice of his ancestors. Here, then, enters the religious motive: the custom must be conformed with out of respect to (or in fear of) the ancestral ghosts. Now, law differs from custom in that it enforces, by definite penalties inflicted for nonobservance, the duty which it enjoins. When, therefore, the breach of custom incurs the wrath of the ancestral ghosts, we have the primary form of penalty, and the custom becomes a law. It is only at a later stage that the procedure itself, as well as the penalty, is derived immediately from the religious motive.

The arbiter, in matters of "custom law," is at first the head of the family and later the chief of the group. But when modification of old or establishment of new laws is demanded, when novel and more complex conditions of social development appear, the authority of the chief is not sufficient, and recourse is had to the ancestor's spirit or, as later happens, to the ghost of some revered chief or, still later, to the nation's God. Thus Moses derived from divine behest not only the Ten Commandments, but also the entire Mosaic law; and in the case of the Greeks, after the Doric migration, "no new political institutions, no fresh culture, no additional games were established without the sanction of the Pythian oracle." We find so far no distinction between political and religious law; in the Mosaic law sins against God and sanitary defaults are listed together; and in the

Code of Manu there is a like mixture of sacred and secular regulations, of moral dictates and rules for carrying on ordinary affairs. Furthermore, the judge of the law was himself a priest or was directly ordained by his God or finally was a direct descendant of God. At this stage it is evident that law rests principally, if not solely, upon the religious motive, and there is ample justification for the view that, historically regarded, law here has its first beginning. Psychologically, however, the inquiry must be pushed to the lower level; for law can come into being only in consequence of a demand which is inherent in the nature of society, a "need" which we find expressed in custom and which in its turn is explained in terms of social instincts.

The subsequent history of law, from the psychological point of view, is concerned with the cleavage between religious and political laws. This comes about (1) through a gradual substitution, where political matters are concerned, of allegiance to the state for the primitive allegiance to the ancestral spirit, and (2) through the gradual development of the idea that the infringement of law is an injury to the state, and, as such, is punishable by the state. In this transformation, however, the religious motive is still operative, as may be seen both in the universal appeals of modern judges to precedent and also in the court paraphernalia, in the formalities of observance and the solemn oaths. All of these things tend to enhance the dignity of the judge and to inspire reverence for the law.

LAW, WILLIAM (1686-1761). An English devotional author. He was born at King's Cliffe, near Stamford, Northamptonshire, and graduated M.A. at Emmanuel College, Cambridge, in 1712. A strong Tory sympathizer, he refused to take the oath of allegiance on the accession of George I. His writings are deeply tinged with mysticism; in later life he was a follower of Jakob Böhme. His *Serious Call to a Devout and Holy Life* (1729) first awakened the religious sensibilities of Dr. Johnson, who speaks of it in high terms. The Wesleys also derived much advantage from it and became intimate with Law, but later rejected his teachings. His other writings include: *Remarks upon Mandeville's Fables of the Bees* (published 1724; republished with an introduction by Maurice, 1844), *The Absolute Unlawfulness of the Stage Entertainment Fully Demonstrated* (1726); letters to the Bishop of Bangor (1717-19); and some very able attacks on the rationalism of his day. His collected works were published in London in nine volumes in 1762. His *Serious Call* has been many times reprinted. A selection from his works, by Palmer, *Liberal and Mystical Writings*, was published in New York, (1905). Consult: J. H. Overton, *Law; Non-*

juror and Mystic (London, 1881); Alexander Whyte, *Characters and Characteristics of William Law* (New York, 1898); W. R. Inge, *Studies of English Mystics* (ib., 1906).

LAWES, SIR JOHN BENNETT (1814-1900). A celebrated English agriculturist, born at Rothamsted, Hertfordshire. He was educated at Eton, Oxford, and London, entered upon the management of the paternal estate of Rothamsted in 1834, and three years later commenced experiments with plants grown in pots of soil. He early discovered a process for transforming bone into superphosphate by the use of sulphuric acid, took out a patent in 1842, and built up an extensive business which he managed for about 30 years. In 1867 he engaged in the manufacture of tartaric and citric acids and continued in this business until his death. The experimental inquiries at Rothamsted were enlarged in 1843 by the employment of Dr. (afterward Sir) J. H. Gilbert to superintend the laboratory work. For more than 50 years Lawes and Gilbert conducted elaborate agricultural investigations. The field experiments were enlarged and systematized until they occupied nearly 40 acres in 1856. Experiments with animals were begun in 1847, and a variety of problems in animal nutrition have since been studied. In 1889 Sir John transferred the laboratories and experimental fields of Rothamsted to a board of trustees with an endowment of about £100,000. He made provision for a biennial course of lectures in the United States on the Rothamsted work. He was created a baronet in 1882, in recognition of his great services to agriculture. Consult: *Royal Society of London, Philosophical Transactions* (London, 1859, 1880-89, 1900); *British Association for the Advancement of Science, Reports* (ib., passim); *Bulletins 6 and 22 of Office of Experiment Stations, United States Department of Agriculture, A. D. Hall, The Book of the Rothamsted Experiments* (ib., 1905).

LAWES, WILLIAM GEORGE (1839-). An English Congregational missionary. He was born at Aldermaston, Berkshire, and studied at Mortimer and Bedford. Upon his ordination to the Congregational ministry in 1860 he was sent to Niue or Savage Island, where he remained for 10 years. Going to New Guinea in 1874, he and his Scottish colleague, James Chalmers, aided the establishment of a British protectorate in 1884 and annexation in 1888; and at Vatorata he founded in 1896 a training school for native teachers. He retired in 1906. He translated the New Testament into Motu and the language of Niue and wrote a *Grammar of Motu* (1885; 3d ed., 1890).

LAWES-WITTEWRONGE, laz'-wit'rong, SIR CHARLES (1843-1911). An English sculptor. He was born at Teignmouth and was educated at Trinity College, Cambridge. His work as a sculptor is strong and bold in treatment and full of vigorous action, but often lacking in repose and refinement. His best-known pieces are the colossal bronze group "They Bound Me On" (1888), and the high relief "United States of America" (1890), consisting of 10 female figures. In later work he treated sculpture as secondary to architecture rather than as a separate art. He was president of the Incorporated Society of British Sculptors and was also strongly interested in agricultural science and athletics.

LAWLESS, HON. EMILY (1845-1914). An

Irish novelist, daughter of Edward, third Baron Cloncurry. At her best as a novelist, she essayed also poetry, history, and biography. In 1905 Dublin University gave her an honorary Litt.D. She is the author of, notably, *Hurriah* (1886), a novel; *Ireland* (1887), a brief history in the "Story of the Nations Series"; *Plain Frances Mowbray* (1889); *Grania* (1892), her strongest novel; *Maelcho* (1894), an historical romance, *With Essex in Ireland* (1890); *A Garden Diary* (1901); *With the Wild Geese* (1902), poems; *Marsa Edgeworth* (1904), an inadequate critical biography; and *The Book of Gilly* (1906).

LAWLEY, GEORGE (1823-1915). An American yacht builder, born in London, England. In 1851 he emigrated to the United States, and after 1854 he was engaged in shipbuilding, first in Boston, then (1866-74) at Scituate, Mass., and finally again in Boston, with his son George F. Lawley as partner. The firm of Lawley & Son built the *Puritan*, which defended the *America's* cup in 1885, and the *Mayflower*, which defended it in the following year. Lawley retired from active business when his firm was incorporated with a capital of \$100,000 in 1890, and his son became the active head.

LAW LIBRARIES IN THE UNITED STATES. See LEGAL EDUCATION

LAW MERCHANT. Originally the body of rules governing the various communities of merchants throughout Europe, and administered by special local tribunals, known as piepowder courts (q.v.), staple courts, and merchants' courts (q.v.). The procedure of the law merchant as well as its substantive rules differed widely from those of the early common law. Its courts were expeditious, seeking not only to do justice, but to do it speedily. Judges for these tribunals were selected because of their knowledge of the law merchant, and were bound to administer that law and not the common law of the land, nor the peculiar local usages of the cities, towns, or boroughs where they sat. During the seventeenth century the courts which specially administered this body of law died out in England, their jurisdiction being gradually assumed by the common law and equity tribunals of the realm. From this time to the accession of Lord Mansfield as Chief Justice, the term "law merchant" was employed in quite an indefinite sense. The common-law judges and juries were not versed in the legal usages of merchants. When mercantile controversies came before them, it was often necessary to call merchant witnesses to prove what the law merchant applicable to the particular case was, although, if the mercantile custom involved was notorious, the ordinary courts would take judicial notice of it.

The third period in the history of the law merchant in England embraces the latter half of the eighteenth century and most of the nineteenth. Lord Mansfield conceived that the usages of merchants in all countries rested upon the same general principles, and that the law merchant was a branch of the *jus gentium*, or law common to all nations. As Chief Justice, he devoted his great energies to the development of a body of legal rules which should be based not on the common-law doctrines of England, but upon principles which commercial convenience, public policy, and the customs and usages of merchants had contributed to establish, with slight differences, over all Europe. In

the United States his work was carried forward by Chancellor Kent, Justice Story, and others. As a result of this movement, the law merchant and the common law are no longer distinct and separate bodies of legal rules. To a large extent they have become amalgamated and are administered by all legal tribunals as a single system. At the present time, therefore, "law merchant" does not designate a separate and distinct body of law, as it did formerly, but is applied to various branches of English law, in which the old usages of merchants still survive to a considerable extent, or which have sprung out of modern business needs and customs, such as agency, bailments, insurance, bills and notes, partnership. Consult the authorities cited under those titles, also J. W. Smith, *Compendium of Mercantile Law*, Macdonnell's Introduction (11th ed., 2 vols, London, 1905); T. E. Scrutton, *The Elements of Mercantile Law* (London, 1891); "The Early History of the Law Merchant in England," in *Law Quarterly Review*, vol. xvii (London, 1901); F. M. Burdick, *The Essentials of Business Law* (New York, 1902); "What is the Law Merchant?" in *Columbia Law Review*, vol. ii (ib., 1902); *Select Cases Concerning the Law Merchant*, A. D. 1270-1638; edited for the Selden Society by Charles Grass (London, 1908).

LAWN (older forms *lawnd*, *laund*, OF. *lande*, *launde*, Fr. *lande*, heath, from Ir. *land*, OWelsh, Bret. *lann*, Corn. *lan*, open space; ultimately connected with Goth., AS., Eng. *land*, OHG. *lant*, Ger. *Land*, land). A smooth, even, well-kept turf or greensward, intended solely for ornament and pleasure. The hot and dry summers which frequently prevail in the United States are injurious to grass; but, as the lawn is usually limited in extent, this obstacle is overcome by controlling the moisture conditions. Good velvety turf can be maintained in moderately dry climates, even in times of intense and prolonged heat and drought by daily supplying the necessary moisture. In no instance is the condition of the soil a more important factor than in lawn making. The best soil for this purpose is a sandy loam of fine texture with a clay subsoil, the most favorable combination for either wet seasons or times of drought. A clay soil bakes too readily, and an open sandy or gravelly soil is not sufficiently resistant of drought. Before the soil is prepared to receive the grass seed, it is drained, if it has inadequate natural drainage, and then graded to give it the desired contour. The ordinary dooryard lawn is usually level, but the extensive lawns of parks combine in their contour the level, the convex, and the concave, gracefully merging into each other.

The preparation for the grass seed consists in working the soil with the plow and subsoiler or the spade to a depth of at least one foot. All stones and rubbish are removed to obtain a clean, fine, and well-tilled seed bed. A rich soil is essential, and the land for a lawn should be enriched by heavy applications of well-rotted barnyard manure or when the manure cannot be obtained by a heavy dressing of commercial fertilizers. A complete commercial fertilizer, i.e., a fertilizer containing nitrogen, phosphoric acid, and potash, is used, and liberal quantities of lime and bone meal are worked into the soil in addition. The selection of grasses is determined by the climate of the locality, and the color, texture, and sod-forming habit of the dif-

ferent species. The most common grasses combining the qualities of a lawn grass to a greater or less extent are Kentucky blue grass, fescue grass, bent grass, St. Augustine grass, and Bermuda grass. The finer varieties of fescue and bent grasses form an especially soft and elastic turf, qualities highly esteemed in a lawn. St. Augustine grass and Bermuda grass are well adapted to warm climates and are extensively used as lawn grasses in the southern United States. In order to obtain evenness in the texture of the turf and the color of the lawn, it is customary to sow only one kind of grass. Mixtures of different grasses, however, are also frequently used. A light, scattered stand of white clover is often considered desirable. The grass seed is sown thickly, from 50 to 75 pounds being used per acre. Care should be taken not to introduce weed seeds in the manure or with the grass seed. The time of seeding depends upon the climate and the prevailing weather. The seed should be sown when the conditions for its growth are the most favorable. Moisture is an absolute requirement, and for this reason sowing shortly before an expected rain is the common practice. Windy weather prevents the even scattering of the seed. In general, sowing is done during the moist months of spring, but where conditions permit in the early fall. After the soil has been made perfectly smooth and fine, the seed is scattered evenly over the surface and thinly covered with a fine-toothed iron rake, followed by an iron roller. To avoid covering the seed too deeply, the land is sometimes rolled without the previous use of the rake.

Small grassplugs are often covered with transplanted turf instead of beginning with the seed. When the grass has grown several inches high, mowing with the lawn mower is begun and repeated at short intervals. Frequent mowing and rolling improves the turf. During dry summers, when there is danger of exposing the roots to the drying action of the hot sun, too frequent mowing is injurious. The lawn should be rolled at least once each spring when the weather is moist, for the purpose of compacting the turf. To keep up the fertility of permanent lawns, land plaster, nitrate of soda, and hardwood ashes are applied as top dressings in the spring, or a dressing of fine compost is applied in the fall. Consult: Leonard Barron, *Lawns and How to Make Them* (New York, 1906); L. C. Corbett, "The Lawn," in *Farmers' Bulletin*, No. 248 (Washington, 1906); Schreiner and Skinner, "Lawn Soils," in *Farmers' Bulletin*, No. 494 (ib., 1912); L. J. Doogue, *Making a Lawn* (New York, 1912); C. P. Kelligan, "Starting a Lawn," in *Michigan Experiment Station, Circular*, No. 20 (Lansing, 1913).

LAWN TENNIS. A game played with racket and ball on a court crossed at the centre by a net. It is the modern development of the ancient game of tennis, (q.v.), the same methods being used in scoring the games and set. While primarily a summer game, played on closely cut grass lawns or on hard earth, marked with lines of whitewash, it also is played in winter, on the floors of armories and gymnasiums.

The outside dimensions of the court for the singles game, one player against another, are 78 feet in length and 27 feet in width. For the doubles game, in which four persons play, the dimensions are 78 feet in length and 36 feet in width, the extra 9 feet in width being taken up by side courts, each of which is $4\frac{1}{2}$ feet wide.

The modern game of lawn tennis was first played in England about 1874 and introduced into America a year later by Dr. James Dwight and the Sears brothers, R. D. and F. R., at Nahant, Mass.

To Major Wingfield, of England, credit must be given for inventing the fundamental principles of the game as played at present. He took out a patent, calling the game Sphairistike, and the following year, under the name of lawn tennis, it was officially adopted by the Marylebone Cricket Club. In 1877 the first All-England lawn tennis championship was held at Wimbledon, Spencer W. Gore winning the title. Every year since then the championships of England have been held at Wimbledon.

William and Ernest Renshaw developed the game greatly, introducing the volley and the smash stroke. They won the doubles championship eight times, from 1880 to 1889, and William Renshaw captured the singles title no less than seven times. H. F. Lawford was another successful player of that period, specializing in the nonvolleying game.

It was not until the year 1885 that the permanent features of lawn tennis were adopted and the present measurements and marking of the court and the height of the net settled upon. These are as follows. The net is attached to two posts standing 3 feet outside of the court on either side. At the posts the net is 3 feet, 6 inches in height and in the centre is 3 feet. Midway between the side lines of the court and parallel with them is drawn the half-court line, dividing the space on each side of the net into two equal parts, called the right and left hand courts. On each side of the net and running parallel to it are drawn the service lines at a distance of 21 feet from it. The double, or side, courts are created by simply increasing the width of the entire court by $4\frac{1}{2}$ feet on each side, with the outer longitudinal lines running parallel to the half-court line.

The players decide the choice of courts and the right to serve first by tossing the racket in the air. They stand on opposite sides of the net, the one who first strikes the ball being called the server and the person who receives the ball being termed the striker-out. The service alternates at the end of each game, and the ball is delivered from the right to the left-hand court, alternately. The server must stand behind the base line (the end of the court). The ball must drop between the service line, half-court line, and side line of the court diagonally opposite to that from which it is served.

Each stroke counts 15 for the player winning it, except that the third winning stroke makes the score read 40 instead of 45. If both players win three strokes, the score is termed "deuce" instead of forty-all. The winner of the next stroke scores "advantage," and if he wins the succeeding stroke also he captures that game, but if he fails to win the two strokes in succession, the score goes back to deuce. If one player scores four points and the opponent does not score at all, then the first player wins a "love" game.

The player who first wins six games takes the set, unless he and his opponent should have each won five games, in which case one or the other must win two consecutive games to win the set, called a "deuce set." The players must change sides after the first, third, and every alternate game. Championship matches are usually de-

terminated by the winning of three sets out of five.

Interest in the game grew by leaps and bounds in the United States, soon after Dr. Dwight had introduced it, and in 1881 a tournament was held in New York City with 33 clubs represented. The United States National Lawn Tennis Association also was formed that year, and the English ball, measuring $2\frac{1}{2}$ inches in diameter, adopted. In the same year the first national lawn-tennis championship tournament was held on the courts of the Newport Casino, at Newport, R. I. R. D. Sears won the initial championship, his strong volleying game from close to the net completely upsetting his opponents. He successfully defended his laurels for the next six consecutive years, sweeping all before him. At the same time Sears and Dr. Dwight won the doubles championship, holding this title from 1882 to 1887 inclusive.

Each succeeding year saw steady improvement in the strength of the game played both in America and abroad, new strokes being developed and greater speed injected into the game.

The men who studied court tactics most carefully, who figured out where their opponents were going to place their returns and how best to draw the contending player out of position, were the most successful. Among the most notable players of recent years were Malcolm D. Whitman, W. A. Larned, Karl H. Behr, Dwight F. Davis, Maurice E. McLoughlin, and R. Norris Williams, 2d, who won the national title from McLoughlin in August, 1914. Beals Wright, who held the championship in 1905, was regarded by the English experts as one of the finest players ever produced in the United States.

In 1900 Dwight F. Davis presented for competition an international challenge cup, to be competed for in the country whose players held the international championship. In the same year the British Isles sent a team to the United States, consisting of A. W. Gore, H. Roper Barrett, and E. D. Black, which was defeated by the American team, comprising Whitman, Larned, Ward, and Davis. In 1902 England again sent a team overseas in quest of the cup, R. F. and H. L. Doherty and Dr. Joshua Pim being the challengers; but they met with no better success than their predecessors, being defeated by the same team of American players.

Once more, in 1903, the two Doherty brothers, the most famous players in England, challenged for the cup, and this time were successful in their quest, defeating Larned and R. D. and G. L. Wrenn, Jr., at Longwood, Mass. For the first time the trophy offered by Davis left the land of its birth and was borne to England by the victorious Dohertys. England retained possession of the cup until 1907, defeating France, Belgium, Austria, America, and Australia in 1904, 1905, and 1906.

Australasia put forward a formidable team in 1907 and captured the trophy, retaining it the following year through the brilliant playing of Norman E. Brookes and Anthony F. Wilding, who defeated the American team which had qualified as the challenging combination by vanquishing the representatives of the British Isles in America. In 1909 only the United States and Australasia competed, McLoughlin and M. H. Long, the American pair, being defeated in Australia in both singles and doubles.

In 1910 there was no challenge from any of the nations, but the following year America,

after defeating the British Isles in the final round, lost to Australasia in the challenge round, Larned, McLoughlin, and Beals Wright composing the American team. In 1912 the United States failed to send a team to the antipodes, and the Davis Cup went to England, Brookes, Heath, and Dunlop, for Australasia, being unable to withstand the assaults of Park, Beamish, and Dixon.

The year 1913 saw the Davis Cup return once more to the United States when McLoughlin, Williams, and H. H. Hackett, after going successfully through the preliminary international rounds, faced Parke, Dixon, and H. Roper-Barrett, of the British Isles, at Wimbledon, and defeated them by three matches to two.

The cup was not destined to remain long in the United States, however, for in August, 1914, on the courts of the West Side Tennis Club, at Forest Hills, L. I., Norman E. Brookes and Anthony F. Wilding, the Australasians, who had successfully come through to the challenge round, defeated the American team of McLoughlin, Williams, and T. C. Bundy, by three matches to two. The Davis Cup was again lost to America.

Although the United States could not retain the cup, Maurice McLoughlin gained the reputation of being the world's greatest player by defeating the two great Australasians in the singles, whereas Williams lost to both the challengers, who also defeated McLoughlin and Bundy in the doubles.

LAW OF THE TWELVE TABLES. See TWELVE TABLES, LAW OF THE.

LAWRANCE, JOHN (1750-1810). An American lawyer and legislator, born in Cornwall, England. At the age of 17 he emigrated to America and settled in New York City, where he studied law, and where in 1772 he was admitted to the bar. His success in his profession was immediate. He threw himself into the Revolutionary movement with ardor and received a commission in the first regiment of New York militia, organized by his father-in-law, Alexander McDougall. In October, 1777, he became an aid on the staff of Washington, and in 1780 as Judge-Advocate-General presided at the trial of Major André (q.v.). After the war he resumed the practice of law in New York and in 1785-87 was in the Continental Congress, where he strongly advocated the proposed Constitution. This led to his being superseded in 1788 by an Anti-Federalist. In 1789 he was elected to the New York State Senate and in the same year was elected a member of the First Congress under the new Constitution. He was also a member of the Second

Congress (1791-93) and in 1794 was appointed by President Washington United States Judge for the District of New York. In 1796 he resigned from the bench to take his seat in the United States Senate, to which he had been elected to succeed Rufus King. He remained in the Senate until 1800 and was President pro tempore of that body in 1798-99. He was a staunch supporter of Hamilton and was particularly opposed to any compromise between the Federalists, of which party he remained up to his death one of the principal leaders, and the Burrists.

LAWRENCE. A city and the county seat of Douglas Co., Kans., 41 miles west by south of Kansas City, on both sides of the Kansas River, and on the Atchison, Topeka, and Santa Fe and the Union Pacific railroads (Map: Kansas, G 5). The city is well laid out, with wide, well-paved streets, and has many attractive buildings, including a fine courthouse, Federal building, Carnegie library, Y. M. C. A., and splendid school buildings. It is the seat of the State University (see KANSAS, UNIVERSITY OF), founded in 1866 on Mount Oread, and of the Haskell Institute, one of the United States government's three great industrial schools for Indians, which occupies a site of 600 acres. Lawrence is situated in a fertile agricultural and stock-raising region, but is important chiefly as a commercial centre, and its manufacturing interests, which are considerable, are promoted by excellent water power. The industrial establishments include flouring and paper mills, manufactures of collars, shirts, sashes, doors, pianos, vitrified brick and tile, a foundry and machine shop, and a creamery. The city adopted the commission form of government in 1914. Lawrence (named in honor of Amos A. Lawrence) was the first of the "free-State" towns founded by the Emigrant Aid Society in 1854, immediately after the passage of the Kansas-Nebraska Bill (q.v.), and was for several years the headquarters of the Antislavery party in Kansas. In November and December, 1855, during the so-called Wakarusa War, it was besieged for a short time by a force of proslavery men; and on May 21, 1856, it was occupied and partially destroyed by another proslavery force. On Aug. 21, 1863, a body of Confederate raiders under Quantrell almost completely destroyed it and killed 123 of its citizens. Pop., 1900, 10,862; 1910, 12,374; 1914 (U. S. est.), 13,018. See KANSAS.

LAWRENCE. An important manufacturing city in Massachusetts, county seat of Essex County, 24 miles north by west of Boston, situated on both sides of the Merrimac River, and on several branches of the Boston and Maine Railroad (Map: Massachusetts, E 2). It includes the villages of Arlington District, Carltonville, and Halleville. The Merrimac at this point has a descent of 26 feet in half a mile, affording water power estimated at 11,900 horse power, controlled by a dam of solid granite, 900 feet long and 30 feet high, thrown across the rapids, and by canals on each side of the river, the first of which was opened in 1846. An 18-foot channel to the sea is in the process of construction (1915).

In the manufacture of woollen cloths Lawrence ranks first among the cities of the United States, and the Pacific Mills Print Works are among the largest of their kind in the world. The value of this product manufactured in 1909

was \$58,536,000. Other manufactures include paper, paper-mill machinery, foundry products, carriages, cotton goods, sashes, doors, and blinds, engines, boilers; belting, shoes, and wheels. Features of interest in the city are the large public library, Essex County Training School, Children's Home, Cottage and Lawrence hospitals, the courthouse, and a park system comprising 156 acres. There are also several bridges across the river, numerous private charitable institutions, and a number of county buildings. The government is vested in a commission of five. In 1914 Lawrence spent about \$1,300,000 for maintenance and operation, the principal items of expenditure being \$380,000 for schools, \$118,000 for charitable institutions, \$120,000 for the police department, \$109,000 for the fire department, and \$90,000 for public health and sanitation. The water works are owned by the municipality. Pop., 1850, 8282; 1870, 28,921; 1900, 62,559; 1910, 85,892, of which number 41,319 were of foreign birth; 1914 (U. S. est.), 95,834.

Lawrence was created by Act of the Legislature, March 20, 1845, out of parts of Methuen and Andover and was incorporated as a city May 10, 1853. It was the scene of severe labor disturbances in 1912. Consult Wadsworth, *History of Lawrence, Mass.* (Lawrence, 1880).

LAWRENCE, ABBOTT (1792-1855). An American merchant, legislator, and diplomat. He was born in Groton, Mass., was educated in a district school, and at the Groton Academy (now Lawrence Academy), removed to Boston in 1808, and there served an apprenticeship in the warehouse of his elder brother, Amos, with whom in 1814 he founded the famous firm of A. & A. Lawrence. Lawrence also took an active interest in several railroad enterprises, was president of the Essex Company, which in 1845 founded Lawrence, Mass. (named in his honor), and towards the latter part of his life was largely engaged in the China trade. From 1835 to 1837, and again from 1839 to 1840, when ill health forced him to resign, he was a member of Congress; and in 1842 he was one of the commissioners of Massachusetts who coöperated with the commissioners of Maine and with Daniel Webster, then Secretary of State, in negotiating the Webster-Ashburton Treaty (q.v.) concerning the northeast boundary of the United States, with England's representative, Lord Ashburton. He declined the portfolios of the Navy and of the Interior in President Taylor's cabinet. He was United States Minister to England from 1849 to 1852, in which capacity he rendered important services to the country and became widely popular with the English people, though in 1852, wishing to devote his attention wholly to his business interests, he was recalled at his own request. He was a firm believer in protection, representing Massachusetts at the Harrisburg Convention in 1827. He made many donations to charitable institutions and in 1847 contributed \$50,000 for the establishment of a scientific school at Harvard, which was named in his honor, and to which by will he subsequently contributed another \$50,000. He left a like sum for the erection of model lodging houses for the poor, the surplus income from which was to be forever applied to charitable purposes. Consult H. A. Hill, *Memoir of Abbott Lawrence* (2d ed., Boston, 1884).

LAWRENCE, Amos (1766-1852). An Amer-

ican merchant and manufacturer, born at Groton, Mass., and educated at the Groton Academy founded there by his father. After working as a clerk for several years, he embarked (1807) in the dry-goods business on his own account in Boston. In 1814 he formed a partnership with his brother, Abbott Lawrence (q.v.), and the firm became the foremost wholesale mercantile establishment in the country. He is best known for his connection with the cotton manufacturing industry in New England, the cities of Lawrence and Lowell owing their preëminence in this branch of industry largely to his efforts. Ill health compelled him to retire from active participation in business in 1831, and the later years of his life were spent largely in furthering various philanthropic enterprises. He contributed largely to the building of the Bunker Hill Monument and gave large sums to Williams College and to the academy at Groton, Mass., which in 1843 was renamed Lawrence Academy in honor of the family.

LAWRENCE, AMOS ADAMS (1814-86). An American philanthropist, son of Amos Lawrence. Born in Boston, he graduated from Harvard University in 1835, and then became connected with banking and mercantile undertakings, particularly textile. . . . He supported the antislavery element in the colonization of Kansas and assisted in recruiting a cavalry regiment for the Civil War. In 1849 he gave \$10,000 to found the Lawrence Institute of Wisconsin (now Lawrence College), at Appleton, Wis., and subsequently gave more than \$30,000 to support the institution. His benevolences include also Lawrence Hall for the Episcopal Theological Seminary at Cambridge, Mass., built in 1873-80 at a cost of \$75,000. The city of Lawrence, Kans., was named for him.

LAWRENCE, FREDERICK WILLIAM PETHICK (1871-). An English reformer. He was educated at Eton and at Trinity College, Cambridge, of which he became a fellow in 1897. He traveled widely; was prominent in university settlement work; was Liberal Unionist candidate for Parliament from North Lambeth in 1900, but withdrew because he opposed the Boer War; visited South Africa and worked for the South African Women's and Children's Distress Fund. He edited the *Echo*, a London evening paper, from 1902 to its failure in 1905, when it was said that he settled its debts. In 1901 he had married Emmeline Pethick, with her he became a leader and financial backer of the militant suffragette movement and was joint editor of its organ, *Votes for Women*. Mr. and Mrs. Pethick Lawrence and Mrs. Pankhurst were arrested in March, 1912, charged with conspiring to break windows; in May they were sentenced to nine months' imprisonment, but were released before the end of June. Pethick Lawrence refused to pay costs and was made bankrupt until the sum was collected in 1913 from his estate. Late in 1912 he and his wife withdrew their aid from Mrs. Pankhurst's militant Social and Political Union. Mrs. Pethick Lawrence visited New York in 1914 and spoke on the European War.

LAWRENCE, GEORGE ALFRED (1827-76). An English novelist, born in Braxted, Essex. He was educated at Oxford and studied for the bar, but afterward gave all his time to literature. His most famous book, *Guy Livingstone, or Thorough*, was published in 1857. At the opening of the Civil War he went to the United

States to enlist in the Confederate army, but was arrested, and released subsequently on condition that he would return to England. His *Border and Bastile* (1863) chronicles this incident. His other works include: *Sword and Gown* (1859); *Barren Honour* (1862); *Maurice Dering, or the Quadrilateral* (1864); *Breaking a Butterfly: Blanche Ellerslie's Endang* (1869); *Silverland* (1873); *Hagarene* (1874).

LAWRENCE, GEORGE NEWBOLD (1806-95). An American ornithologist, born in New York City. He was in the drug business until 1862, when he left it to devote himself to ornithology, upon which he had already spent much study. His collection of 8000 specimens, bought by the American Museum of Natural History in New York City, includes not only a very full list of birds found in the United States, but more than 300 new species from Mexico, Central and South America, and the West Indies. He was a member of many scientific societies, contributed much to ornithological literature, and was a collaborator with Spencer F. Baird and John Cassin in *The Birds of North America* (1860).

LAWRENCE, SIR GEORGE ST. PATRICK (1804-84). An English soldier, born in Trincomalee, Ceylon. He was the brother of the first Lord Lawrence and of Sir Henry Montgomery Lawrence. Educated at Foyle College, Londonderry, and at Addiscombe College, he entered the army in 1822, was adjutant of his regiment, the Second Bengal Light Cavalry, from 1825 until 1834, and fought in the Afghan War. Afterward he was political assistant and secretary to MacNaghten, the Envoy to Afghanistan, and was in Kabul during the insurrection when MacNaghten was killed (1841). In 1848 he was appointed political agent at Peshawar and was prisoner for a year during the second Sikh War. Later he was active as political agent in Mewar, Rajputana, until 1857. When the great Mutiny broke out, he was for a time in command of all the forces in Rajputana. He retired with the rank of lieutenant general in 1867. His *Forty-three Years in India* was edited by Edwards and appeared in 1874.

LAWRENCE, SIR HENRY MONTGOMERY (1806-57). An English brigadier general and colonial administrator, born at Matara, Ceylon. He was the elder brother of Lord Lawrence (q.v.) and was likewise famous as an administrator. He was Chief Commissioner of Lucknow, and virtually Governor of Oudh when the Indian Mutiny broke out. While in command of the handful of heroic men who defended the women and children in the Residency of Lucknow, Sir Henry was wounded by the explosion of a shell and died July 4, 1857. He was the founder of the Lawrence Asylum at Octamund, for the reception of the children of the European soldiers in India, and was the author of a volume of *Essays, Military and Political* (1859), which were originally published in the *Calcutta Review*. St. Paul's Cathedral contains a monument to his memory. Consult: J. J. M. Edwardes and Herman Merivale, *Life of Lawrence* (3d ed., New York, 1873); Innes, *Sir Henry Lawrence* (London, 1908); F. P. Gibbon, *The Lawrences of the Punjab* (ib., 1908).

LAWRENCE, JAMES (1781-1813). An American naval officer. He was born in Burlington, N. J., entered the United States navy as a midshipman in 1792, became a lieutenant in 1802, and in 1804-05 distinguished himself in

the war with Tripoli, commanding a gunboat and serving as second in command in Decatur's expedition to burn the captured *Philadelphia* under the guns of the shore batteries. In 1808 he served as first lieutenant on the *Constitution* and then commanded successively the *Argus*, the *Vixen*, and the *Wasp* until 1811, when he was promoted to be captain and was placed in command of the *Hornet*. In 1812 he cruised with Captain Bainbridge's squadron along the South American coast, and on Feb. 24, 1813, captured the slightly inferior British brig-of-war *Peacock*, after a spirited engagement of 15 minutes, near the mouth of the Memerara River—the *Hornet* losing only one man killed and two wounded. For this success he received a gold medal from Congress and was placed in command of the *Chesapeake*, then lying in Boston harbor. On June 1, 1813, several days after taking command, he attacked the British frigate *Shannon*, about 30 miles off Boston. After a bloody engagement of 15 minutes, in which he was mortally wounded, the *Chesapeake* was captured, and Lawrence was taken with his ship to Halifax, where on the 5th he died. While being carried below during the engagement, he uttered the words "Don't give up the ship," which became a motto in the navy. Consult: J. M. Niles, *Life of O. H. Perry* (Hartford, 1821); Albert Gleaves, *J. Lawrence, Captain U. S. Navy* (New York, 1904); Roosevelt, *Naval War of 1812* (2 vols., ib., 1904).

LAWRENCE, JOHN LAIRD MAIR, first BARON LAWRENCE (1811-79). An English officer and Governor-General of India. The sixth son of Lieutenant Colonel Alexander Lawrence, he was born at Richmond, Yorkshire, March 24, 1811. He received his early training at Foyle College, Londonderry, and at Wroxall Hall, near Clifton, and in 1827 he won a presentation scholarship to Haileybury College, where he obtained the prize for Bengali, and passed third in the examination for the Bengal Presidency cadetship. He landed at Calcutta in February, 1830, and for many years was employed at Delhi as a magistrate and a land-revenue officer. On the annexation of the Punjab Lawrence was appointed Commissioner and afterward Lieutenant-Governor of the Punjab. The restless Sikhs became so attached to his firm and beneficent rule that at the outbreak of the Indian Mutiny Lawrence was enabled to send troops to the relief of Delhi and elsewhere and thus was instrumental in maintaining British dominion in India. On his return to England he received the thanks of Parliament, with the grant of a pension of £1000 a year. He was made Baronet in 1858 and Privy Councillor in 1859. In 1861 Lawrence was created a Knight of the Star of India. At the close of 1863 he was appointed to succeed Lord Elgin as Viceroy of India and was made a member of the India Council. His administration lasted until 1869, in which year he was created Baron Lawrence of the Punjab and of Grately. At the first election of the London School Board, in 1870, Lord Lawrence was elected chairman. He died June 26, 1879, and was buried in Westminster Abbey. Consult: R. B. Smith, *Life of Lord Lawrence* (New York, 1883); Richard Temple, *Lord Lawrence* (London, 1889), in the "English Men of Action Series"; F. M. Holmes, *Four Heroes of India* (ib., 1892); C. U. Aitchison, *Lord Lawrence and the Reconstruction of India under the Crown* (Oxford, 1897), in the "Rulers of India

Series"; F. P. Gibbon, *The Lawrences of the Punjab* (London, 1908).

LAWRENCE, SAINT, THE DEACON. One of the most celebrated martyrs of the early Church, the subject of many ancient panegyrics and of one of the most elaborate of the hymns of Prudentius. He was one of the deacons of Rome in the pontificate of Sixtus II (257-258) and as such was especially charged with the care of the poor and the orphans and widows. In the persecution of Valerian, being summoned, according to the legend, before the prætor as a Christian, and being called on to deliver up the treasures of the Church, he mockingly produced the poor and sick of his charge, declaring that "those were his treasures"; and on his persisting in his refusal to sacrifice, being condemned to be roasted on a gridiron, he continued throughout his tortures to mock his persecutors. Many of the details of his martyrdom are probably due to the imagination of the poetical narrator; but the martyrdom is unquestionably historical and dates from the year 258. His feast is celebrated on August 10. The ground plan of the Escorial (qv) is supposed to be that of a gridiron in representation of the instrument of the martyr's death. It was erected in his honor, because on his day, Aug. 10, 1557, the forces of Philip II of Spain won a great victory over the French at Saint-Quentin.

LAWRENCE, STRINGER (1697-1775). An English soldier, born at Hereford. He was appointed ensign at Gibraltar in 1727, later served in Flanders, and in 1748 went to India with the rank of major to hold chief command of the East India Company's troops. He defeated the French at Cuddalore that same year, but was captured at Ariancopang and was held a prisoner until the Peace of Aix-la-Chapelle. In 1749 he captured Devicota in Tanjore, Robert Clive then serving under him as lieutenant. After a stay in England in 1750-52, Lawrence relieved Trichinopoly in 1752, defeated a superior force of French at Bahur in the same year, and again relieved Trichinopoly in 1753. He was superseded in the chief command by Col. John Adlercron in 1754, but volunteered to serve with that officer in 1757 in the fighting around Wandiwash. Holding the local rank of brigadier general, he commanded in various operations in 1757-59, including the defense of Fort St. George during the siege by the French in 1758. He returned to England in 1759 with the rank of major general. The East India Company erected a monument to him in Westminster Abbey.

LAWRENCE, SIR THOMAS (1769-1830). An English portrait painter. He was born at Bristol, May 4, 1769. His father, who had been educated for the law, was an actor and afterward an innkeeper. At the age of 10 Lawrence portrayed the notables of Oxford in crayon, and when his father removed to Bath, his son's studio, although he was but 12 years old, was a favorite resort of beauty and fashion. In his seventeenth year he began to paint in oils, and in 1787 he went to London, exhibiting a number of paintings and portraits at the Academy, the schools of which he entered. His attractive manner and appearance won his way into high society, and in 1789 he had attained court patronage, and in the following year his portrait of the actress Miss Farren (Countess of Derby) established his reputation. This portrait, now in the J. Pierpont Morgan collection (Metro-

politan Museum, New York), was never surpassed by his later works. In 1791 George III induced the Academy to elect him an associate against its own rules, since he was only 21—an honor never since repeated. In 1792 he succeeded Sir Joshua Reynolds as painter to the King, whose portrait he painted in the same year. He was in high favor with George IV, who knighted him in 1815.

In 1818 he was sent to Aix-la-Chapelle to portray the European sovereigns and nobles there assembled at the congress for regulating European affairs, including the emperors of Austria and Russia, the King of Prussia, and Prince Metternich. At Rome he was received as a second Raphael and assigned apartments in the Quirinal, where he painted two of his best portraits, those of Pius VII and Cardinal Gonsalvi. He was made a member of the academies of Rome and Florence, and on the evening of his return to England, in 1820, he was elected president of the Royal Academy. In 1825 he was sent to Paris to portray the King and the Dauphin. He possessed one of the finest collections of drawings of the old masters ever in private hands, part of which is now in the Museum of Oxford. He died in London, Jan. 7, 1830.

Sir Thomas was the most celebrated portrait painter of his day, but, in the reaction against former extravagant praises, scant justice is now done him. He had an unusually acute perception of the graces of society—the elegant airs of the men and the gracious smiles of the ladies. His execution was facile and at best wonderfully free and sure, his composition and draftsmanship were good, but his portraits often lacked character, and his color, though brilliant, was sometimes hard and glassy. He succeeded best in his portraits of women, with whom indeed he was more popular. His impressionable nature involved him in many love affairs, the most interesting of which, his alternating affection for the two daughters of the celebrated actress Mrs. Siddons, is described in the work by Knapp cited below. His best works are his drawings in crayon and pencil. His few historical pieces were of little value. Among his most notable portraits are the series of the participants in the Congress of Aix-la-Chapelle, noticed above, in Waterloo Gallery, Windsor Castle. The National Gallery possesses those of Angerstein, Benjamin West, Mrs. Siddons, Miss Caroline Fry, Mrs. Francis Robertson, J. P. Kemble as "Hamlet," Princess Lieven, Philip Sanson, and "Child with a Kid." In the South Kensington Museum are those of Queen Caroline, Sir C. E. Carrington, his first wife Paulina, Thomas Wentworth and his Secretary, and "Head of a Lady." In the Wallace collection are Miss Maria Siddons, portrait of a Lady, and the Countess of Blessington. In the National Portrait Gallery, there are George IV, Lord Eldon, Wilberforce, Warren Hastings, and Thomas Campbell. The Metropolitan Museum of Art possesses four good examples, Lady Ellenborough, Rev. William Pennicott, Miss Baring, and John Julius Angerstein. Lawrence is well represented in American private collections, as those of E. T. Stotesbury, Philadelphia, and the Walters Gallery (Baltimore), which contains the Countess of Sutherland, the Countess of Wilton, and Mrs. Foote. In the Boston Art Museum are Lord and Lady Lyndhurst and several others.

Bibliography. The best monographs on Lawrence are by Lord Ronald Gower (London, 1900) and Sir Walter Armstrong (ib., 1913). Other works of interest are Williams, *Life and Correspondence of Sir Thomas Lawrence* (London, 1831); Lewis, *Imitations of Sir Thomas Lawrence's Finest Drawings* (ib., 1839); Knapp (ed.), *An Artist's Love Story: Told in the Letters of Sir T. Lawrence, Mrs. Siddons, and her Daughters* (ib., 1905).

LAWRENCE, SIR WILLIAM (1783-1867). A distinguished English surgeon, born at Cirencester in Gloucestershire. He was apprenticed in London in 1800 to Mr. Abernethy, by whom he was appointed demonstrator of anatomy at St. Bartholomew's Hospital in 1803. He was made surgeon to the hospital and was chosen fellow of the Royal Society in 1813. In 1815 he became one of the professors of anatomy to the Royal College of Surgeons and in 1828-29 succeeded his teacher, Abernethy, as lecturer on surgery at St. Bartholomew's. Taking from this period onward an active share in questions of reform, Lawrence made innumerable enemies, though his reputation as a surgeon and the importance of his position as a medical practitioner, together with his fame as a valuable contributor to medical literature, continued to bring him into recognition and power. As sergeant surgeon to the Queen of England, he succeeded Sir Benjamin Brodie, receiving at the same time a baronetcy. Lawrence died of paralysis at Whitehall. His writings are very numerous; the following are the most important: *A Description of the Arteries of the Human Body, Reduced into the Form of Tables*, translated from the Latin of Adolphus Murray, professor of anatomy at Upsala; *The Treatment of Hernias; An Introduction to Comparative Anatomy and Physiology, being the Introductory Lecture delivered at the Royal College of Surgeons in 1819* (1819); *A Treatise on the Venereal Diseases of the Eye* (1830); *A Treatise on the Diseases of the Eye* (1843); *A Treatise on Ruptures* (1810; 5th ed., 1838); *The Hunterian Oration Delivered at the Royal College of Surgeons, 1834* (1834); *Lectures on Comparative Anatomy, Physiology, Zoology, and the Natural History of Man* (1848).

LAWRENCE, WILLIAM (1819-99). An American jurist and politician, born at Mount Pleasant, Ohio. He graduated at Franklin College in 1838 and at the Cincinnati Law School in 1840. From 1845 to 1847 he was editor and proprietor of the *Logan County Gazette* and later edited the *Western Law Journal*. In 1846-47 he served in the Lower House of the State Legislature, in 1848-53 was a State Senator, and from 1857 to 1864 was judge of the Court of Common Pleas and of the District Court. He had some military experience at Cumberland and New Creek, in 1862, as colonel of the Eighty-fourth Ohio Volunteers; was a member of Congress in 1865-71 and in 1873-77, and in 1880 became First Comptroller of the United States Treasury—a position which he held until his resignation in 1885. Among his published works are: *The Treaty Question* (1871); *The Law of Religious Societies and Church Corporations* (1873); *The Organization of the Treasury Department of the United States* (1880); *The Law of Claims against the Government* (1875); *Decisions of the First Comptroller in the Department of the Treasury of the United States* (1881-85).

LAWRENCE, WILLIAM (1850-). An American Protestant Episcopal Bishop, grandson of Amos Lawrence and son of Amos A. Lawrence. Born at Brookline, Mass., he graduated at Harvard in 1871 and in 1875 at the Episcopal Theological School, Cambridge. In 1876 he became rector of Grace Church, Lawrence, Mass. He was elected professor of homiletics and pastoral theology in the Episcopal Theological School in 1884, became its dean in 1888, was a university preacher at Harvard from 1888 to 1891, and in 1893 was elected, and in the following year was consecrated, Bishop of Massachusetts to succeed Phillips Brooks. He wrote *Life of Amos A. Lawrence* (1889); *Visions and Service* (1896); *Life of Roger Wolcott, Governor of Massachusetts* (1902); *Study of Phillips Brooks* (1903).

LAWRENCE, WILLIAM BEACH (1800-81). An American jurist and political leader, born in New York City and educated at Columbia College. He studied law and after two years' residence in Europe was admitted to the New York bar in 1823. In 1826-27 he was Secretary of the American Legation in London under Gallatin, served until 1828 as chargé d'affaires, returned to America in 1832, and, having entered into partnership with Hamilton Fish, soon attained distinction in the practice of law. He lectured for a time on political economy at Columbia College and was one of the promoters of the Erie Railroad. He made Rhode Island his permanent home in 1850, became Lieutenant Governor in 1851, acted as Governor in 1852, and was a member of the State Constitutional Convention of 1853. He lectured on international law in Columbian University, Washington, D. C., and became widely known for his interpretation of disputes arising out of the provisions of the Treaty of Washington of 1871. His writings are marked by a broad and liberal interpretation of international relations. Chief among them are: *The Bank of the United States* (1831); *Institutions of the United States* (1832); *Discourses on Political Economy* (1834); *Biographical Memoir of Albert Gallatin* (1843); *The Law of Charitable Uses* (1845); an annotated edition of Wheaton's *Elements of International Law* (1855); *Visitation and Search* (1858); *Commentaire sur les éléments du droit international* (4 vols., 1868-80); *The Treaty of Washington* (1871); *Belligerent and Sovereign Rights as Regards Neutrals during the War of Secession* (1873); *Etudes sur la juridiction consulaire et sur l'extradition* (1880).

LAWRENCEBURG. A city and the county seat of Dearborn Co., Ind., 22 miles by rail west of Cincinnati, Ohio, on the Ohio River, and on the Baltimore and Ohio Southwestern, and the Cleveland, Cincinnati, Chicago, and St. Louis railroads (Map: Indiana, H 6). It has manufactures of coffins, flour, buggies, saws, pumps, furniture, barrels, whisky, beer, and veneers. There is a public library here. Settled in 1802, Lawrenceburg was first incorporated in 1847. The present government is administered by a mayor, chosen every four years, and a unicameral council. The electric-light plant is owned by the municipality. Pop., 1900, 4326; 1910, 3930.

LAWRENCE COLLEGE. A college affiliated with the Methodist Episcopal church and located at Appleton, Wis., chartered in 1846 and named the Lawrence Institute of Wisconsin,

in honor of its principal donor, Hon. Amos A. Lawrence, of Boston. It was opened for students in 1849, when its present name was assumed. In 1914-15 the faculty numbered 44, with a student enrollment of 639, comprising 441 students in the collegiate department and 198 music students. The college confers the degrees of B.A. and of M.A. It has a library of 34,000 volumes. Its productive endowment in 1914 was \$910,000, its income \$89,000, the value of its buildings \$516,000, and the total property under its control was estimated at \$1,439,200. The president in 1914 was Samuel Plantz, Ph.D., D.D.

LAWRENCE SCIENTIFIC SCHOOL. See HARVARD UNIVERSITY.

LAWRENCEVILLE. A city and the county seat of Lawrence Co., Ill., 141 miles east of St. Louis, Mo., on the Baltimore and Ohio Southwestern and the Cleveland, Cincinnati, Chicago, and St. Louis railroads (Map: Illinois, J 8). It is in a rich agricultural and oil country, its chief industry being the refining of crude oil. There are municipally owned water works and an electric-light plant. Pop., 1900, 1300; 1910, 3235.

LAWRENCEVILLE SCHOOL. An endowed preparatory school for boys at Lawrenceville, N. J., incorporated in 1882 on the John C. Green Foundation. The school was founded in 1810. There are five forms. In the last three years electives are allowed. The buildings include 15 masters' houses, an upper house reserved for the graduating class, three recitation buildings, with an auditorium, a library of over 5000 volumes, a hall for the literary societies presented by the alumni in 1913, a chapel, and a gymnasium. The school property includes over 300 acres of ground. The school in 1913-14 had a teaching force of 40 and an enrollment of 400 students.

LAW REPORTS. See REPORT.

LAWS, NAVIGATION. See NAVIGATION LAWS.

LAWS, SANITARY. See SANITARY LAWS.

LAWS, SUMPTUARY. See SUMPTUARY LAWS.

LAWS AND USAGES OF WAR. A code of law governing the conduct of civilized warfare. It has special reference to the treatment of prisoners, noncombatants, spies, traitors, private property, rights of capture, opening of hostilities, occupation and conquest, blockades, rights and obligations of neutrals, Red Cross, etc. Many of the clauses of the code have been approved and agreed to by international conventions, while others have become sanctioned by long usage and the demands of civilization. See WAR; INTERNATIONAL LAW. Consult also *Rules of Land Warfare* (Washington, Government Printing Office, 1914).

LAW SCHOOL. A school, or institution of learning, where students are taught the knowledge of the law. Law schools existed in Rome as early as the beginning of the third century, and more than one of the mediæval universities rested their fame on the excellence of their legal instruction and the large number of students of the law which they drew from all parts of Europe. In the modern world law schools, as independent institutions or as separate "schools" of a university, are a purely American development, legal instruction in England being almost exclusively carried on in the Inns of Court and, in Scotland and on the continent of Europe, by faculties of law in the universities. In the United States law schools have usually originated as independent institutions, gener-

ally under the control and governed by the ideals of the legal profession; but there is a growing tendency to bring them under the influence and control of the universities. As admission to the bar in America does not depend on the systematic instruction of a law school, but upon ability to pass a State or judicial examination, the requisite preparation for the bar has usually been gained through an apprenticeship in a lawyer's office or by private study. Of late years, however, students of the law have flocked in increasing numbers to the law schools, and these have consequently greatly increased in number, size, and importance. See LEGAL EDUCATION.

LAWSON, ANDREW COWPER (1861-). An American seismologist. He was born at Anstruther, Scotland, graduated from the University of Toronto in 1883, and received the degree of Ph.D. from Johns Hopkins in 1888. A geologist on the Geological Survey of Canada from 1882 to 1890, and thereafter professor of mineralogy and geology at the University of California, he attended geological congresses at London (1888), St. Petersburg (1897), and Toronto (1913), served as chairman of the Earthquake Investigating Commission in 1906, and was president of the Seismological Society of America in 1909-10.

LAWSON, CECIL GORDON (1851-82). An English landscape painter, born at Wellington, Shropshire. He studied under his father (a portrait painter) and his brother Wilfrid and first won recognition in 1878 with "The Minister's Garden" (Manchester Gallery). His poor health and early death alone prevented him from becoming one of the greatest English landscape painters. Paintings like "The August Moon" (Tate Gallery), "The Hop Gardens of England," "In the Valley, a Pastoral," "The Storm Cloud," and "In the Wharfedale, Yorkshire" (South Kensington Museum), a water color, reveal a frank independence, exceptional understanding of light and color, and poetic imagination. Lawson also designed book illustrations. Consult E. W. Gosse, *Cecil Lawson: A Memoir* (London, 1883), and Owen, "In Memoriam, Cecil Gordon Lawson," in *Magazine of Art* (ib., 1894).

LAWSON, ERNEST (1873-). An American landscape painter. He was born in Halifax, Nova Scotia, and studied in Kansas City, Mo., and in New York City at the Art Students' League under Twachtman and James Alden Weir. After spending two years in France he returned to America in 1904. His art is impressionistic in the best sense; for he possesses a direct vision, a personal sense of nature, and a power of rendering light and atmosphere which enable him to invest the sombre confusion of great cities and the most commonplace portions of the American countryside with poetry and charm. Lawson was awarded the Sesnan prize at the Pennsylvania Academy in 1907, and the first Hallgarten prize at the National Academy in 1908 for "Ice on the Hudson," which caused his election as associate of the Academy. Among his best paintings are "Near High Bridge," "A Breezy Day," "Early Summer," "The Abandoned Farm" (National Gallery, Washington), "Excavations," "Harlem Flats," "Road down the Palisades" (1911),

"Harlem River" (1911), "Hillside at Inwood" (1912), "Evening, Palisades" (1913).

LAWSON, JOHN (?-1712). An American Colonial official and writer. He made the trip on horseback from Charleston to the settlements on the Neuse in the Northern Colony. On the way he kept a journal describing minutely the country, the settlers, the Indians, animals, and plants. Soon he was made surveyor-general of the Colony and explored much territory before unknown. He published *A New Voyage to Carolina, Containing the Exact Description and Natural History of that Country, together with the Present State Thereof; and a Journal of a Thousand Miles Travel'd thro' Several Nations of Indians, Giving a Particular Account of their Customs, Manners, &c.* (London, 1709). His activity aroused the anger of the Indians, who saw the resulting encroachment on their territory. In 1711, in company with Baron de Graffenried (q.v.), the head of the settlement of German Palatines and Swiss on the lower Neuse, he made a trip up the river and was captured by the Tuscaroras. After a time De Graffenried was freed, but Lawson, who had quarreled with a petty chief, was executed.

LAWSON, THOMAS WILLIAM (1857-). An American banker and speculator, born at Charlestown, Mass., and educated in the public schools of Cambridge. Beginning business as a banker and broker in Boston in 1870, he soon became prominent upon the stock exchanges of the country as a daring speculator, especially in copper properties. Eventually he became senior member of the firm of Lawson, Arnold & Co (members of the Boston and New York Stock Exchanges), and president of the Thomas W. Lawson Company, the Trinity Copper Company, the First National Copper Company, and (1907) the Bay State Gas Company of Delaware. Under the title of "Frenzied Finance" he wrote for *Everybody's Magazine* in 1904-05 a series of widely read articles purporting to expose the iniquities of stock, copper, and oil speculation. A man of great wealth himself, Lawson created a sensation in financial circles, and throughout the country in general, by his attacks on the "system." In 1901 he built a yacht to defend the *America's Cup*, but was excluded from competing by racing officials. His publications include: *The Krank* (1887); *History of the Republic in Part* (1888); *Secrets of Success* (1888); *Collection of Poems and Short Stories* (1888); *Lawson's History of the America's Cup* (1902); *Frenzied Finance* (1905); *Friday the Thirteenth* (1907); *The Remedy* (1912); *High Cost of Living* (1913).

LAWSON, VICTOR FREMONT (1850-). An American newspaper editor and publisher, born in Chicago. He was early a printer. The *Chicago Daily News*, which he bought in 1876, was made a success by Lawson in partnership with Melville E. Stone (q.v.); in 1888 he became sole proprietor. The morning edition of the paper, started in 1881, subsequently became known as the *Chicago Record*. It was merged with the *Times-Herald* under the name of the *Record-Herald* in 1901 and with the *Inter-Ocean* under the name of the *Chicago Herald* in 1914. Lawson was especially active in the support of the movement for a United States Postal Savings Bank, and by means of his *Daily News Fresh Air Fund* he maintained the Lincoln Park Sanitarium. He was at one time president of the Associated Press.

LAWSON, SIR WILFRED, second BARONET (1829-1906). An English legislator and temperance advocate. The son of Sir Wilfrid Lawson, he was born near Carlisle and early came into prominence in connection with his labors in the cause of total abstinence. In 1859 he was elected to Parliament for Carlisle, and in 1864, having identified himself with the radical wing of the Liberal party, he introduced in the House of Commons a bill providing for permissive or local option closing of saloons. In consequence of this measure, which failed to pass, he lost his seat in Parliament in the following year. On his father's death, in 1867, he succeeded to the family title and estates, and in 1868, as a follower of Mr. Gladstone, and especially as a supporter of Irish disestablishment, was returned to Parliament for Carlisle. He represented that city until 1885, in the meantime having the satisfaction of seeing his Local Option Bill, which he had persistently advocated, pass by a majority of 26 votes in 1880, a success repeated in 1881 and 1883. He was defeated by 10 votes in 1885, but in 1886 he was elected by a large majority to represent the Cocker mouth Division of Cumberland in Parliament as a Gladstonian Liberal. He was again returned in 1892 and in 1895, but in 1900 lost his seat by 109 votes. In 1903 and 1906 he was returned for Camborne Division, Wales. During his long public life Lawson was associated with many reform measures having to do with women's rights, Sunday closing, the opium traffic, and the abolition of Church rates. An enthusiastic sportsman, he was long master of the Cumberland foxhounds. With F. C. Gould he published *Cartoons in Rhyme and Line* (1905).

LAWSONIA. See HENNA.

LAWS RELATING TO SEAMEN. See SEAMEN, LAWS RELATING TO.

LAW TERMS. In England and Ireland, those periods of the year during which the law courts sit in banc, or in full court, to dispose of business. These are of ancient origin and are now fixed by statute as follows: Hilary term begins January 11, ends January 31; Easter term begins April 15, ends May 8; Trinity term begins May 22, ends June 12; Michaelmas term begins November 2, ends November 25. In a few instances the ordinary terms of court were so designated in the American Colonies, but the practice never became general and did not survive the Revolution.

LAWTON. A city and the county seat of Comanche Co., Okla., about 90 miles southwest of Oklahoma City, on the St. Louis and San Francisco and the Chicago, Rock Island, and Pacific railroads (Map: Oklahoma, C 4). It contains Fort Sill, a United States military post, the Fort Sill Indian School, the Wichita National Forest and Game Preserve, and Medicine Park, a summer resort. Farming, cotton raising, and the manufacture of cottonseed oil constitute the chief industries, an extensive irrigation project being carried on in the vicinity by the government. Lawton owns its water works. Pop., 1900, 5562; 1910, 7788.

LAWTON, HENRY WARE (1843-99). An American soldier, born at Manhattan, now a part of Toledo, Ohio. He served with distinction in the Union army during the Civil War, rising from the rank of sergeant to that of brevet colonel of volunteers (1865). On the recommendations of Generals Sherman and

Sheridan he was commissioned as second lieutenant in the Forty-first Infantry in 1866. Thereafter he saw much active service in fighting Indians, especially in Arizona, and became lieutenant colonel in 1889. In June, 1898, he accompanied the American army which invaded Cuba; the Second Division of the Fifth Army Corps, of which he was in command, took El Caney. His efficiency in this position won for him promotion to the rank of colonel in the regular army and brigadier general of volunteers. After the fall of Santiago he was appointed commander of the district and made major general. In December, 1898, General Lawton, ordered to the Philippines as second in command to General Otis, took command of the First Division of the Eighth Army Corps. In the Islands he was almost constantly in active service until the time of his death, Dec. 19, 1899, when he was killed in an attack upon intrenched Filipinos at San Mateo, Luzon. He had gained a reputation for great courage and skill.

LAWTON, WILLIAM CRANSTON (1853-). An American author and educator, born at New Bedford, Mass. He graduated from Harvard in 1873; studied at Berlin in 1882-83, the year before having been a member of the Assos expedition; from 1895 to 1907 was professor of Greek language and literature in Adelphi College, Brooklyn; and then for four years was owner and principal of the School of the Lackawanna at Scranton, Pa. Thereafter he was engaged in literary work and lecturing. His writings include: *Three Dramas of Euripides* (1889); *Art and Humanity in Homer* (1896); *New England Poets* (1898); *Successors of Homer* (1898), a volume of poems, *Folia Dispersa* (1895); histories of Greek and Latin literature (1903); *Ideals in Greek Literature* (1905). He was classical editor of, and the leading classical contributor to, Warner's *Library of the World's Best Literature*.

LAWYER. A generic term applicable to all persons who have made a special study of the law and who are entitled to the privilege of advising clients and of representing them in legal proceedings. In primitive society the lawyer, who may also be the lawgiver or lawfinder, is usually the priest, the repository of both the divine and the customary law. In all stages of human society he has exercised an important and usually a determining influence on legal development. As human society grows in complexity and the law regulating social relations more extensive and complicated, the expert, learned in the law, becomes a more and more important instrumentality in the administration of justice. The term lawyer includes advocate, attorney, counselor, barrister, proctor, solicitor (qq.v.), and even the judicial officers who collectively make up the bench and bar.

At Rome the era of civil lawyers begins about three hundred years before Christ with Coruncanus, the first plebeian *pontifex maximus*. From his time *prudentes*, persons learned in the law of the state, were a recognized class, acting as professional counsel and public expositors of legal principles. In some respects their work and influence differed widely from those of the modern lawyer. In the first place, they were called on by the magistrates for opinions in litigated cases. Oftentimes these magistrates, such as prætors and curule ædiles, had no legal learning and hence were forced to seek advice from others. But it was also customary for those

who had enjoyed a legal training and experience to call in the assistance of other *prudentes*. In this way it happened that the Roman lawyer exercised an influence over judicial decisions which has never belonged to the English or American bar. See CIVIL LAW; JURISCONSULT.

The first official recognition of lawyers as a professional class in England appears in the reign of Edward I, when the Statute of Westminster I declares the penalty for certain misconduct by "serjeant-counters." Its evolution had undoubtedly been slow, but the statute just referred to is evidence that "serjeant-advocates" had gained a foothold in English courts prior to 1275. Apparently the King was the first to employ professional counsel, for their earliest title is serjeants or servants of the King. Having asserted this privilege for himself, he conceded it to others. For a time private litigants are forced to obtain a special license from the King as a condition of employing counsel to appear for them in court. Later the King licenses the counsel, and litigants are free to employ any of such favored practitioners of the law. The bar now becomes an integral part of the judicial system, having rights, duties, and functions as distinct and almost as important as those of the bench. From this time on, the opinion of the legal profession "is among the most powerful of the forces that shape the law."

According to the census of 1910, the professional lawyers including judges and justices of the United States numbered 114,704, thus constituting one in every seven hundred and eighty-five of the male population. Two-thirds of the Presidents have been lawyers. A like proportion has obtained among United States Senators, while more than half of the Representatives in Congress, as well as of State legislators, have been members of the legal profession. Consult: James Muirhead, *Historical Introduction to the Private Law of Rome* (2d ed., London, 1899); Pollock and Maitland, *History of English Law before the Time of Edward I* (2d ed., 2 vols., Cambridge, 1903); Sir H. J. Maine, *Ancient Law: Its Connection with the Early History of Society and its Relation to Modern Ideas* (4th American ed. from 10th London ed., New York, 1906); Charles Warren, *History of the American Bar, Colonial and Federal, to the Year 1860* (Boston, 1911); J. A. Willard, *Half a Century with Judges and Lawyers* (ib., 1895).

LAWYER. A local name in the middle parts of the United States for (1) the bowfin (*q.v.*) and (2) the gray snapper (*Neomenis*). The burbot is sometimes called lake lawyer.

LAXATIVE (from Lat. *laxativus*, loosening, from *laxare*, to loosen, from *laxus*, loose). A medicine which simply unloads the bowels and is not able to cause active purgation, even if given in large doses. Purgatives are stronger, purging actively, while not capable of acting as poisons, even when used in large amount. There are two qualities by virtue of which food is laxative. The principal one is bulk. All aliment which contains a large amount of innutritious material affords a large residuum. It therefore distends the intestines and stimulates the onward propulsion of the intestinal contents. Articles of diet which are very largely assimilable and afford but little residuum are constipating. Flesh-eating carnivora are habitually constipated, while herbivora are the oppo-

site. While cracked wheat is a laxative, fine wheat flour, from which the wheat husk, constituting bran, has been removed, favors costiveness. Unbolted flour, Indian meal, and oatmeal are laxative. Molasses, brown sugar, ripe fruits, especially those of the citrus family, as well as prunes, figs, tamarinds, etc., are among the substances having decided laxative qualities. Cassia fistula, manna, magnesia, and sulphur are the drugs usually included under the subdivision laxatives of the cathartic group. Many of the older laxatives are now being aban-

... in the treatment of chronic ... : several newer remedies substituted. Among the latter may be mentioned phenolphthalein, a mild, nongripping laxative in small doses. It is often incorporated in agar agar (*q.v.*), also a laxative, which acts mainly by increasing the bulk of the intestinal contents and so stimulating peristalsis. Another laxative, which acts in a purely mechanical manner, is liquid paraffin, known also as liquid vaseline, liquid albolene (*q.v.*), Russian mineral oil, and under many proprietary names. Liquid paraffin has come into extensive use since it was first advocated, by Sir Arbuthnot Lane, for chronic intestinal stasis with auto-intoxication. The substance passes unchanged through the alimentary canal and merely softens and increases the bulk of its contents. It is also thought to have a slight inhibitory effect on some varieties of intestinal bacteria, but this has not been demonstrated. Laxatives which stimulate the bile production or supplement its deficiency are sodium glycocholate and sodium taurocholate. These are given largely in place of the older preparations of ox gall. They hold lecithin and cholesterin in solution in the bile, help to carry fats and soaps into the villi of the intestine, and are then absorbed in the capillaries and return to the liver by way of the portal vein. See CATHARTIC; PURGATIVE.

LAXENBURG, lăk'sen-bŭrk. A village of Lower Austria, 9 miles south of Vienna, on the Schwechat River. Pop., about 1000. It is noted for its handsome Imperial park and gardens, in which are the old castle (founded in 1377), the new castle (begun in 1600), and the Franzensburg in a mediæval style of architecture, built on an islet in the lake, between 1799 and 1836, and containing fine art collections.

LAY, BENJAMIN (1681-1759). A British-American philanthropist and one of the earliest opponents of slavery, born of Quaker parentage at Colchester, England. At the age of 18 he became a sailor, but subsequently, after his marriage in 1710, lived for a time at Colchester. In 1718 he settled as a merchant in the island of Barbados, where he soon became convinced of the great iniquity of slavery. His agitation against the system rendered him so unpopular that he left the island in 1734 and went to Philadelphia. There he continued to oppose slavery and lost no opportunity to give expression, often by extravagant methods, to his abhorrence of it. Failing to get a sympathetic hearing in Philadelphia, he left that city in anger and disgust and for several years lived in a forest cave, subsisting on vegetables. He wrote a number of tracts, one of which, *All Slave-Keepers, that Keep the Innocent in Bondage, Apostates* (1737), was published by Benjamin Franklin. Lay lived to see a great change in the attitude of the Friends towards the question of slavery, and it was partly owing to

his efforts that the society ultimately resolved to disown all members who persisted in holding slaves. Lay was also a reformer along other lines. In 1737 he proposed humane improvements in the cruel criminal code of the time, and he opposed also the use of tobacco, tea, and animal food. He died at Abington, Pa., and was buried in the Friends' burial ground. Memoirs of him were published by Vaux and Francis. Consult also Bowden, *The History of the Society of Friends in America* (London, 1850), and Turner, *The Quakers* (ib., 1889).

LAY, HENRY CHAMPLIN (1823-85). An American Protestant Episcopal bishop. He was born at Richmond, Va., graduated at the University of Virginia in 1842, and subsequently at the Theological Seminary at Alexandria. Ordained deacon in 1846, he was minister at the church of the Nativity, Huntsville, Ala., from 1847 to 1858, was consecrated Missionary Bishop of the Southwest in 1859, and was transferred to the diocese of Easton (Md.) in 1869. He wrote *Studies in the Church* (1872) and *The Church and the Nation* (1885).

LAY, JOHN LOUIS (1832-99). An American inventor, born in Buffalo, N. Y. He secured an appointment as second assistant engineer in the navy in July, 1862, and in 1864 invented the torpedo with which Lieutenant Cushing (q.v.) destroyed the Confederate ram *Albemarle*. After the evacuation of Richmond by the Confederate forces he was employed in clearing the James River of obstructions which impeded the advance of Admiral Porter's fleet. On the close of the war he resigned from the service and went to South America, where the government of Peru engaged him to mine the harbor of Callao as a defense against an expected attack by the Spanish fleet. He returned to the United States in 1867 and soon after perfected the Lay dirigible submarine torpedo, which he sold to the United States government.

LAYA, là'yá', JEAN LOUIS (1761-1833). A French dramatist, born in Paris. He was at first influenced by revolutionary ideas, but became disgusted at the Jacobin success. In 1793 he wrote *L'Ami des lois*. This was censured by the commune and the author imprisoned. Freed shortly afterward, he accompanied the Duke of Larochehoucauld to Saxony. Upon returning to France he taught in several colleges and then became connected with the Faculty of Letters in Paris. In 1816 he was elected to the French Academy. Laya cannot be regarded as a great writer. His claim to remembrance rests mostly upon the example of civic courage he presented in writing *L'Ami des lois*. He published also *Nouveau Narcisse* (1786), in collaboration with Lyonné; *Les dangers de l'opinion* (1790); *Jean Calas* (1791); *Les deux Stuarts* (1797); *Falkland* (1798); *Une journée du jeune Néron* (1799); and letters.

LAYAMON, là'yá-mon (fl.1200). The author of the *Brut*, a metrical chronicle of Britain. All that is known of him is told in the opening lines of his poem. He was a priest dwelling at Ernley on the Severn (Arley Regis in North Worcestershire). It came to his mind, he says, to relate the noble deeds of the English; and to this end he traveled about to procure noble books. The book he made most use of was the *Roman de Brut* (1155), by an Anglo-Norman poet named Wace. Wace's poem in turn was derived largely from Geoffrey of Monmouth's

History of the British Kings, written in Latin prose (about 1139). But in his wanderings Layamon gathered other traditions which he turned to good account. His poem derives its name from Brut, or Brutus, a great-grandson of Æneas. After the fall of Troy many of the Trojans, it was believed, were taken to Greece, where their descendants were living as slaves. They are freed by Brut and conducted to Albion. From this point Layamon relates the history of Britain down to the death of Cadwalader, who, according to tradition, was the last of the Celtic kings. He mentions Cymbeline and tells the story of Lear and his unkind daughters, and a large section of his poem is devoted to the deeds of Arthur. The *Brut* is of great philological interest. It exists in two manuscripts which are assigned respectively to about 1200 and 1250. The older and better manuscript contains 32,243 short lines. The verse is at times alliterative, as in Old English or Anglo-Saxon; and again assonance or rhyme is employed in imitation of the French. There occur, however, not more than 100 words of French origin—a fact to which attention has often been called to show that in Layamon's time the French and English tongues had hardly begun to intermingle. The two manuscripts were edited with translation by Frederick Madden for the Society of Antiquaries (3 vols., London, 1847). Consult also Ten Brink, *Early English Literature*, vol. i (trans., New York, 1883), and the *Brut*, part 1 (ed. by F. Brie, Oxford, 1906). See GEOFFREY OF MONMOUTH.

LAYARD, SIR AUSTEN HENRY (1817-94). An English traveler, archaeologist and diplomatist. He was born in Paris of English parents and spent several years of his youth with his father at Florence in Italy. He began the study of law, but before finishing set out on a course of Eastern travel, visited several districts of Asiatic Turkey, and acquired a love for Oriental studies, which he never lost. In 1842 he paid a second visit to Mosul, where the French Consul, P. Botta (q.v.), was conducting excavations on the site of the ancient Nineveh. Layard, several years before Botta, had recognized the importance of these ruins and formed the determination to continue the examination of the site of the ancient city. In 1845 he was able to begin his excavations, being liberally assisted by Lord Stratford de Redcliffe, then British Ambassador at Constantinople. In 1848 he received a generous subvention to carry on the work under the auspices of the British Museum. His excavations were successful to a remarkable degree. He sent to the British Museum a mass of sculptures and inscriptions and discovered among other remains the library of King Assurbanipal. (See ASSYRIA.) The results of his labors were embodied in his works, *Nineveh and its Remains* (1848) and *Nineveh and Babylon* (1853). In 1852 Layard became member of Parliament for Aylesbury and was for a short time Undersecretary of State for Foreign Affairs under Lord John Russell. In 1855-56 he served as lord rector of Aberdeen University. In 1860 he was elected to Parliament from Southwark. From 1861 to 1866 he was again Undersecretary of State for Foreign Affairs. He was appointed Chief Commissioner of Works and Privy Councillor in 1868 and in 1869 went as British Ambassador to Spain. In 1877 he was sent as Ambassador to Constantinople, where he remained until 1880. He was honored

with the Order of the Bath in 1878 and in 1890 became a foreign member of the Institute of France. He died in London, July 5, 1894. Besides the works mentioned above, Layard published: *Monuments of Nineveh* (1st series, 100 plates, 1849; 2d series, 71 plates, 1853), *Inscriptions in the Cuneiform Character from the Assyrian Monuments* (98 plates, 1851); *Early Adventures in Persia, Susiana, and Babylonia* (2 vols., 1887; 2d ed., abridged, 1 vol., 1894); and several works on art. Consult the *Autobiography*, edited by W. N. Bruce (2 vols., New York, 1903). See ASSYRIA; NINEVEH.

LAYBACH, li'băg. A city of Austria. See LAIBACH.

LAYCOCK, THOMAS (1812-76). An English physician. He was born in Wetherby, Yorkshire; was educated at University College, London; studied for the medical profession in Paris and in Göttingen. He became known as a specialist in brain and nervous disorders by a number of learned treatises and contributions to the leading medical societies and journals, and in 1855 succeeded Dr. Alison as professor of the practice of physic and clinical medicine in Edinburgh University. In 1861 he was elected a fellow of the Royal Society of Edinburgh and in 1869 was appointed physician in ordinary to the Queen in Scotland. Of his numerous writings, the more important are: *A Treatise on the Nervous Diseases of Women, Comprising an Inquiry into the Nature, Causes, and Treatment of Spinal and Hysterical Disorders* (1840); *Principles and Methods of Medical Observation and Research* (1856); *The Social and Political Relations of Drunkenness* (1856); *Mind and Brain, or the Correlations of Consciousness and Organization with their Applications to Philosophy, Psychology, Mental Pathology, and the Practice of Medicine* (2 vols., 1859). In the last, his most important work, the fundamental principles of the unconscious action of the brain and the theory of evolutionary development of nerve centres were first promulgated. He also translated and edited Unger's *Principles of Physiology* (1851) and Prochaska's *Dissertation on the Functions of the Nervous System* (1851).

LAY DAYS. In maritime law, the number of days granted in the charter party to the charterer or freighter of a vessel within which to load or unload. Within the lay days no charge for wharfage is made, but after their expiration a sum, usually stated in the charter party, is charged and called demurrage. Lay days begin upon the arrival of the vessel at the usual place for discharging cargo. Sundays are counted in reckoning lay days, unless otherwise provided in the charter party. See DEMURRAGE; MARITIME LAW.

LAYERING, ābū'atshun. An artificial method of plant reproduction somewhat resembling the stolon in nature. A layer is an unsevered branch or stem surrounded by a medium such as soil or moss in which it may strike root. The branch may be bent down and a portion of it buried in the soil, or the branch may be mounded with soil. Generally a wound is made to hasten the process of rooting, but with most plants this is not essential. Some plants require only a few days, others even two years. Layering is a favorite method of multiplying woody plants, such as quince and gooseberry, which do not give satisfactory results with cuttings.

LAYING ON OF HANDS. See HAND, IMPOSITION OF.

LAYNEZ, li'năth, or **LAINEZ**, DIEGO (1512-65). Second general of the Order of Jesuits. He was born at Almazan, Castile, in 1512, educated at the University of Alcalá, visited Paris in 1533, and became an ardent follower of Loyola. He accompanied the latter to Rome, where Pope Paul III appointed him a professor in the College of the Sapienza (1537). Loyola died in 1556, and Laynez was elected general of the Order of the Jesuits in 1558. Offered a cardinal's hat, he refused it, preferring to devote his life to the service of the new order. He represented it in the Council of Trent and was one of the most influential in the formation of its decrees. He laid the foundation at Venice of a college of Jesuits and placed special stress on the importance of education which should influence the minds of the young for the good of the Church. He died in Rome, Jan. 19, 1565. He published little, and his manuscripts are almost illegible. His speeches at the Council of Trent and selections from other writings have been edited by Grisat (2 vols., Innsbruck, 1886). Consult Boers, *Vie du Père Jacques Laynez* (Lille, 1894); Bernhard Duhr, *Geschichte der Jesuiten in den Ländern deutscher Zunge* (2 vols., Freiburg, 1907-13).

LAY OF THE LAST MINSTREL, THE. A narrative poem by Sir Walter Scott (1805).

LAY READER. In the Anglican communion, a layman who is licensed by the Bishop to read morning and evening prayer (with the exception of the absolution), officiate at funerals, and read the sermons of approved divines. The first reformed ordinal prepared under Edward VI contains an office for the admission of readers, and in the following year (1560) five of them were "ordained" in London. It seems to have been the intention of the reformers to preserve the ancient minor order of readers (q.v.), but the office became extinct in the eighteenth century. The last diocese in which lay readers were licensed was that of Sodor and Man, under Bishop Wilson (died 1775). The office was revived by Convocation in 1866, and revised regulations were issued in 1905; now a large number are commissioned in England and in the Episcopal church in America, where a canon passed in 1871 regulates the exercise of their office. Consult: S. F. Hotchkiss, *Importance and Usefulness of Lay Reading* (1892); H. B. Restarick, *Lay Readers* (New York, 1894); *Lay Reader: A Magazine for Church Workers* (London, annually).

LAYS OF ANCIENT ROME, THE. Classical ballads, by Thomas Babington Macaulay (1842). They are four in number, of which "Horatius" is best known.

LAYTHROP, JOHN. See LATHROP, JOHN.

LAZARILLO DE TORMES, li-thă-rē'lyô dă tōr'măs. The first picaresque novel produced in Spain and parent of the entire picaresque literary movement in modern Europe. We know neither the author nor the date and place of the first appearance of the work. It appeared anonymously; and no author's name was accredited to it until 1605, when the Hieronymite monk José de Sigüenza named as its author Fray Juan de Ortega. Two years later (1607) it was accredited by the Belgian Valère André to Diego Hurtado de Mendoza. In 1608 André Schott repeated this assertion, although less categorically. Despite these facts the assigna-

ment of the work to Hurtado de Mendoza was generally accepted, until Morel-Fatio, in 1888, demonstrated the untenability of that position. The earliest-known editions are the three of Alcalá de Henares, Antwerp, and Burgos, all of which appeared in 1554. The story is the scintillating autobiography, in purest Castilian, of a rogue who served many masters, one after another, beginning with a blind beggar, and ending as town crier for Toledo; and in the series of pictures that the author draws for us with a master hand, we see much of the social life and cultural conditions of Spain during that period. And this is true despite our finding certain stories that are mere remodelings of stories to be found in earlier and other literatures. Two continuations (or second parts) appeared—one, anonymously, in 1555, and the other (which is the better one), accredited to H. Luna, in 1620.

LAZARISTS, or CONGREGATION OF THE MISSION OF VINCENTIANS. An order of missionary priests in the Roman Catholic church, founded by St. Vincent de Paul. In 1617, being for a time in the country, in Picardy, he found great need for religious instruction to exist among the peasants and gathered several priests around him to forward this work. As it grew, Adrien Le Bon, prior of St. Lazaire, offered his priory for their use; they took possession of the house in 1632 and got the name of Lazarists from it. The institution was officially approved by the founder's patron, François de Gondi, Archbishop of Paris, in 1626 and by Pope Urban VIII in 1632. As their primary object was to instruct and edify the peasants, it was stipulated in the original deed of endowment that they should "neither preach nor administer any sacrament in towns which are the seat of bishops, archbishops, or courts of justice, except in cases of extreme necessity." Besides their special work they sought to reform the clergy by means of con-

ferences and the establishment of seminaries. St. Vincent prudently gave his rule no final shape until after many years of experience, in 1658. In his own lifetime missionaries had been sent to Italy in 1638, Tunis in 1643, Algiers, Ireland, and the Hebrides in 1646, and Madagascar in 1648; and at his death, in 1660, the congregation numbered 500 members. The first house in Spain was founded by a colony from Rome in 1704; the Spanish Lazarists kept persistently at their work, in spite of difficulties with liberal and revolutionary governments, and now possess 16 houses. The French congregation also suffered severely from the Revolution, but was restored in 1804, receiving 15,000 francs from the public exchequer and a hospital in Paris. Napoleon, however, abolished them once more in 1809 and confiscated their property, which was restored by Louis XVIII in 1816; they subsequently possessed 56 houses in France. They were invited to Germany in 1781 by the Elector Palatine Charles Theodore, who intrusted to them some institutions which had been conducted by the Jesuits before their suppression. They began work in Prussia in 1850 and had already eight houses when they were driven out by the Kulturkampf of 1873. They maintained a mission in Madagascar from 1648 to 1825. In China they have had a long and notable career from 1697 to the present day, and several of them have filled the office of Vicar Apostolic. They have missions in Algiers, Egypt, Turkey, Persia, and other countries. The first Lazarist to work in North America came here in 1816 under the leadership of Dubourg, the future Bishop of New Orleans; the order in the United States is now divided into two provinces, with over a dozen houses and more than 200 priests. The total number of Lazarists in all parts of the world is over 32,000. See VINCENT DE PAUL, SAINT, and consult the works mentioned there. Consult also: *Annals de la congrégation de la mission* (55 vols., Paris, 1834 to the present; an Eng. ed., 1894 et seq.); *Mémoires de la congrégation de la mission* (9 vols., ib., 1863); *Recueil des principales circulaires des supérieurs généraux de la congrégation de la mission* (9 vols., ib., 1863); L. V. de Bougaud, *Histoire de Saint Vincent de Paul, fondateur de la congrégation des prêtres de la Madagascar au 17e siècle* (ib., 1903). A complete bibliography is in the *Annals*, No. 40 (Emmitsburg, Md., 1903).

LAZARUS (Gk. *Adāpos*, *Lazaros*, the Græcized form of the Rabbinic *L'āzār*, a shortened form of the Heb. *El'āzār*, God has helped). 1. The name given by Jesus to the beggar in the parable (Luke xvi. 19-31). This is the only instance in which Jesus has named a character in His parables. The conclusion that it has been introduced by a later hand, in order to connect the individual with the Lazarus of Bethany, is not as probable as that, some name being necessitated by the situation of verse 24, it was used by Jesus himself, being selected because of its meaning. The unsupported idea that he was a leper has given rise to the terms "lazar," a leper, "lazar house" (lazaretto), a pesthouse. 2. The brother of Martha and Mary (q.v.) and a beloved friend of Jesus. He is named only in John xi and xii. The literal truth of the story of the resurrection of Lazarus there given has been seriously questioned in many quarters. A number of attempts have been made to explain it so as to preserve its

lofty teaching and at the same time eliminate the miracle. The name Lazarus is apparently preserved in *El-Azariyeh*, a village southeast of the Mount of Olives, about $1\frac{1}{4}$ miles from Jerusalem, which is generally identified with the ancient Bethany. Consult the lives of Christ by Strauss, Renan, Weiss, Edersheim, O. Holtzmann, and Rhee for various views. For the prominent place given to the resurrection of Lazarus in early Christian art, consult Smith and Cheetham, *Dictionary of Christian Antiquities*, vol. i (London, 1875-80), and C. D. Lambertson, *Themes from St. John's Gospel in Early Roman Catacomb Painting* (Princeton, N. J., 1911).

LAZARUS, EMMA (1849-87). An American Jewish poetess and philanthropist, born in New York City and privately educated. She was attracted in youth to poetry and published a volume of poems and translations at the age of 18. *Admetus and Other Poems* followed in 1871 and showed ripening talent, but her first mature work is *Alide*, a prose romance, based on an episode in Goethe's life (1874). *The Spagnoletto*, a tragedy (1876), was much praised. *Poems and Ballads of Heine* followed in 1881 and her original poems, *Songs of a Semite*, in 1882. When the Jews, expelled in great numbers from Russia, began to appear in destitute multitudes in New York in the winter of 1882, Miss Lazarus interested herself actively in providing technical education to make them self-supporting. She wrote also: *In Exile* (1882); *The Crowing of the Red Cock*; *The Banner of the Jew* (1882). A collection of *Poems in Prose* (1887) was her last book. Several of her translations from mediæval Hebrew writers have found a place in the ritual of American synagogues. Her *Complete Poems* with a *Memoir* appeared in 1888 at Boston.

LAZARUS, LA'TSÁ-RUS, MORITZ (1824-1903). A German philosopher and psychologist. He was born at Filehne in Posen, of Jewish parents, and studied law and philosophy in Berlin. In 1850 he became prominently connected with philosophical thought by Steinthal the *Zeitschrift für Vergleichende Sprachwissenschaft* and became a leader in the modern Herbartian school. In 1860 he was chosen professor at Bern, in 1868 he became teacher of philosophy at the Berlin Military Academy, and in 1873 was made professor at the University of Berlin. Lazarus' fundamental principle was that truth must be sought by psychological methods directed rather towards society as a whole than towards individuals. His more important works are *Das Leben der Seele* (2 vols., 1856-57; 3d ed., 1883-97); *Zur Lehre von den Sinnestauschungen* (1867); *Ueber den Ursprung der Sitten* (2d ed., 1867); *Ueber die Ideen in der Geschichte* (2d ed., 1872); *Was heisst nationale* (1880); *Erziehung und Geschichte* (1881); *Unser Standpunkt* (1881); *Ueber die Reize des Spiels* (1883); *Ideale Fragen* (3d ed., 1885). *Der Prophet Jeremias* (1894). *Die Ethik des Judentums* (1898; new ed., 1911); *Die Erneuerung des Judentums* (1909). *Moritz Lazarus' Lebens-erinnerungen*, completed by N. Lazarus and A. Leicht, appeared in 1906.

LAZES, LA'ZĒZ. A branch of the Mingrelian section of the Georgian (q.v.) stock, dwelling in the Caucasus in the Batum-Trebizond region, chiefly in Turkish territory. By some they are considered to be the descendants of the ancient

Colchians. The Lazian language, which is spoken in several dialects, was studied by Rosen, who published an essay, *Ueber die Sprache der Lazen* (Berlin, 1843).

LAZETCHNIKOV, LA-ZĒCH'NYĒ-KÓF, IVAN IVANOVITCH (1794-1869). A Russian novelist and dramatist. His first success was his sketch of military life published after his retirement from the army in 1819. His dramas did not meet with the success gained by his historical novels, among which the most important are: *Posledni Novik* (1833); *Ledianyi Dom*, translated into German with the title *Eispalast* (1835); *Basurman* (1838). His complete works were published at St. Petersburg in 1858.

LAZULI BUNTING (so called from its blue color), or **LAZULI FINCH**. A small finch (*Cyanospiza*, or *Passerina, amoena*) of the western United States, where it replaces the indigo bunting (q.v.) of the East, which it closely resembles in habits and song. It is frequently kept as a cage bird. The male has the head and upper parts a deep turquoise blue, with two white bars upon the wings, the breast is yellowish tawny, the abdomen white. The female is grayish brown.

LAZULITE (from *lazuli*). An aluminium phosphate with iron and magnesium hydroxides that crystallizes in the monoclinic system. It is of an azure-blue color, resembling lapis lazuli, with which it has been frequently confounded. This mineral is found both massive and crystallized in Styria, Switzerland, Sweden, and Brazil, and in the United States in Gaston Co., N. C., and in Lincoln Co., Ga.

LAZURITE. See LAPIS LAZULI.

LAZZARONI, LA'DZÁ-RÓ-NÉ (It, beggars). The name by which the lowest class of the population, that spends most of its time in idling or begging, is designated in Naples. They became prominent during the Revolutionary and Napoleonic era, when, as supporters of the Bourbons, they attacked with great ruthlessness the wealthy middle class and liberal nobility.

LEA, HENRY CHARLES (1825-1909). An American ecclesiastical historian, son of Isaac Lea, grandson of Mathew Carey, and named for his uncle, Henry Charles Carey (q.v.). His brother, Mathew Carey Lea (1823-98), was known as a chemist, and made especially important contributions to photographic chemistry. H. C. Lea was born in Philadelphia, was educated privately, and at 18 became identified with his father's publishing business. Ill health forced his retirement in 1880, but he acquired large real estate interests and became a millionaire. For many years he was active in municipal reform, and during the critical period of the Civil War he did much to promote the organization of volunteers in Philadelphia. Lea had taken up the study of the mediæval church as an avocation, but in later years, while he continued his interest in various activities, he devoted himself increasingly to work which eventually placed him in the front rank of modern historians. He used his wealth to employ expert copyists, who duplicated for him documents, especially such as dealt with the Inquisition in Spain and the Spanish dependencies—his great field of work. His collection of books and manuscripts, the finest of its kind in existence, he bequeathed to the University of Pennsylvania. Lea was a member of the American Academy of Arts and Letters and a fellow of the British Academy; in 1909 served as presi-

dent of the American Historical Association; received honorary degrees from Harvard, Princeton, Pennsylvania, and Giessen; and was made a fellow of the Imperial University of Moscow. His works include: *Superstition and Force* (1866; 4th ed., rev., 1892); *A History of Sacerdotal Celibacy in the Christian Church* (1867; 3d ed., 2 vols., 1907); *A History of the Inquisition of the Middle Ages* (1888; new ed., 3 vols., 1906; Fr. trans. by Solomon Reinach, 1899; Ger. trans., 1905-06); *A History of Auricular Confession and Indulgences in the Latin Church* (3 vols., 1896); *The Moriscos of Spain* (1901); *History of the Inquisition of Spain* (4 vols., 1906-07); *The Inquisition in the Spanish Dependencies* (1908). Consult P. M. Baumgarten, *Henry Charles Lea's Historical Writings* (New York, 1909); E. P. Cheyney, "On the Life and Works of Henry Charles Lea," in *American Philosophical Society Proceedings* (Philadelphia, Jan.-Apr., 1911).

LEA, HOMER (1876-1912). An American soldier and writer, born in Denver. In spite of a deformity of the spine he obtained a good education, studying at Occidental College, at the University of the Pacific, and at Stanford. Interested in military science, he told his friends that he would become a general in the Chinese army. He first attracted attention by championing the cause of the Chinese in 1900 and by attempting the relief of Emperor Kwang-sü (q.v.) in 1901. In 1904 he became lieutenant general in the new Chinese army, traveled with the Chinese reformer K'ang Yu-wei (q.v.) in 1905, and was associated with Dr. Sun Yat-sen (q.v.) in the early stages of the Chinese revolution of 1911-12. He gained international prominence by his book *The Valor of Ignorance* (2 vols., 1909), in which he attempted to show how the Japanese could successfully invade the United States. He wrote also a novel *The Vermillion Pencil* (1908), a drama *The Crimson Spider* (1909), and *The Day of the Saxon* (1912).

LEA, ISAAC (1792-1886). An American conchologist, born at Wilmington, Del. He was a business man, a partner of a large publishing house in Philadelphia, who devoted his leisure to the collection and study of objects of natural history. He was especially interested in freshwater and land mollusks and during 50 years continued to make contributions to the transactions of the scientific societies of Philadelphia concerning these animals. He was president of the American Association for the Advancement of Science in 1860. His most important writings are: *Observations on the Genus Unio* (13 vols., 1827-74); *Contributions to Geology* (1833); *Synopsis of the Family of Naiades* (1838); *Fossil Footmarks in the Red Sandstones of Pottsville* (1852). G. W. Tryon, Jr., published a full account of Lea's conchological work in Philadelphia in 1861. His immense collection of Unionids and his other collections are deposited in the National Museum at Washington. Consult N. P. Scudder, "Published Writings of Isaac Lea," in *United States National Museum, Bulletin No. 23* (Washington, 1885).

LEA, LUKE (1879-). An American legislator and journalist, born at Nashville, Tenn. He graduated from the University of the South (A.B., 1899; A.M., 1900) and from Columbia Law School in 1903. He began practice in his native city, and, being a capable lawyer and a member of a distinguished Tennessee fam-

ily, he was successful. His prominence was secured in journalism rather than the law, however. In 1905 he became the editor and publisher of the Nashville *Tennessean*, with which, in 1913, he joined the Nashville *Democrat*. In politics he was the ardent supporter of Senator Carmack and the opponent of Governor Patterson. When Carmack was killed by the Coopers, he was then and during the subsequent sensational trial caustic in his criticism of father and son. He was a leader in the revolt of the Fusion Democrats against the Patterson administration and candidacy for renomination. In 1911, after prolonged balloting, Lea was elected United States Senator by the Legislature to succeed Senator Frazier. As a Senator, Lea acted with the regular Democrats and, although extremely young, was regarded as very able. He introduced the resolution providing for the second investigation of the election of Senator Lorimer. He was also an enthusiastic and consistent supporter of President Wilson.

LEA, MATHEW CAREY (1823-97). An American chemist, born in Philadelphia. He devoted himself chiefly to the chemistry of photography, to which he made a number of important contributions. His publications include numerous papers on the chemical action of light and an excellent *Manual of Photography* (2d ed., 1871).

LEACH, ARTHUR FRANCIS (1851-). An English educational historian, born in London and educated at Winchester and at New College, Oxford, where he graduated in 1873. Until 1881 he was fellow of All Souls College, also being called to the bar in 1874. In 1882 he became Assistant Charity Commissioner and in 1906 Charity Commissioner. He made valuable contributions to the history of English education, especially at the Reformation period—his *English Schools at the Reformation, 1546-48* (1896), by an accumulation of evidence, disproved the claims so often made for Edward VI as the founder of schools, and furnished an entirely new view of education in England before the Reformation. This work has in a measure been supplemented by the publication of *Educational Charters and Documents* (1910). Leach contributed considerably on the history of schools to the *Victoria County Histories*. Other publications include: *History of Winchester College* (1880); *History of Bradfield College* (1900); *Early Yorkshire Schools* (1899, 1903); *History of Warwick School* (1904).

LEACH, WILLIAM ELFORD (1790-1836). An English naturalist, born at Plymouth. He studied medicine at St. Bartholomew's Hospital, London, and in the medical department of Edinburgh University, from which he graduated in 1812. He became interested in zoölogy, however, and in 1813 accepted a position in the British Museum, where he devoted much time to developing the natural system of arrangement (advocated by Cuvier and Latreille) in conchology and entomology. In 1815 he published the beginning of a work on British crustacea which he never finished. He was appointed assistant curator of the natural history department of the museum in 1821, but was obliged to relinquish active work in the same year because of brain trouble induced by overwork. He spent most of his remaining years in Italy and died of cholera, near Tortona. Among his most important works are: *The Zoölogical Miscellany* (3 vols., 1814-17); *Systematic Catalogue of the Specimens of the Indigenous Mammalia and Birds that are*

Preserved in the British Museum (1816); *A Synopsis of the Mollusca of Great Britain*, published posthumously in 1852. He contributed numerous papers to various scientific journals.

LEACOCK, HAMBLE JAMES (1795-1856). An African missionary. He was born in Barbados, where his father was a slaveholder. He became a clergyman and gave the privileges of the Church to all slaves of his parish, at the same time freeing his own slaves. Difficulty with the Bishop, insurrection of the slaves, depreciation in the value of property occurring, he removed to the United States, where he was settled in Kentucky, Tennessee, and New Jersey. In 1855 he sailed for Africa as a missionary of the West Indian Church Association and founded a station at Rio Pongas, Sierra Leone. Consult Henry Caswall, *The Martyr of the Pongas* (New York, 1857).

LEACOCK, STEPHEN BUTLER (1869-). A Canadian writer and educator, born at Swamoor, Hants, England, and educated at Upper Canada College, the University of Toronto, and the University of Chicago, where he took the degree of Ph.D. From 1891 to 1903 he was on the faculty successively of Upper Canada College, the University of Chicago, and McGill University. A lectureship of the Cecil Rhodes Trust led him to make a tour of the Empire in 1907-08, in the course of which he lectured on imperial organization. His writings, first of a serious character and later in lighter vein, include notably: *Elements of Political Science* (1906); *Baldwin, Lafontaine, Hincks*, in the "Makers of Canada Series" (1907); *Literary Lapses* (1910), an entertaining little book which grew slowly to a considerable popularity; *Nonsense Novels* (1911); *Sunshine Sketches of a Little Town* (1912); *Behind the Beyond* (1913); *Arcadian Adventures with the Idle Rich and Methods of Mr. Sellyer: A Book Store Study* (both 1914).

LEAD, *léd*. A city in Lawrence Co., S. Dak., 4 miles southwest of the county seat, Deadwood, on the Chicago, Burlington, and Quincy, and the Chicago and Northwestern railroads (Map: South Dakota, A 3). It has a hospital, the Hearst Free Kindergarten and Recreation Building, and the Hearst Free Library. The city is in the noted Black Hills mining region and has extensive gold mining and commercial interests. Pop., 1900, 6210, 1910, 8392; 1914 (U. S. est.), 9321.

LEAD (AS. *léd*, Dutch *lood*, MHG *lēt*, Ger. *Lot*; connected with OIr. *luaid*, lead). One of the well-known metallic chemical elements. It is mentioned in the Book of Numbers, as part of the spoils taken from the Midianites, and also in the Book of Job. Pliny gave the name of *plumbum nigrum* to lead, while tin he called *plumbum candidum*. Among the alchemists lead was designated by the character which is supposed to represent the scythe of Saturn. It is found native in small quantities, merely as a mineralogical curiosity. Its compounds found in nature include the sulphide, the carbonate, the sulphate, the chlorophosphate, a chloroarsenate, as well as numerous compounds with rare elements, such as chromium, selenium, tellurium, vanadium, etc.

Lead Ores. The principal ore of lead is galena (PbS), which contains 86.6 per cent of metal. The sulphate (anglesite), the carbonate (cerussite), and the chlorophosphate (pyromorphite) are occasionally found in sufficient quantities to warrant exploitation; while the chloro-

arsenate, chromate, chlorovanadate, molybdate, oxide, and other compounds have little metallurgical importance. Galena nearly always contains some silver and usually a little arsenic, antimony, copper, zinc, and gold. Galena is widely disseminated, although it rarely occurs in large deposits. Along the Atlantic border of the United States there are numerous localities where it is found in veins that cut through the Archean and Paleozoic rocks, the gangue material being quartz or calcite. These deposits have not been worked, however, for many years. One of the most productive mining regions is in southeastern Missouri. The ore is disseminated in limestone through a thickness of about 200 feet, and it has been taken out in enormous quantities from the workings at Mine La Motte, Doe Run, and Bonne Terre. Galena, associated with zinc blende, is found in Illinois, Wisconsin, and Iowa in proximity to the Mississippi River, and also in southwestern Missouri in Jasper and Newton counties, and across the Kansas border in Cherokee County. The argentiferous lead ores of the Rocky Mountain States are found in carboniferous limestone, they yield hard and soft ores containing cerussite and silver chloride. In the deeper workings the oxidized ores give way to unchanged sulphides, which are now of predominant importance. Lead-silver mines are operated at several localities in Idaho, Colorado, and Utah. Large quantities of lead in crude form are imported into the United States from Mexico and British Columbia and refined by Western smelters.

Metallurgy. Numerous minerals contain lead, but only three occur in sufficient quantities to constitute lead ores, viz., the sulphide, galena, PbS (Pb, 86.6 per cent); the carbonate, cerussite, PbCO₃ (Pb, 77.5 per cent); and the sulphate, anglesite, PbSO₄ (Pb, 68.3 per cent). Galena, the most important of these ores, is classed as argentiferous or nonargentiferous, depending upon the amount of silver present. The nonargentiferous lead ores of the United States occur chiefly in the Mississippi valley, which contributes more than one-third of the total amount of lead produced from domestic ores. Since the beginning of the present century, however, it has been found profitable to desilverize some of the lead produced from ores which were formerly classed as nonargentiferous. In recent years at least one-half of the silver and one-tenth of the gold annually produced in the United States have been obtained from lead smelting, either by the treatment of lead ores alone, or by adding silver and gold ores to the charge in the lead furnace, the reduced metallic lead serving to collect the precious metals.

There are three processes used for smelting lead sulphide ore: roasting and reaction, roasting and carbon reduction, and iron precipitation, all producing crude lead which requires subsequent refining to yield a commercial product. The carbonate and sulphate ores are generally added to the charge of roasted sulphide ores prior to the reduction by carbon.

The Roasting and Reaction Process.—This process, called also "air reduction," consists in roasting galena at a comparatively low temperature in order to transform a large part of the lead sulphide into sulphate and oxide, whereupon, by raising the temperature, these compounds are caused to react upon one another, yielding molten lead which separates from the charge, and a residue of rich slag which

is subsequently treated in a special furnace for the recovery of its metallic contents. In Europe the operations are conducted in a small reverberatory furnace, while in the United States a small low furnace, called a "Scottish hearth," is used.

The Roasting and Reduction Process.—In this process, which contributes at least three-quarters of the annual output of lead in the United States, the sulphide ore is first roasted in reverberatory furnaces, which are usually operated mechanically, or in a special form of converter, or "pot," which partially roasts and sinters the ore mixture with the aid of an air blast. Lately an improved form of sintering machine, developed by Dwight and Lloyd, has been extensively used. This is radically different from all other sintering devices, furnishing a continuous discharge of porous and coherent material from a slowly revolving drum upon which the reactions proceed through successive portions of a thin layer of ore. The agglomerated roasted ore, generally with additions of oxidized lead ores, gold ores, or silver ores, is then smelted in blast furnaces, alternate layers of ore and flux, and fuel (charcoal or coke) being charged at the top, and a blast of cold air being introduced at the bottom of the furnace. The products of this operation are metallic lead, lead matte, slag, and sometimes speiss. The molten crude lead is ladled from the forehearth of the furnace and cast into elongated pigs of crude metal, called "base bullion." The slag flows from the furnace continuously and is removed by large slag pots to the dump. The matte, consisting essentially of lead, iron, copper, and sulphur, and the speiss, which is chiefly iron, lead, sulphur, and arsenic, are subjected to special treatment for the recovery of the lead, copper, and precious metals contained.

The Iron Reduction Process.—This process comprises smelting raw or partly roasted galena in a shaft or a reverberatory furnace and adding metallic iron in order to form a lead matte, which is subsequently roasted and smelted for its lead content. The process is rarely used alone, but metallic iron is frequently used in other processes to aid in the decomposition of the lead sulphide present.

Refining.—The crude lead produced by the processes above described is more or less impure, from the presence of copper, arsenic, antimony, zinc, iron, bismuth, tin, sulphur, and the precious metals, gold and silver. When the crude metal does not contain sufficient silver to warrant special treatment, it is refined by blowing steam through the molten metal contained in an iron kettle or by slow melting with free access of air in a reverberatory furnace. The steam oxidizes the impurities which collect on the surface and are skimmed off, leaving the refined lead to be cast into pigs for commerce, each weighing from 80 to 110 pounds. When the crude metal contains an appreciable quantity of silver (base bullion), with or without a small proportion of gold, it is generally desilverized and refined by a special treatment with zinc or by the electrolytic process. The former method, known as the Parkes Process, is based upon the very limited miscibility of lead and zinc and the tendency of silver (and gold) to collect in the upper, zinc-rich layer. In practice, about 2 per cent of metallic zinc is added to a kettle containing up to 50 tons, or more, of molten crude lead. The temperature is raised

to the melting point of zinc (about 420° C.) and the latter thoroughly incorporated by agitation with steam or with mechanical devices. On cooling, the zinc, being less fusible and of a lower density, solidifies and rises to the surface as a crust, carrying with it the precious metal. This crust, carrying some lead, is removed and subsequently treated for its zinc, silver, and gold contents. (See under SILVER, METALLURGY OF.) The desilverized lead remaining in the kettle is further refined by oxidation with steam, or by an oxidizing fusion in the reverberatory furnace, until of sufficient purity for the market. The lead finally produced contains but a few hundredths of 1 per cent of impurities.

Base bullion may also be refined electrolytically by suspending in multiple flat plates of the crude metal (anodes) together with thin plates of pure lead (cathodes) in a tank containing an electrolyte of lead fluosilicate, through which a current of electricity is passed.

Production. The total production of lead in the world during 1913 was estimated at 1,270,458 short tons; of this quantity the United States contributed 411,878 tons (domestic refined); Spain, 223,767 tons; Germany, 199,627 tons; Australasia, 127,867 tons, and Mexico, 68,343 tons. The production of primary lead in the United States during 1913 is divided as follows: Idaho, 137,802; Missouri, 152,430, Colorado, 42,840; Utah, 71,069, making with the production of other States, a total of 436,430 short tons, in addition to 50,582 tons smelted or refined which was derived from foreign ore and base bullion, a smaller quantity than usual on account of the curtailment of the Mexican output. About one-third is consumed for the manufacture of pipe, one-fifth for making shot, the rest for sheet lead, alloys, etc.

Bibliography. For the occurrence of lead ores consult Kemp, *Ore Deposits of the United States and Canada* (New York, 1900), and Ries, *Economic Geology* (3d ed, New York, 1910), while for a concise description of the metallurgy of lead, consult Schnabel, *Handbook of Metallurgy* (London, 1905); Hofman, *Metallurgy of Lead* (New York, 1904); Collins, *Metallurgy of Lead* (London, 1910).

Properties of Lead. Metallic lead (symbol, Pb; atomic weight, 207.1) is a bluish-gray lustrous metal that is exceedingly malleable and ductile and has a specific gravity of about 11.4. It melts at 327° C. (621° F.) and boils at from 1450° to 1600° C. It is very soft, being easily cut by a knife and scratched by the nail, and it leaves a black streak on white paper. The grade of commercial lead is often approximated by applying these simple tests. It is an inferior conductor of both heat and electricity. Metallic lead is extensively used for water pipes but since lead is somewhat soluble in water, it is particularly desirable that caution should be taken to draw off water that has been standing in pipes before using, especially when required for drinking. Special tin-lined pipe is made to overcome this danger of lead poisoning. Owing to the fact that lead resists the action of acids, it has been extensively used in the construction of lead chambers in the manufacture of various acids, especially sulphuric. It is also employed in the manufacture of shot. The alloys of lead with other metals have been sufficiently described under ALLOY.

Compounds of Lead. The two most important among the compounds of lead with oxygen

are litharge and minium. *Litharge* is obtained when molten lead is heated at a moderate temperature in the air with constant stirring. It is used in the arts in the manufacture of flint glass, as a glaze for earthenware, for the preparation of lead salts, as a paint, and for drying oils. *Minium*, which has been known since the time of Pliny, is a scarlet crystalline granular powder, usually prepared by carefully heating very finely divided pure litharge or white lead. It finds extensive use in the arts as a pigment, also in the manufacture of flint glass, as a cement for making steam-tight joints, and in the manufacture of secondary batteries. (See MINIMUM.) Lead combines with carbon dioxide to form the carbonate, which is found native as cerussite (q.v.). *White lead*, or basic carbonate of lead, $\text{Pb}(\text{OH})_2\text{PbCO}_3$, is a white heavy powder. It is extensively used in the arts as a pigment and as a body for other colors in the manufacture of paints. It is produced artificially by the decomposition of basic acetates of lead by means of carbon dioxide. (See PAINTS.) *Lead acetate*, or sugar of lead, $\text{Pb}(\text{C}_2\text{H}_3\text{O}_2)_2 \cdot 3\text{H}_2\text{O}$, is made by adding lead oxide to acetic acid and gently heating the mixture. It is used in medicine, in the arts, as a clarifying agent in the refining of sugar, and to a certain extent in chemical analysis. *Lead sulphate*, which is found native as anglesite, may be obtained artificially by precipitating a lead salt with sulphuric acid, yielding a heavy white powder which is sometimes used as a substitute for white lead. The various lead chromates are colored yellow; they are used as pigments and in calico printing.

Medicinal Uses of Lead Compounds. A number of lead compounds are employed in medicine as astringents and sedatives. Most of them are thus applied externally for weeping eczema and ulcerations. The acetate is given internally as a remedy for diarrhœa in typhoid fever, for gastric ulcer, for intestinal hemorrhage, etc. The astringent action for which principally lead compounds are used, both externally and internally, is very powerful. Combined with laudanum (q.v.) in the form of lead and opium wash, lead is an excellent sedative for sprains, etc. While lead compounds have no effect on the healthy unbroken skin, they speedily form a coating of coagulated albumin on sores and ulcers, and cause coagulation of albumin in the tissues and contraction of the small vessels. For their excellent sedative effects, lead salts are used in pruritus. Ordinary "lead water" contains lead in the form of *subacetate*. *Lead carbonate* (basic) is a 10 per cent constituent of the official "ointment of lead carbonate." *Lead iodide* is a 10 per cent constituent of the ointment bearing its name. *Lead oleate* is contained in ordinary lead plaster and in the "Diachylon ointment" which is made from it.

Lead Poisoning. Acute poisoning, which is but seldom met with, is due to the irritant action of lead salts on the alimentary canal. The treatment consists in administering an emetic (e.g., 20 grains of zinc sulphate), washing out the stomach, and then giving a dose of Epsom salt. Much more common and important is the chronic form of lead poisoning. Chronic lead poisoning may be due to drinking water that has passed through new lead pipes (in course of time, a deposit of insoluble salts forms on the inner walls of pipes, and thus the danger of lead being dissolved in the water is considerably dimin-

ished), or water that has been kept for some time in lead cisterns. The amount of lead that may thus be dissolved depends much on the quality of the water. Considerable amounts are dissolved if the lead is exposed alternately to the action of air and of water. Another source of chronic lead poisoning is in the often uncleanly habits of painters, plumbers, and workmen engaged in the manufacture of lead compounds. Absorbed for the most part by the kidneys, lead may cause pronounced symptoms of anæmia, gout, chronic inflammation of the kidneys, chronic inflammation of the peripheral nerves, muscular paralysis, and more rarely certain forms of epilepsy and insanity. A well-known symptom consists in the formation of a characteristic dark-blue line on the gums, due to the precipitation of black sulphide of lead, the sulphur coming from the food or from tartar on the teeth. Another common symptom is known as "painter's colic." The treatment of chronic lead poisoning consists in the administration of opium, cathartics, sour lemonade, soluble sulphates (Glauber's salt or Epsom salt), and potassium iodide. Care must be taken to remove the cause and thus prevent further poisoning.

Thomas Oliver, *Diseases of Occupation from the Legislative, Social, and Medical Points of View* (New York, 1908); id., *Industrial Lead Poisoning, with Descriptions of Lead Processes in Certain Industries, in Great Britain and the Western States of Europe* (Washington, 1911); Legge and Goadby, *Lead Poisoning and Lead Absorption* (London, 1912); W. G. Thompson, *The Occupational Diseases* (New York, 1914) See also OCCUPATIONAL DISEASES.

LEAD, SOUNDING. A device for obtaining soundings. It almost invariably consists of a lead bar of nearly cylindrical or prismatic shape, in length five or six times its diameter, having a cup-shaped recess in the larger (which is the lower) end and a hole for the lead line in the other. The recess in the bottom of a lead is for the *arming*, which usually consists of tallow; this strikes the bottom when the lead is cast, and some sand or mud (or whatever the bottom is composed of) adheres to the arming and may be examined. If the bottom is clean and rocky, this may also be determined by the effect on the arming. Sounding leads are of different sizes, *hand leads* weigh from 5 to 14 pounds, *coasting leads* from 25 to 50 pounds, and *deep-sea* (pronounced *dipsy*) *leads* from 75 to 120 pounds. For soundings greater than 20 fathoms, sounding machines are now chiefly used. See SOUND, SOUNDING.

Lead Line. The lead lines are made of white line, wetted and carefully stretched before marking and frequently examined and measured to see that they have not stretched or shrunk. The marking on hand lead lines is as follows: at 1 fathom, a toggle or piece of leather; at 2 fathoms, two strips of leather; at 3 fathoms, three strips of leather; at 5 fathoms, a white rag; at 7 fathoms, a red rag; at 10 fathoms, a piece of leather with a hole in it; at 13, a blue rag; at 15 and 17 fathoms, the same as at 5 and 7; at 20 fathoms, 2 knots. The other fathoms are not marked and are called *deeps*, the lead line being said to be divided into *marks* and *deeps*. For hydrographic work, hand lead lines are marked at every fathom, the *deeps* being shown by a small rag at 8, 9, 16, 18, and 19 fathoms; at 4 fathoms a piece of leather with

4 tails, and at 11 and 12 the same as 1 and 2 (omitting the toggle). In addition every foot up to 5 fathoms is shown by a very small piece of white rag worked into the lay of the rope and every half fathom by a piece of twine. Deep-sea lead lines are marked at 20 fathoms with a piece of twine having two knots, at 30, with three knots; at 40, with four knots, and so on; while at every intermediate 5 fathoms there is a small piece of twine with one knot.

LEAD, or **LEADE**, lēd, MRS. JANE (WARD) (1623-1704). An English mystic. She was born in the County of Norfolk. While still a girl, she began to hear miraculous voices. In 1654 she married a relative, William Lead, who died in 1670, and thenceforth Mrs. Lead lived quietly in London. Influenced by the writings of Jakob Böhme (q.v.), which had appeared in English, she began, in 1670, to have visions. These she recorded in successive volumes. One of them, in 1693, fell into the hands of Fischer of Rotterdam and was translated by him into Dutch. Other volumes and translations followed, and Mrs. Lead became a recognized leader among the mystics of England, Holland, and Germany. Her followers called themselves The Philadelphia Society and believed her to be a true prophet. About 1693 she made the acquaintance of Francis Lee, a young Oxford scholar (because of his Oriental learning called Rabbi Lee), who became her amanuensis and adopted son and married her daughter. She died in an almshouse at Stepney, London, Aug. 19, 1704. Her writings number 16 titles and were once popular, but now are scarce. A few have been lithographed in the *Manuscript Library* (Glasgow, 1884 et seq.), e.g., *The Heavenly Cloud Now Breaking: The Lord Christ's Ascension Ladder Sent Down* (1681), treating of death and resurrection; *The Revelation of Revelations* (1683), recounting her visions; *The Wonders of God's Creation Manifested in the Variety of Eight Worlds, as they Were Made Known Experimentally unto the Author* (1695).

LEAD CHROMATE. See CHROMIUM.

LEADENHALL MARKET. A great London market for the sale of poultry, game, and hides. Its name is derived from the lead-roofed manor of Sir Hugh Neville which anciently occupied the site.

LEADENHALL STREET. A well-known London street, the continuation of Cornhill. On it formerly stood the East India House, removed in 1862.

LEADER. The name given to the performer in an orchestra who plays the principal first violin. He is called concert master. It is his duty to attend to a uniform bowing of the violins, as it would look awkward if some performers used the up stroke, while others used the down stroke. Upon him devolves the duty of playing all solo passages called for in any orchestral work, and he is supposed to be able to take the conductor's place in case of emergency. In small orchestras the leader is generally also the conductor (q.v.) and uses his bow as a baton in passages that offer rhythmic difficulties.

LEADER, BENJAMIN W. (1831-). An English landscape painter. He was born in Worcester and studied at the Worcester School of Design and at the Royal Academy schools in London. He speedily gained popularity and was made a Royal Academician in 1864. His work, which revived the traditions of the great English landscape painters, is ably composed and

possesses a strong lyric note. Leader painted chiefly landscapes of western Britain. Among the best are: "The Valley of the Llugwy" (1833, Tate Gallery, London); "Tintern Abbey in . . ."; "A Quiet Valley among Welsh . . ."; "360, Worcester Gallery"; "In the Evening it Shall Be Light"; "The Weald of Surrey" (1901). He received a gold medal at the Paris Exposition in 1889, the cross of the Legion of Honor, and a medal at Chicago in 1893. Consult Lewis Lusk, "Life and Work of Benjamin W. Leader," in *Art Annual* (London, December, 1901).

LEAD GLANCE. See GALENA.

LEADING OF VOICES. A term applied to the progression of the individual parts or voices in a musical composition, whether vocal or instrumental. What constitutes good or bad writing depends chiefly upon the skill with which the various voices are led. The fundamental principle of securing a masterly leading of the voices is the progression by seconds or steps, whether they be whole or half steps, diatonic or chromatic. Another important principle is the retention in the same part of the same note if it is common to two or more chords. The leading of the bass, however, is an exception to these rules, since the tendency of the bass part is to proceed from the fundamental tone of one chord to the fundamental of the next. Although progression by steps is generally desirable, it is not always practicable in modern music. This is especially true in the case of the (generally highest) part having the melody, which frequently proceeds in harmonic skips. The leading of the voices is far more free in modern music than it was formerly, and hence a distinction is made between *strict* and *free* style. The former avoids in the progression of voices all difficult intervals (augmented second, fourth), whereas the latter admits such intervals under certain circumstances. Again, there is greater freedom in the progression of voices in instrumental compositions than in vocal, because pure intonation of difficult intervals is more easily attained by means of an instrument than by the human voice. In the leading of voices it is also of great importance whether a voice or part is *real* or only *reinforcing*. See HARMONY.

LEADING STAR. See LODESTAR.

LEADING TONE OR NOTE. In music, the major seventh of the diatonic scale, or the semitone below the octave, to which it leads. The resolution of this note in a chord is always a semistep above. Hence it can never be doubled, as open octaves would result in the progression to the next chord. See HARMONY.

LEAD POISONING. See LEAD; OCCUPATIONAL DISEASES.

LEADS, lēdz, THE (It. *I Piombi*). The prison cells under the leaden roof of the Doges' Palace at Venice. These cells were destroyed in 1797.

LEADVILLE, lēd'vil. A city and the county seat of Lake Co., Colo., 78 miles in a direct line southwest of Denver, on the Colorado Midland, the Denver and Rio Grande, and the Colorado and Southern railroads (Map: Colorado, C 2). The surrounding scenery offers magnificent attractions; and the city itself, at an elevation of 10,200 feet, affords much of unusual and striking interest. There are large sampling, refining, and reduction works, and smelting furnaces; also a handsome theatre, the Elks Opera House, hospitals, a Federal building, and a United

States fish hatchery. Leadville was incorporated as a town in 1877 and as a city in 1878. Pop., 1900, 12,455; 1910, 7508.

Settled in 1860, that locality, known then as California Gulch, post-office town, Oro, soon became prominent as the centre of an active gold-mining industry. The apparent exhaustion of the gold deposits during the following decades, however, gave a serious setback to its progress. After large bodies of lead-silver ores had been opened in California Gulch, from $\frac{1}{2}$ mile to 4 miles distant, the town boomed, the population increasing from about 300 in 1877 to at least 6000 in the following year and to 35,000 in 1879. Other rich silver deposits were soon found on Carbonate, Iron, and Fryer hills, and the mineral output for Leadville during the period 1879-1905 reached \$328,487,146. Further prospecting has been rewarded by the discovery of rich ores within the city itself. For some time the region about Leadville held first place in the United States in the production of lead and silver.

LEAF (AS. *leaf*, Goth. *laufs*, OHG. *laub*, Ger. *Laub*, leaf). A lateral, usually green outgrowth from the stem of a plant. The most conspicuous form is the foliage leaf, i.e., one which contains green tissue and is prominently concerned in food manufacture. (See PHOTOSYNTHESIS.) Very simple expansions of green tissue, which are commonly called leaves, occur among the *algæ*, especially the more complex marine forms, and in the case of the leafy liverworts and the mosses. But the highly organized foliage leaf is found only in the fern plants (pteridophytes) and seed plants (spermatophytes), associated with the vascular system. Such a leaf may develop several distinct regions, the most conspicuous of which is the expanded portion or blade. In many cases where the blade arises directly from the axis, and no other region appears, the leaf is called sessile. Very frequently, however, the blade has a stalk of greater or less length, called the petiole. In many cases, also, the petiole bears at or near its junction with the axis a pair of appendages of various form, called stipules. The stipules may be conspicuous and leaflike or merely minute bractlike bodies; they may be distinct from one another or united in various ways. In the smartweeds they unite and form a conspicuous sheath about the stem just above the insertion of each leaf. Still another leaf region which may appear conspicuously in grasses is the sheath, which more or less surrounds the stem. The angle formed by the leaf with the stem is called the axil.

Forms of Leaves. The form of the blade varies greatly and has given rise to a long list of descriptive terms, which are of service only to the specialist in classification. These terms apply to the general outline of the leaf, as linear, lanceolate, ovate, cordate, etc.; or to the character of its margin, as entire, serrate, toothed, lobed, etc.; or to the character of its apex or base, as acute, obtuse, etc. The greatest modification in the form of the blade arises from its branching, in which case the general blade becomes divided up into smaller blades called leaflets. Such branching leaves are usually called compound, and the compounding may occur twice or thrice or even more times, resulting in a general blade made up of very numerous leaflets. The stalks of the leaflets are called petioles, and their stipules are stipels. Closely associated with the contour and branching of leaves is the system of veining or venation

(q.v.). Two general types of venation are recognized, called the parallel and the reticulate (or net-veined) types. In a parallel-veined leaf the prominent veins run approximately parallel from the base to the apex of the blade, resulting in a comparatively narrow and elongated outline and an entire margin, as in grass blades. This type of venation is characteristic of the monocotyledons, although all of them do not possess it, nor is it absolutely restricted to them. A more significant phrase for this type, perhaps, is closed venation, implying that the veins do not end freely in the margin. As a result of this, such leaves do not become toothed or lobed, nor do they branch. In a reticulate veined leaf the veins branch freely in various directions, and there is usually evident, especially on the lower surface, a distinct and often conspicuous network of veins. Such leaves may be characterized as exhibiting open venation, as many of the veins have free ends, especially in the margins, resulting in a tendency to toothing, lobing, and branching. The dicotyledons exhibit such leaves in the greatest profusion. The ferns also have open venation, but the veins fork repeatedly, i.e., they are dichotomous. (See DICHOTOMY.) Reticulate veined leaves exhibit two prominent types, the palmate and the pinnate. In the former, three or more main ribs diverge from the base of the blade, resulting in a broad outline. When such leaves are lobed or branched, they are said to be palmately lobed or compound. In pinnate leaves there is a main rib (midrib) which runs through the blade from base to apex and gives rise to lateral ribs of

FIG. 1. CROSS SECTION OF LEAF.

Showing upper and lower epidermis with stomata (a), air chamber (b), in palisade parenchyma, and section of a vein in the spongy parenchyma.

secondary importance, resulting in a comparatively narrow outline. When such leaves are lobed or branched, they are said to be pinnately lobed or compound. Fern leaves (fronds) are very commonly pinnately compound, and a special terminology is applied to the branches, the main branches being called pinnae, and the ultimate branches being called pinnules.

Structure of Leaves. The minute anatomy or histology of the ordinary foliage leaf is quite uniform. The upper and under surfaces are bounded by a single layer of colorless compact cells, forming the epidermis (Fig. 2). Between these two layers of epidermis, above and below, the working cells of the leaf are found, called

collectively mesophyll. The mesophyll cells contain the green color bodies (chloroplasts) and in ordinary horizontal leaves are organized into two distinct regions. The cells against the upper epidermis are elongated and stand closely side by side, with the long axis at right angles to the leaf surface. This is called the palisade region of the mesophyll, and it is explained by the fact that this surface is exposed to the direct rays of light. The mesophyll cells in the lower region of the leaf are irregular in form and loosely aggregated, leaving irregular but continuous intercellular passageways. This region is called the spongy mesophyll. The third histological region of the foliage leaf is the vascular region, represented by the veins which traverse the mesophyll in every direction. The epidermis does not hermetically seal the mesophyll tissue from the outside air, but in leaves exposed to air

FIG. 2. EPIDERMAL CELLS AND STOMATA FROM A LEAF.

it is perforated by numerous very small openings, called stomata (Fig. 3), popularly known as breathing pores. They are automatic gateways in the sense that the calibre of the pore may be enlarged or diminished in response to various conditions, thus regulating the amount of exchange between the air in the mesophyll region and that outside. The regulating mechanism consists in two concentric cells, called guard cells, which face each other, and which may change the size of the opening between them, as the lips may regulate the opening of the mouth. Stomata occur in any epidermis which overlies green cells, and therefore they are naturally found in greatest numbers on the leaves. In the ordinary horizontal (dorsiventral) leaves they occur for the most part and sometimes exclusively on the undersurface, averaging about 60,000 to the square inch, although in some cases the number may reach over 400,000. Leaves which are equally exposed to the light on both sides have the stomata equally distributed upon the two surfaces. In floating leaves the stomata are upon the upper surface only. The significance of the occurrence of stomata chiefly upon the underside of horizontal leaves is found in the fact that the intercellular passageways with which stomata communicate are best developed on the underside of the leaf. Associated with the epidermis of leaves there are also numerous hairs (see THICHOMES), whose occurrence and character form part of the descriptions of systematic botany. For example, if hairs are absent, the leaf is spoken of as glabrous, and, if present, the terms

pubescent, hirsute, tomentose, woolly, etc., describe their character.

Modified Leaves. There are numerous structures in plants which have long been regarded as modified leaves, i.e., leaves which have been diverted from their ordinary work as foliage leaves to serve some other purpose either exclusively or in addition to their ordinary work. It is a matter for serious doubt whether all such structures have actually been derived from foliage leaves, but they all may be grouped as foliar organs. In addition to foliage leaves, therefore, prominent among other foliar organs are the following: *pitchers*, as in the various "pitcher plants," for entrapping various insects, sensitive flytraps, as in sundews and *Dionaea* (q.v.) (see CARNIVOROUS PLANTS); *storage organs*, as in bulb scales and many seed leaves (cotyledons); *bud scales*, used for protecting young parts; *spines*, as in the barberry and holly, where every gradation between spiny-toothed leaves and true spines is found; *tendrils*, which are often leaves or leaf parts adapted for climbing; *bracts*, which are leaves modified in size and color and associated with flowers; the *floral organs*, as sepals, petals, stamens, carpels, all of which may be regarded as foliar structures, but probably not modified foliage leaves as is commonly stated.

Arrangement of Leaves. The distribution of leaves on the stem has given rise to a subject called phyllotaxy, which undertakes to study the laws which govern the distribution. The general conclusion reached is that leaves are distributed so as to economize space and to obtain a light exposure, but this is to be regarded as the result of the arrangement rather than its cause. The most fundamental classification of leaves on the basis of arrangement is into the cyclic and spiral arrangements. In the former two or more leaves stand together at the same joint (node) of the stem, dividing the circumference between them. If the cycle consists of two leaves, they are called opposite, while, if it consists of three or more, they are called whorled or verticillate. In the spiral arrangements the leaves stand singly one after another, i.e., each joint of the stem bears but a single leaf, and they are commonly spoken of as alternate. It is the spiral arrangement which has developed the largest discussion in reference to the laws of phyllotaxy, for the cyclic arrangement represents merely two or more spirals ascending the stem. In the simplest alternate arrangement the second leaf stands upon the opposite side of the stem from the first, and the third leaf stands directly over the first. This results in two vertical rows of leaves, one on each side of the stem, an arrangement indicated by the fraction one-half. The fraction signifies the angular divergence between two successive leaves, and the denominator the number of vertical rows. The next higher arrangement is one in which the angular divergence between two successive leaves is one-third of the circumference, and, as a consequence, the leaves occur in three vertical rows, and the fractional expression is one-third. The next higher arrangement is indicated by the fraction two-fifths, which means that the angular divergence is two-fifths of the circumference of the stem, that there are five vertical rows, and that the spiral line makes two turns around the stem before it reaches the same vertical row with which it started. The curious feature of the system appears at this point. Succeeding frac-

tions may be obtained by adding the numerators and denominators of the two preceding fractions. For example, the fraction which follows the one-half and one-third arrangements is two-fifths, and the next would be three-eighths, and so on. The higher numbers, such as five-thirteenths, eight twenty-firsts, etc., occur in certain pine cones, but in ordinary foliage leaves the lower numbers of the series are the common ones. It is often difficult to determine the normal arrangement, since the stem axis is not always perfectly straight in its growth.

Ecology of the Leaf. Ecologically the leaves of plants may be considered (1) from the standpoint of the various leaf forms found in nature,

FIG. 3. BRANCH OF HAREBELL

(*Campanula rotundifolia*) which has suffered injury and has in consequence developed basal (juvenile) leaves upon the stem. This result has also been ascribed to the illumination.

and (2) from that of the evidence obtained by experiments to determine the cause of the various forms. In general, leaves are expanded organs, and they also have a position which is in most cases perpendicular to the majority of the incident rays of light. This position is technically termed diaphototropic. It can readily be seen that these conditions favor the absorption of the largest quantities of radiant energy; and, inasmuch as radiant energy is essential to the growth and life of plants, it is clear that the expanded form and the diaphototropic position are distinctly advantageous, though it by no means follows that the need for light has caused either the form or the position. Large numbers of

leaves are finely divided; this is conspicuously true in the hydrophytes (q.v.), but it is also true of a vast number of plants with aerial leaves. While we can hardly believe that compound leaves have been caused in any such way, it is nevertheless true that a larger amount of leaf surface can be presented to the sunlight than in the case of plants with entire leaves. Perhaps the most advantageous leaf type of all is that which is illustrated by the grasses; here vertical leaves or leaves which are approximately vertical are grouped together in vast numbers, probably securing the greatest leaf surface in a given space that is found anywhere in the plant kingdom. Simple experimentation shows, however, that the vertical position of grass leaves, at least in many cases, is due to mechanical causes and has little or no relation to light stimuli. Another condition which favors the admission of light is the presence of petioles. Maple leaves which are developed in the strong sunlight have short petioles, while more shaded leaves acquire long petioles and thus ultimately get into a well-lighted position, if that be possible. Petioles thus give a much greater plasticity and flexibility to leaves. Other leaves have the power of motility which is strikingly illustrated in the sensitive plant and clover. The advantage of this motility is not altogether clear, especially since the closing of the leaf occurs chiefly in the night rather than in the day. (For a further discussion of this topic, see XEROPHYTES.)

The placing of the leaves on the stems also varies to a high degree in nature, and in general there seems to be a sort of relation between the phyllotactic arrangement and type of leaf, since large leaves are commonly farther apart than small ones. Rosette plants present a very interesting type of leaf arrangement, since the outer leaves often have long petioles and the inner ones none at all; not only this, but the phyllotactic arrangement is such that the shading of one leaf by another is largely prevented. In one way or another, then, it seems that there is a general tendency in nature for plants to dispose their leaves in such a way as to prevent shading. It is very doubtful, however, if this can be regarded as a direct result of the light stimulus. If in nature leaves are not seen to shade each other to any great extent, it may be that this is not an adaptation by natural selection, but rather that the leaves which were shaded have been compelled to die through getting insufficient food; this results in a survival of the unshaded leaves. A study of the leaves of a patch of rank weeds shows that all the lower leaves have died and that only the uppermost have been able to endure.

Experimental studies on leaves by Goebel, Brenner, and others have contributed much to the solution of the question of the causes of leaf shape and form. Goebel's theory is that light is the chief factor in the matter. His experiments on cacti and on the harebell have shown that if the light is weak large leaves develop, whereas strong light develops small leaves. Other experiments which have been made more recently throw grave doubt upon Goebel's results: in the first place, many instances have been cited in which light favors rather than retards the development of leaves; and secondly, other factors which Goebel did not recognize have, even in the very forms which he studied, produced the very results which he referred to

light (Fig. 4). Kohl and more recently Brenner have considered that moisture is the chief element which affects leaf shape, particularly the relation which exists between absorption and transpiration. To illustrate, in a moist atmosphere leaves grow large because the transpiration is checked and the turgor is thereby increased. On the contrary, in dry air leaves are small because the transpiration is increased and the turgor reduced. In other words, anything which tends to increase or decrease cell

FIG. 4. LEAVES OF THE WHITE WATER BUTTERCUP (*Ranunculus aquatilis*): a, as grown in the water; b, as grown in the air.

turgescence tends to modify not only the leaf size but also the leaf form itself (Fig. 4). It is not possible at present, on account of the very small number of experiments, to reach any very definite conclusions. A great many differences which leaves show cannot now be referred to any mechanical cause, but it surely seems to be the present tendency to adopt an explanation of this kind for the variations in leaves rather than to give a teleological explanation.

The structure of leaves varies as well as the external form, and here also two prominent theories have been advanced to account for the changes observed. The chief changes which have been observed are associated with the chlorophyll cells and the epidermis. Stahl in particular has held that increased light causes the development of palisade cells. This view has been rather generally accepted, and at present there seems to be no valid reason for serious objection to it. It may, however, rightly be a subject for further investigation to settle the question of the precise effect of light upon cell structure. Leaves which are grown in a moist atmosphere develop a thin wall, whereas a thick wall is developed in a dry atmosphere. Perhaps the cause in the latter case is to be referred to the greater concentration produced by excessive transpiration. This might lead to a deposition of cell-wall material. Stomata, as a rule, are less subject to experimental change than are the other leaf organs. However, some plants, as the mermaid weed, do not develop stomata when submerged. The stimulating cause for this change has not

been suggested. For bibliography, see BOTANY. See also BUD; HISTOLOGY.

LEAF, WALTER (1852-). An English classical scholar and banker. He was born at Norwood and was educated first at Harrow School. In 1874 he graduated B.A. from Trinity College, Cambridge, having taken numerous honors, and from 1874 to 1877 he was a fellow of Trinity. Entering the banking firm of Leaf, Sons & Co., he was its chairman in 1888-92. One of the founders of the London Chamber of Commerce, he served as its deputy chairman in 1885-86, chairman in 1887, and vice president in 1914; in 1914 also he was chairman of the London County and Westminster Bank; and he was a member of the small special committee whose task it was to finance the British Empire during the European War. Cambridge gave him the degrees of M.A. and Litt.D. and Oxford that of D.Litt. In addition to his business activities he found time to devote himself to classical studies. He served as president of the Hellenic Society in 1914 and published, besides articles in learned journals, *The Story of Achilles* (1880), with J. H. Pratt; *The Iliad of Homer Translated into English Prose* (1882), with A. Lang and E. Myers; *The Iliad, Edited with Introduction and Notes* (2 vols., 1886-88; 2d ed., 1900-02), a very valuable work; an edition of *The Iliad* (2 vols., 1895-98), with M. A. Bayfield; *Companion to the Iliad* (1902); *Troy: A Study in Homeric Geography* (1912). Leaf published also *A Modern Priestess of Isis*, a translation from the Russian (1894), and *Versions from Hafiz: An Essay in Persian Metre* (1898).

LEAF BEETLE. Any one of a large family of beetles, the Chrysomelideæ, so called because both adults and larvæ feed on the leaves of plants. The family is an enormous one, as it comprises more than 18,000 species. The great majority are found in the tropics, but over 600 species occur in North America. The leaf beetles are nearly all small, the potato beetle being one of the largest of the family. The eggs, as a rule, are laid on the food plant. The larvæ of many species live on the leaves, either exposed or covered with grass. Some carry perfectly constructed cases; others are leaf miners, as the Hispini; still others are root borers and stem borers, and a few are aquatic—a remarkable diversity of habit in the larvæ of a single family. The larvæ cover themselves with excrement. The most remarkable covering formed by any insect, perhaps, is that made by a tropical American leaf beetle of the genus *Porphyraspis*, which lives on coco palms at Bahia. The larvæ are covered by a sort of bird's-nest-like coating of fibres or threads attached to the anal extremity, which are wood fibres that have passed through the alimentary canal and have been stuck together again. Some of the tropical species of this group are extremely beautiful and mounted in gold are used as jewelry. With the species of temperate regions the color usually fades and becomes sordid after death. Among well-known destructive leaf beetles are those of the genus *Crioceris* (see ASPARAGUS INSECTS), the potato beetle, and the cucumber beetle, and its allies of the genus *Diabrotica*. In California the adults injure fruit and fruit trees, and in the East they eat the leaves of cucumber, squash, and melon vines, and the young bore into the stems and roots of the same and other food plants. (See CORN INSECTS.) All the species of *Diabrotica*

are difficult insects to combat. Another group of agricultural pests in this family is that of the flea beetles. (See FLEA BEETLE.) The brown and black larvæ of the grapevine flea beetle feed on the upper surface of grape leaves. A well-known and destructive species is the imported elm-leaf beetle. (See ELM INSECTS.) On the sweet-potato and morning-glory vines small, flattened leaf beetles occur, which are gold and green. (See GOLDEN BEETLE.) Consult: George Dimmock, *Standard Natural History*, vol. ii (Boston, 1884), David Sharp, *Cambridge Natural History*, vol. vi (London, 1901); V. L. Kellogg, *American Insects* (2d ed., New York, 1908).

LEAF BUG. Any hemipterous insect of the family Capsidæ. The leaf bugs form the largest family of the true bugs. They are usually rather small, slender, and delicate insects. More than 1000 species have been described, of which 250 inhabit the United States, but there are many more undescribed and unnamed forms. They are found chiefly upon the leaves of plants, but are not all true plant feeders, and very few of them occur in sufficient numbers to become important crop enemies. The four-lined leaf bug (*Pædicapsus lineatus*) is, however, a common garden pest all through the eastern, central, and southern United States, sucking the sap of gooseberry bushes, currants, dahlias, and many other garden plants. Those species which are not plant feeders are predacious and destroy other insects.

LEAF CACTUS, ACKERMANN'S. See Colored Plate of CACTI

LEAF CRUMPLER, RASCAL. See RASCAL LEAF CRUMPLER.

LEAF-CUTTER BEE. A name given to certain species of solitary bees (see BEE) of the genus *Megachile* in consequence of their habit of lining their nests with portions of leaves or of the petals of flowers, which they cut out for this purpose with the mandibles. *Megachile centuncularis*, a species common to Europe and the United States, uses the leaves (not the petals) of roses, fitting the pieces together so as to form one thimble-shaped cell within another, in a long cylindrical burrow, the bottom of each cell containing an egg and a little pollen paste. A single female will build 30 or more cells and will occupy 20 or more days in the work. *Megachile acuta* of the United States is a carpenter as well as a leaf cutter and excavates its tunnels in soft or partly decayed wood. In each tunnel thimble-shaped cells are made of pieces of rose leaves and are filled with pollen and honey. One egg is laid in each cell, which is then sealed with circular pieces of rose leaf. The cells of the leaf-cutter bees are also not infrequently placed in cracks of houses or trees, under stones and boards in deserted earthworm holes, or in the holes of the carpenter bee (q.v.), in auger holes, or in lead pipe; and they have even been found in the nozzle of an old disused pump. See Plate of BEES.

LEAF-CUTTING ANT. These ants belong to the Myrmicine tribe *Atti* which is peculiar to America and best developed in the tropics. They cut and carry to their nests pieces of leaves for the purpose of growing a fungus. The bits of leaves are worked over into a pulpy mass and frequently mixed with caterpillar excrement or other organic material. It is inoculated by the ants with the particular fungus which they are growing and all other sorts are carefully

destroyed. The fungus is used by the ants as food. In the tropics some of the colonies are enormous. The ants work for as much as half a mile from the nest and are capable of stripping a tree in a few hours. It is impossible for man to carry on agriculture in the vicinity of such a nest. The most northern species (*Atta septentrionalis*) is found in the vicinity of New York City but its colonies are small. See ANTS.

LEAF FROG. One of the small American tropical frogs of the family Cystignathidae and genus *Hylodes*, of which about 50 species are known. All are less than 2 inches long, are as a rule brightly colored and changeable, and have the general habits of the tree frog (q.v.). The fingers as well as the toes are provided with disks, enabling the animals to cling to the leaves of plants and trees, as they habitually do. The males have vocal sacs and make chirping sounds. A remarkable species is the coqui (*Hylodes martinicensis*), of Porto Rico, Haiti, and the Antilles, whose young undergo their whole metamorphosis before emerging from the protection of the egg. The female glues about 20 large eggs, enveloped in a foamy mass upon a broad leaf or in the axil of a flag, and then seems to remain near by awaiting developments. Each embryo (tadpole) grows to maturity within its egg, developing neither gills nor gill openings, but apparently breathing through the highly vascularized tail. At last the food yolk and liquids of the egg are exhausted, the tail is rapidly absorbed, and a minute but perfectly formed frog breaks the shell and hops away. A frog of the Solomon Islands has a similar method of development within the egg. See HYLODES.

LEAF HOPPER. A bug of the family Jassidæ. The leaf hoppers are among the most abundant of the bugs and comprise a great complexity of forms. By most modern writers the group is considered of superfamily rank and is known as Jassoidea. All are small insects. One species (*Cicadula exilis*) infests winter wheat. The grapevine leaf hopper (*Erythroneura vitis*) often occurs in great numbers on the vine and is very injurious to it. It is known to grape growers as the thrips or grapevine thrips, a misleading name. (See THRIPS.) Scores of species feed upon grasses and bring about a very extensive, although probably unnoticed, damage to the grain ranges of the West.

LEAF INSECT, or WALKING LEAF. One of a very remarkable group of insects of the orthopterous family Phasmodæ, natives of tropical countries, chiefly of the East Indian region, having wings extremely like leaves, not only in color, but in the way they are ribbed and veined. The joints of the legs are also extended in a leaflike manner. So close is the resemblance that the natives of the countries where they abound firmly believe that they were once real leaves, which by some metamorphosis of habit have taken to walking. There is also a marvelous similarity between their eggs and plant seeds, even in minute structure. These insects spend their lives among foliage, move slowly, and would be much exposed to every enemy did not their leaflike appearance preserve them from observation. Spectroscopic analysis of the coloring matter of these insects' wings shows a slight distinction from that of chlorophyll, but that it does not differ from that of living leaves. Confined leaf insects will, in the absence of leaf food, eat one another's wings. See MIMICRY.

LEAF MANNA. See LEEP INSECT.

LEAF MINER. A member of a group of very small moths, known as the Tineidæ, of serial or superfamily rank, containing a number of families and more than 4000 described species. The popular name "leaf miner" refers to the fact that the larvæ of very many species mine out the chlorophyll from between the upper and lower surfaces of the leaves of plants. The leaf miners proper belong especially to the tineine families Gracillariidæ, Lavernidæ, Elachistidæ, Lithocolletidæ, Lyonetiidæ, and Nepticulidæ, but some of the Tineidæ and Gelechiidæ are also leaf miners. Others of the tineine series are leaf rollers, leaf webbers, seed feeders, twig borers, gall makers, and root feeders, and others still feed upon animal matter such as skins, fur, woolen goods (see CLOTHES MOTH), and also upon dried fruits, stored grain, and similar substances. Some of them are leaf miners only in early life and later construct cases which they bear around with them while feeding externally on the foliage of plants. This habit is characteristic of the family Coleophoridae.

Although very small, the tineines are frequently very beautiful and are ornamented with brilliant metallic scales. The wings are usually very narrow, sometimes lance-shaped, and bear long marginal fringes. Two species of *Tinea* have been recorded as viviparous. Examples of tineines are very difficult to collect and to preserve, and this accounts for the fact that, although 4000 species have been described, entomologists are really only just beginning the study of the group, which surely comprises very many thousands of species.

Certain other insects aside from these little moths are leaf miners in the larval stage, as certain leaf beetles of the tribe Hispini, certain flies of the families Oscinidæ and Anthomyiidae, and certain sawflies of the family Tenthredinidæ.

Consult David Sharp, *Cambridge Natural History*, vol. vi (London, 1901), and J. H. and A. B. Comstock, *Manual for the Study of Insects* (8th ed., Ithaca, 1909). See BUTTERFLIES AND MOTHS; SAWFLY.

LEAF MONKEY. See LANGUR.

LEAF ROLLER. A small nocturnal or crepuscular moth of the family Tortricidæ, most of which in the larval state roll themselves within the leaves of plants, fastening them with silken threads. They are generally less than an inch in breadth across the expanded wings and have naked antennæ. The fore wings are usually marked with spots and bands, but the hind wings are without ornament. The larva either rolls a leaf into a nest in which it lives singly, or in some species many of them may bind all the leaves of a branch into one common nest. The yellow active larvæ of one species (*Cacocia oerastivorana*) make such a nest on the wild or choke cherry. The larvæ change to pupæ within the nest, but just before the moth emerges the pupa makes its way to the outer surface of the nest, where it hangs attached by caudal hooks. The rolling of the leaves with the solitary species is due in part to the individual work of the larva, in part to the contraction of the silk in drying, and in part to the changes in the growth of the vegetable tissue. Some tortricid larvæ are not leaf rollers, but inhabit fruit, like the codling moth (q.v.), the well-known enemy of apples and pears; *Carpocapsa splendana*, which lives in acorns and walnuts; and *Carpocapsa salitans*, which inhabits the seeds known as

jumping beans (see JUMPING BEAN). Certain beetles (weevils) have a similar habit of rolling leaves.

LEAF SPOT. A plant disease. See DISEASES OF PLANTS.

LEAGUE (from the Lat. *leuca*). A measure of length of great antiquity. It was used by the Romans, who derived it from the Gauls and estimated it as equivalent to 1500 Roman paces, or 1.376 modern English miles. The league was introduced into England by the Normans, probably before the battle of Hastings (1066), and had been by this time lengthened to 2 English miles of that time, or 2.9 modern English miles. At the present day the league is a nautical measure and signifies the twentieth part of a degree—i.e., 3 geographical miles, or 3.456 statute miles. The French and other nations use the same nautical league, but the former nation had (until the introduction of the metric system) two land measures of the same name: the legal posting league, 2.42 English miles, and the league of 25 to the degree, 2.76 statute English miles. The former became 4 kilometers (2.49 miles).

LEAGUE (OF, Fr. *ligue*, ML. *liga*, *lega*, bond, from Lat. *ligare*, to bind). In French history, a name specifically applied to the Holy League (Sainte Ligue) organized in 1576 by Henry, Duke of Guise, in opposition to the granting of the free exercise of their religion and political rights to the Huguenots. While its ostensible object was the maintenance of the Roman Catholic religion in its predominance, the real aim of the Guises was rather to exclude the Protestant princes of the blood from the succession to the throne. For an account of the civil war that ensued, see FRANCE; HENRY III; HENRY IV; HUGUENOTS; and consult the references given; also F. A. M. Mignet, *Histoire de la Ligue* (5 vols., Paris, 1829).

LEAGUE OF THE IROQUOIS. See IROQUOIS.

LEAGUE OF THE PRINCES (Ger. *Fürstentbund*). A league originated by Frederick the Great, in 1785, to oppose Joseph II in his purpose of altering the constitution of the German Empire and extending the Austrian power in south Germany by the acquisition of Bavaria in exchange for Belgium. The league was formed between Prussia, Saxony, and Hanover on July 23, 1785, and was afterward joined by the dukes of Brunswick, Mecklenburg, Saxe-Weimar, and Saxe-Gotha, the margraves of Anspach and Baden, the Elector of Mainz, and other princes. Having effected the abandonment of Joseph's plans, the league was dissolved at Frederick's death, and a later attempt by Charles Augustus of Weimar to make it the basis of a German union under the leadership of Prussia was unsuccessful. Consult Leopold von Ranke, *Die deutschen Mächte und der Fürstentbund* (2d ed., Leipzig, 1875).

LEAGUE OF THE PUBLIC WEAL (Fr. *Ligue du bien public*). An alliance of the great French nobles against Louis XI, formed in 1465 under the leadership of Charles, Count of Charolais (Charles the Bold of Burgundy). The ostensible object of the nobles was to put an end to the tyrannical government of Louis XI; but in fact their objects were purely selfish, their only aim being to regain the old extensive feudal privileges, which had enabled them to defy even the royal power. They gained a victory over Louis XI on July 16, 1465, at Montlhéry,

and in October, in the Peace of Conflans, the King was forced to make great concessions. But the advantage gained by the nobles was of short duration, for the crafty monarch succeeded in crushing them individually and made the royal power supreme in France. See FRANCE; LOUIS XI. Consult Ernest Lavisse, *Histoire de France depuis les origines jusqu'à la révolution*, vol. iv, part ii (Paris, 1902).

LEAKE, SIR JOHN (1656-1720). An English admiral. He was born at Rotherhithe, London, England; early entered the navy, served under his father in 1673 in the action between Sir Edward Spragg and Van Tromp; and afterward, when appointed captain, convoyed victualers into Londonderry, thus compelling the enemy to raise the siege. In 1702 he was put in command of a squadron and sent to Newfoundland as Governor. Arriving there, he speedily destroyed the French settlements and their fishing outfits. For these services he was made on his return rear admiral and soon afterward vice admiral of the blue and knighted. In 1704 he displayed great skill and gallantry in relieving Gibraltar when it was on the point of being taken by 500 Spaniards who had climbed up the rock. Soon after he was made vice admiral of the white and again, in 1705, relieved Gibraltar by destroying the French squadron. In 1706 he relieved Barcelona, when it was reduced to great extremity by the Spaniards and French, obliging King Philip to raise the siege. In the same year he commanded the fleet which captured Alicante, Cartagena, and the island of Majorca. He was now made admiral of the white and commander in chief of the Mediterranean fleet. In 1708 he reduced Sardinia and Minorca. In 1709 he was made rear admiral of Great Britain. The same year he was appointed Lord of the Admiralty and continued high in office till the death of Queen Anne. He was several times a member of Parliament for Rochester. On the accession of George I he was superseded on a pension of £600 a year. He died at Greenwich on Aug. 21, 1720. *The Life of Sir John Leake*, by Stephen Martin Leake, his nephew, was privately printed in London (1750).

LEAKE, WILLIAM MARTIN (1777-1860). A British officer and archaeologist, born in London. He was educated at the Royal Military Academy at Woolwich, received a commission as second lieutenant in the artillery service, and in 1794 was ordered to the West Indies, where he remained for four years. In 1799 he was sent as captain to instruct the Swiss in artillery practice. Leaving Constantinople in 1800 to join the Turks, who were then fighting the French in Egypt, he traveled through Asia Minor, Jaffa, and Egypt, and even traversed the desert, but arrived only after the capitulation had been signed. In 1801 he made a careful survey of Upper Egypt and in 1804 traveled through the greater part of Turkey and Greece, surveying the coasts and fortresses and making collections, which are now in the British Museum. After undertaking extensive explorations in the Orient for the British government (1808-13), he retired in 1815 with the grade of lieutenant colonel. His principal works, which are all marked by thoroughness, minuteness, and technical skill, are: *Researches in Greece* (1814); *The Topography of Athens* (1821), the first scientific treatise on the subject and still of great value; *Journal of a Tour in Asia Minor, with Comparative Remarks on the Ancient and Modern Geography*

of that Country (1824); *Travels in the Morea* (1830); *Travels in Northern Greece* (1835); *Peloponnesiaca* (1846); *Numismatica Hellenica* (1854), with a supplement (1859). Consult J. H. Marsden, *Brief Memoir of the Life and Writings of W. M. Leake* (London, 1864), and J. E. Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

LEAL, J. DA SILVA MENDES. See MENDES LEAL, JOSÉ DA SILVA.

LEAMINGTON, lēm'ing-ton, or LEAMINGTON PRIORS. A fashionable watering place in Warwickshire, England, on the Leam, a tributary of the Avon, about 2 miles from Warwick (Map: England, E 4). Leamington is of modern growth and owes its importance to its mineral waters, saline, sulphurous, and chalybeate. It has a proprietary college, erected in 1847 in the Tudor style, and numerous other educational establishments. The town hall, a handsome Renaissance building erected in 1884, contains a free library and art gallery. In the centre of the town is a pump room, a handsome structure. The manufacture of cooking ranges is an important industry. The town owns the Spa baths, open-air baths, water supply, gas, tramways, and cemeteries, and maintains free libraries, technical schools, and beautiful public gardens and parks. Leamington was an insignificant village until 1796, when the waters were discovered, and since that time they have attracted not only visitors, but residents. In 1838 the town obtained permission to call itself Royal Leamington Spa, but the name has now dropped completely out of use. Pop., 1901, 26,850; 1911, 26,713. Consult *Guide to and History of Leamington* (New York, 1888).

LEAMINGTON. A town and port in Essex Co., Ontario, Canada, on Lake Erie and on the Michigan Central and Père Marquette railways, 30 miles southeast by east (direct) of Windsor (Map: Ontario, B 9). There is an electric railway to Windsor and steamship communication with Pelee Island. The town possesses a public library. The manufacturing industries include milling, fruit canning, pickle making, cigar, and basket making. There are also manufactures of handles, catsup, sashes, and doors. Natural gas is found in the vicinity. There are two tobacco factories and a considerable trade in that product. The town owns its water works. Pop., 1901, 2451; 1911, 2652.

LEANDER, lē-ān'dēr. See HERO.

LEANDER. See ESS, JOHANN HEINRICH VAN.

LEANDER, lē-ān'dēr, RICHARD. The pseudonym of the German surgeon and author Richard von Volkmann (q.v.).

LEANDER, SAINT (c.550-c.601). Archbishop of Seville. He was born at Cartagena, Spain, and became a monk. His zeal in converting the son and successor of King Leovigild was punished by banishment. He betook himself to Constantinople and there formed a lasting friendship with Gregory, afterward Pope Gregory the Great (590-604). About 584 Leander was made Archbishop of Seville, and in 599 Gregory sent him the pallium and also dedicated to him his *Moralia in Jobum*. Leander's most important achievement was the conversion of the West Goths from Arianism to Catholic Christianity. His day is March 13.

LEANDER CLARK COLLEGE. See WESTERN COLLEGE.

LÉANDRE, lē-ān'dr', CHARLES LUCIEN

(1862-). A French portrait painter, pastellist, lithographer, and caricaturist. He was born at Champsecret (Orne) and studied under Bin and Cabanel in Paris. He began as a drawing teacher and portrait painter. Becoming associated in 1894 with the periodical *Le Rire*, he immediately made a name by his excellently drawn, good-natured, humorous caricature portraits and sketches. He later acquired more solid fame with his pastel portraits, which for delicate and precise draftsmanship, bold and harmonious color, fineness of texture, and dazzling flesh tints are unrivaled in contemporary art. His lithographs, which are models of technical ability, also deserve special mention. They are executed usually in black and white, with great depth, yet with an airy lightness of tone and a bold treatment of light and shade. Among the best known are "Yvette Guilbert's Tour"; "The Snobs"; "Souvenir of the First Communion" (1904); "The Woman with the Monkey"; "Ball in the Days of Henri Monnier" (1905). Among the works illustrated by him are Rostand's *Cyrano de Bergerac* (1900) and Murger's *Vie de Bohème* (1903). In 1896 he published an album of delightful sketches entitled *Nocturnes*. He became Chevalier of the Legion of Honor and received gold medals in 1891 and 1907.

LEANING TOWER. A tower which overhangs its base on one side. The most celebrated example is the campanile of Pisa, which has an obliquity of 13 feet in a height of 179. It was begun by the architect Bonannus of Pisa in 1174, continued by William of Innsbruck and others, and completed in 1350. It is built in the Romanesque style, to correspond with the cathedral, and is surrounded by open arcades of columns. Other well-known examples are in Bologna, the Torre Asinelli (1109) and the Torre Garisenda (1110), both square and built of brick, the latter well known through a passage in Dante's *Inferno*. The original campanile of Venice also leaned slightly; there are other examples at Pisa, Ravenna, and elsewhere in northern Italy, and a few in other parts of Europe. It has long been disputed whether the slant of these towers is accidental. That of Pisa shows an increased height in each successive story on the leaning side, which has been attributed by some (Rohault de Fleury, Mothes) to attempts of the architects to rectify a sinking while the tower was being built. Others (Grassi, Ricci, Goodyear) have advanced arguments to show that the slant here and elsewhere was intentional. The latter is the prevailing opinion. Consult: Russell Sturgis, *Dictionary of Architecture* (New York, 1905); W. H. Goodyear, "Brooklyn Museum Measurements of 1910 in the Spiral Stairway of the Leaning Tower," in *American Architect*, vol. xcvi (ib., 1910); id., *Analysis of the Report of the Pisa Commission on the Leaning Tower* (ib., 1910). For illustration, see PISA.

LEAPING FISH. See MUDSKIPPER.

LEAP INSECT. See LEEP INSECT.

LEAP YEAR. A year of 366 days (see CALENDAR), so called because it leaps forward a day as compared with an ordinary year. For convenience the leap years are chosen to be those in which the number of the year is divisible by four without remainder; but, of the years divisible by 100, only those are leap years which are divisible by 400. See BISSEXTILE.

LEAR, EDWARD (1812-88). An English artist and writer of verse, born at Holloway, Lon-

don, May 12, 1812. He was of Danish descent. As a boy, he showed a liking for painting and natural history; at the age of 19 he found employment as draftsman in the Zoological Gardens; and a year later a book of his ornithological drawings attracted the attention of the Earl of Derby, for whom he drew the plates to *The Knowsley Menagerie*. He traveled extensively on the Continent and in the East, filling his books with drawings. He settled in Italy and died at San Remo, January, 1888. It was for the young son of the Earl of Derby, in whose family Lear became a permanent favorite, that his first nonsense book was written (1846). There followed: *Nonsense Songs* (1871); *More Nonsense Songs* (1872); *Laughable Lyrics* (1877). The fame of his humorous books, with their preposterously comic illustrations, quite surpassed that of his serious productions, which, from pen or pencil, or both, include: *Illustrations of the Family of the Psittacidae* (1832); *Gleanings from the Menagerie at Knowsley Hall* (1846); and the journals of travel in Italy (1846), Greece and Albania (1851), the Ionian Islands (1863), and Corsica (1870). In 1912 appeared the *Complete Nonsense Book* (New York), which brings together all the original nonsense pictures and nonsense verses and adds new material. Consult: Tennyson's *Poems*, illustrated by Lear, with memoir by Lushington (London, 1889); *Letters of Edward Lear* (New York, 1908), *Later Letters of Edward Lear* (ib., 1911).

LEAR, TOBIAS (1762-1816). An American diplomatist, born at Portsmouth, N. H. In 1783 he graduated at Harvard and in 1785 was appointed private secretary to Washington, in which position he remained until Washington's death. From 1802 to 1804 he was Consul General at Santo Domingo and in the latter year became Consul General at Algiers. He was appointed in 1805 to conclude a peace with Tripoli and despite sharp censure from some quarters arranged terms approved throughout by the United States government. Subsequently he was connected with the War Department at Washington as an accountant until his death by suicide.

LEARMONT, lër'mönt, THOMAS. See THOMAS OF ERCELDOUNE.

LEARNED, lër'néd, MARION DEXTER (1857-). An American Germanic scholar, born near Dover, Del. He graduated in 1880 from Dickinson College, was instructor in languages at Dickinson Seminary in 1880-84, studied in Germany in 1885, and graduated Ph.D. in 1887 from Johns Hopkins University, where he was instructor, associate, and associate professor of German from 1886 to 1895. Thereafter he served as professor of German at the University of Pennsylvania. He became editor of *Americana Germanica* (now *German American Annals*) in 1897, made researches for the Carnegie Institution in 1909, and was president of the Modern Language Association in 1909. He published: *The Pennsylvania German Dialect* (1889); *The Saga of Walther of Aquitaine* (1892); *Herder and America* (1904); *The Life of Francis Daniel Postorius* (1908); *The Family of Abraham Lincoln* (1909); *Guide to the MS. Materials Relating to American History in the German State Archives* (1912).

LEARNING. In general, the modification of behavior in the light of experience. If an organism lived always under the same condi-

tions, learning would be unnecessary. If, however, new conditions arise to which the present behavior of the organism is inadequate, and if the animal is able to adjust itself to these new conditions, then it has "learned"; the process of adjustment is the process of learning.

The study of learning is important for two reasons. 1. Since the behavior of the learning organism has a conscious aspect, its study gives an index to the nature of consciousness. (See PSYCHOLOGY; ANIMAL PSYCHOLOGY.) The problem of psychology, therefore, is to describe the mental processes which are present at various stages in learning and to correlate these processes with changes in the nervous system (See LEARNING IN ANIMALS.) Here we find, to be sure, a number of special syntheses, but nothing essentially new; the general psychology of learning is the psychology of perception and idea, of meaning, of memory, of language, of attention, of action; and the explanation of the learning process is likewise to be couched in terms of associative and determining tendencies. 2. Man, unlike the lower animals, anticipates changes in the environment; he is able, in a measure, to make the necessary adjustments before a change in conditions actually arises, for the human individual possesses free ideas. It is the business of education to anticipate these changes and adjustments and to prepare the individual to meet new situations when they arise. Educational technology is therefore interested primarily in such problems as the methods and economy of learning, the relation of learning to intelligence, to mental fatigue, etc. The methods of learning, e.g., may be reduced to three.

(1) the method of trial and success (trial and error, perseverance), in which one means after another is tried until the organism hits upon an adjustment that is effective; (2) the method of imitation, the intentional or unintentional copying of the behavior of one or more individuals (see IMITATION); and (3) the employment of free ideas: since man is endowed with memory and imagination, he can recall procedures which were effective in a former situation and can adapt and apply them to situations which are partly different. The first of these methods is the least economical, because it involves waste of time and effort; the second is economical, provided that the "copy" is adequate; the efficiency of the third, which characterizes the highest type of learning, is largely dependent upon the intelligence of the learner. There are also certain rules which must be followed if the best results are to be obtained. Thus, it is a cardinal rule of all such learning that attention must be given to the work in hand. Again, the committing to memory of any material is, in the last analysis, a function of the number of repetitions; but it is better to learn by wholes than by parts, and it is better to distribute the study over several periods than to confine it to one period. Again, learning is facilitated by frequent attempts to recall or recite the matter being learned.

For the relation of learning to intelligence, see MENTAL TESTS. For the relation of fatigue to learning, see FATIGUE. For muscular learning, or the development of skill, see HABIT.

Consult: C. H. Judd, *Genetic Psychology for Teachers* (New York, 1903); E. G. Swift, *Mind in the Making* (ib., 1909); S. S. Colvin, *The Learning Process* (ib., 1911); Ernst Meumann, *The Psychology of Learning*, translated by J. W.

Baird (ib., 1913); Colvin and Bagley, *Human Behavior* (ib., 1913).

LEARNING IN ANIMALS. The modification of the behavior of an animal organism by its previous experience. The modification must be comparatively rapid, since learning has a conscious aspect. (See ANIMAL PSYCHOLOGY.) In the study of the human mind interest is likely to centre in the alteration of consciousness correlated with the change in behavior; the animal psychologist, however, although his ultimate end is the same, must first concern himself intimately with behavior itself; so that his classifications of learning are usually made with reference rather to modification of behavior than to indicated changes in the accompanying consciousness.

1. Learning as the cessation of response to repeated weak stimulation occurs in the lowest animal forms. *Hydra* responds to weak mechanical shock by contraction, but upon continued repetition of the stimulus ceases to react. Sea urchins may respond only to the first of a series of shadows. Acquired behavior of this sort is seldom permanent; after an interval without stimulation the animal will again give its original response; and the learning may be dependent solely upon sensory adaptation.

2. The change in behavior under repeated stimulation may consist of a heightened reaction. Thus, the avoiding reaction of an earthworm may, after the animal has been continuously prodded, become so exaggerated that the creature whips its head rapidly about. This type of learning is also of short duration and may be due to a summation of nervous impulses.

3. Continued strong (and probably injurious) stimulation may result in a succession of varied negative responses. The animal appears to try various means of ridding itself of the stimulus, until at last it is successful. We are told that a starfish which had a piece of rubber tubing placed over one of its arms tried to remove the object in the following ways: "rubbing it off against the ground, shaking it off by holding the arm aloft and waving it pendulum-wise in the air, holding the tube against the ground with the neighboring arm and pulling the afflicted arm out, pressing other arms against the tube and pushing it off, and, finally, as a last resort, amputating the arm." Learning of this sort is never permanent and is probably due to the overflow of increased nervous excitation into other than the usual channels.

4. The acquisition of rhythmic habits is, perhaps, a distinct form of learning. The sea anemone, which expands its tentacles at high tide, will continue to do so at the regular tidal intervals for some time after it has been removed to an aquarium. If a new artificial rhythm, like that of the tide, is established in the aquarium, the creature will fall into the new rhythm and continue to open out its tentacles at the rate of the newly established intervals, even after the artificial tide has ceased.

5. In the homing behavior of certain animals (e.g., ants, bees, solitary wasps, many vertebrates) the creature seems to learn its path to a new home with remarkable rapidity. It is difficult to say whether the mechanism of learning, in the case of homing, is exceptional. Various suggestions have been made: guidance by visual landmarks, by the general direction of the light, by the olfactory trail laid down when the animal left the nest (a topochemical or olfac-

tory space perception of the direction of the footprint has been supposed in the case of ants), by general kinesthetic memory of the movements made on leaving the nest, by a special kinesthetic "sense of own-direction." The learning of the homeward route is instinctive and might be based upon any one or more of the factors mentioned.

6. The dropping of the useless or injurious movements involved in a complex response to stimulus may constitute learning. Here the methods of the maze and of the puzzle box have been extensively used for study. The animal is called upon to find its way through a labyrinth; or its task is to operate a series of levers, catches, strings, or similar mechanisms in a given way and in a given succession, in order that it may open the door of a box. In both cases the animal must be provided with a motive, which is generally the satisfaction of hunger or the avoidance of pain or some form of discomfort. Relief is gained by the animal when it has passed through the maze, or when it leaves or enters the puzzle box. Sometimes a wrong movement, such as the following of a wrong course in the maze, is punished by an electric shock or other unpleasant stimulus. The results of experimental work show that learning by the dropping of merely useless movements is slow and gradual; learning by the elimination of harmful or painful movements is much more rapid.

Learning in the present sense is a simplification of behavior. Oftentimes, however, the simplification is accompanied by the addition of some necessary movement. Thus *Paramecium*, when trapped at the end of a very thin column of water from which it cannot escape by its usual turning movement, after a number of trials abandons its usual reaction, and turns by bending its body sharply to one side. The simplification of behavior in this type of learning may thus, it appears, involve the inhibition of instinctive movements.

For the animal consciousness under the typical conditions of maze learning, see KINÆSTHETIC SENSATIONS IN ANIMALS.

7. Another type of learning is based upon associative memory (Loeb). Here the animal, instead of reacting to the usual stimulus, reacts to a second stimulus which has been regularly connected therewith. Pawlow, e.g., tests the formation of associations in animals by measuring the flow of saliva. The salivary flow is a response of the animal to the taste of food; but when some other stimulus (e.g., a color) is repeatedly presented in connection with the food, the flow may occur as soon as the animal perceives this associated stimulus. The strength of the association is then measured by the number of drops of saliva. Another investigator arranged to give an earthworm, crawling through a tunnel, an electric shock just after it had passed over a piece of sandpaper. At first the worm turned back only when it felt the shock, but later it learned to turn as soon as it reached the sandpaper. Yet another example is that of the kitten, whose response to the smell of food came presently to be given to the sound of the dinner bell.

8. The highest form of learning involves the presence of memory ideas. It is frequent in the human subject, but occurs rarely, if ever, in animals. See IMITATION IN ANIMALS; MEMORY IN ANIMALS.

For the significance of learning as an index of mind, see ANIMAL PSYCHOLOGY, and consult the general texts in the bibliography of that article.

LEASE. The act or instrument whereby any estate in land less than a fee is created. In its most extended sense the term thus includes the conveyance of a life estate as well as the agreement which results in a tenancy for years, at will or from year to year. More frequently, however, it is applied to the writing (not usually a deed) or the parol declaration creating an estate for years, or leasehold, as it is technically called. Formerly all leases, excepting leases for life (which required the same ceremonial as was requisite for the conveyance of a fee), were effected by parol. But the Statute of Frauds, passed in the twenty-ninth year of Charles II (1678), made a writing essential to the validity of all leases for terms exceeding three years. This provision has in many of the United States been modified by statutes requiring leases for more than one year to be in writing.

The immediate effect of a lease for years is to vest in the lessee an interest in the land, known technically as an *interesse terminum*, which has many of the characteristics of a leasehold estate, but which requires the entry of the lessee upon the land to make his title as tenant complete. Once in possession the lessee becomes the virtual owner of the premises for the period of his lease; he has a true estate in the land, which he can defend against the lessor as well as against the rest of the world, and which is limited only by the rules of law governing the relations of landlord and tenant.

As thus understood, a lease is a simple conveyance having no other effect than the creation of the bare property relation of landlord and tenant. The instrument by which the lease is effected may, however, include a variety of collateral agreements on the part of the lessor or the lessee, or both, creating contract relations between them in addition to the property relations. Of this nature are the usual stipulations of the lessee to pay a fixed rent, to keep the premises in repair, to make no assignment of the lease, or, on the part of the lessor, to grant a renewal of the lease, to pay for improvements at the expiration of the term, and the like. These agreements, if the instrument be under seal, become incorporated in the leasehold estate and, as the expression is, run with the land, binding successors of the lessor and lessee respectively as well as the original parties to the transaction.

It should be noticed, however, that a formal and valid lease is not necessary in all cases to create the relation of landlord and tenant. This may arise, as a tenancy at will or from year to year, by the entry of a tenant under a void lease, or, like a tenancy at sufferance, by the continued occupation without authority of a tenant whose lawful term has expired. Nor is it necessary that a lease shall specify all the obligations of the parties thereto. The most important of these, as the obligation of the landlord to defend his tenant's title, and the tenant's liability for waste and repairs, are the legal incidents of the relation of landlord and tenant and exist without reference to the terms of the lease. See ESTATE; LEASEHOLD; LANDLORD AND TENANT, and consult the authorities referred to under the last of these and under REAL PROPERTY.

LEASE AND RELEASE. An old form of conveyance of land. It had its origin in the practice of leasing land to a tenant for a term, as one year, and then, after his entry upon the land and during his term, releasing the reversion, or estate of the landlord, to him by a deed. The two transactions together had the effect of transferring the entire freehold estate of the grantor, which otherwise could be effected only by the inconvenient and public process of feoffment (q.v.), or livery of seisin (q.v.). It had the advantage over the latter of being a secret conveyance, but was subject to the disadvantage of requiring the actual entry of the tenant upon the land before he became capable of taking the reversion by the deed of release. This difficulty was obviated by the construction put by the courts upon the famous Statute of Uses (27 Hen. VIII, c. 10), which permitted the creation of a complete leasehold estate without the necessity of an entry by the tenant, by the device of conveying the land to his "use" for a year. The statute in question, by executing the use, i.e., by transferring to the tenant a legal title coextensive with his use, or equitable title, vested the possession in him and thus rendered him instantly capable of taking the landlord's estate by release. The two instruments of lease and of release could thus be executed in quick succession, and, later, the two acts became simultaneous and were merged in one and the same instrument. This process of lease and release was the usual mode of conveyance in England for 300 years and prevailed in the United States as well, until superseded by the simpler conveyance by deed of grant, which is now in vogue in both countries. See DEED; GRANT; CONVEYANCE.

LEASE/HOLD. In English law, the technical description of an estate for years. It arises upon a lease and constitutes a valid title, or estate, in the premises for the period described. It may be for any period of time, however brief or long, whether for a week or for 1000 years, and is subject to no restriction excepting that the limit of its duration shall be definitely fixed. If an estate in land be for an indefinite period, it is not a leasehold, even though it be measured in years.

Owing to the circumstances of its origin, the leasehold estate is classified as personal property, which, upon the death of the tenant or leaseholder, passes to his executor or administrator, and not, like real property, to his heir. Anciently such an interest was not regarded as property at all (the feudal conception of estates in land being confined to the class of interests known as freeholds), but as a mere contract right, enforceable only against the lessor or owner of the land, and against him only by an action for damages. But in the course of time, partly as the result of statutes and partly through a growing recognition of the importance of leasehold interests, the lessee came to be protected by a variety of actions, of which the action of ejectment was the most important, whereby he might recover the land itself either from his lessor or from any other intruder. The right of the lessee thus became a true estate in the land, strictly analogous to the freehold estates previously recognized, but it was now too late to secure its recognition as inheritable real property. As the right of action for breach of contract, which was all that the lessee formerly had, passed to his executor, so the leasehold estate which developed out of that contract right has

continued to do to the present time. It is distinguished from other personal property by the phrase "chattel real."

This contract origin of the leasehold is responsible, also, for some of the advantages which it enjoys over the freehold. Not only may it be created and assigned with less difficulty and formality, as by parol or, at the most, by a simple writing, while a deed is requisite to the creation or transfer of a freehold; but it has always been capable of being created so as to take effect at a future time, which in the case of freeholds was not possible at the common law.

Technically the proper mode of creating an estate for years is by a lease, or demise, followed by the entry of the lessee. Any form of words showing the intention to create the relation of landlord and tenant will suffice. See ESTATE, FREEHOLD; LANDLORD AND TENANT; LEASE.

LEAST SQUARES, METHOD OF. An application of the theory of probabilities (q.v.) to the deduction of the most probable value from a number of observations, each of which is liable to certain accidental errors. The methods by which this is done may be understood from a single example. Let it be found that a given bar has, at the temperatures of 20°, 40°, 50°, and 60° C., respectively, the lengths 1000.22, 1000.65, 1000.90, and 1001.05 millimeters; and let it be required to ascertain the coefficient of linear expansion, i.e., the amount of linear expansion per degree of temperature. If l_0 denotes the length of the bar at a temperature of 0° C., c the coefficient of linear expansion, and l_t the length of the bar at t ° C., then $l_0 + t \cdot c = l_t$. Substituting respectively 20, 40, 50, and 60 for t , and the corresponding values of l_t , we get four equations, as follows:

- (1) $l_0 + 20c = 1000.22$
- (2) $l_0 + 40c = 1000.65$
- (3) $l_0 + 50c = 1000.90$
- (4) $l_0 + 60c = 1001.05$

Solving equations (1) and (2) for l_0 and c , we obtain $l_0 = 999.79$, and $c = 0.215$. But if these values of l_0 and c are then substituted in equations (3) and (4), we find, respectively, $l_{50} = 1000.87$, $l_{60} = 1001.08$, instead of the experimental figures 1000.90 and 1001.05. The difference between the 1000.87 and the 1000.90, — 0.03, is called the residual of equation (3), while + 0.03 is obviously the residual of equation (4).

In the same way we might solve equations (1) and (4) and obtain $l_0 = 999.80$, $c = 0.0208$, in which case the residuals of equations (2) and (3) would be + 0.02, + 0.06. Other combinations of the given equations would give other residuals, and the smaller the residuals the closer the probable approximation. It can be shown analytically and experimentally that in a series of observations affected by accidental errors, errors whose law of recurrence is such that in the long run they are as often positive as negative, the number of errors of a given magnitude is a function of that magnitude. This particular function is

$$f(x) = h\pi^{-1}e^{-x^2},$$

where h is a constant for all observations of a series, and π and e have their usual meanings. The distribution of residuals follows this law, which is represented graphically by the curve

$$y = h\pi^{-1}e^{-x^2}.$$

If $\sigma = 0$, $y = h\sigma^{-1}$, and therefore varies directly as h ; but as σ becomes very large, y becomes very small. That is, the number of errors of very small magnitude is relatively large, and the number of errors of very large magnitude is small. It has further been found that the sum of the squares of the residuals, Σx^2 , varies inversely as h , and hence, when h is largest, Σx^2 is smallest; in other words, that the most probable values of the unknowns are those which make Σx^2 a minimum. From this is derived the name *Method of Least Squares*.

For example, suppose a circumference, σ , bisected by a diameter, is measured and found to be c , and the two semicircumferences are also measured and found to be s_1 , s_2 , and we are required to find the most probable value of σ . The residuals are $c - \sigma$, $s_1 - \frac{1}{2}\sigma$, $s_2 - \frac{1}{2}\sigma$. Hence, assuming only accidental errors,
 $f(x) = (c - x)^2 + (s_1 - \frac{1}{2}x)^2 + (s_2 - \frac{1}{2}x)^2 = \text{a minimum,}$
 or $f'(x) = 2(x - c) + \frac{1}{2}x - s_1 + \frac{1}{2}x - s_2 = 0$,
 whence $x = \frac{1}{2}(2c + s_1 + s_2)$,
 the most probable value.

The publication of the method of least squares is due to Legendre (1805), who introduced it in his *Nouvelles méthodes pour la détermination des orbites des comètes*. In ignorance of Legendre's contribution, however, an Irish-American writer, Robert Adrain (q.v.), editor of the *Analyst* (1808) and professor of mathematics in Columbia College, first deduced the law. He gave two proofs, the second being essentially the same as Herschel's (1851). Gauss seems to have had the idea very early, and he gave the first proof which seems to have been known in Europe (the third after Adrain's), but this did not appear until 1809. To him is due much of the honor of placing the subject before the mathematical world, both as to the theory and its applications.

LEATHER (AS. *leþer*, OHG. *leder*, Ger. *Leder*, leather). The skin of an animal, dressed for use by some process which shall render its texture permanent in character. Untreated fresh skin is easily putrescible, dry skin is hard and horny and almost impenetrable to air. By converting a skin into leather, however, its nature is entirely changed and it is rendered practically imperishable, porous, and flexible. It differs from the untanned hide in having greater or less permeability to water and toughness and strength. The hide of an animal consists of three layers: the outer or epidermis, which has no blood vessels and is hard and horny, the inner true skin or corium, which is made up of gelatinous fibres; and the fatty under tissue in which the perspiratory and sebaceous glands are embedded. The inner layer or true skin, the corium, is the basis of leather, as the other portions are removed in the early processes of tanning; and the process of leather making consists of applying to this skin certain substances

which shall enter into combination with the gelatin in such a manner as to produce the desired characteristics of durability, penetrability, and flexibility. Three methods of accomplishing this have been practiced from very early times: *tanning*, in which the gelatin is combined with tannin or tannic acid, or, by a much later process, with chromium salts; *tawing*, in which the gelatin is combined with certain mineral salts, chiefly those of alumina; *chamoising*, in which the leather is combined with oil or fatty substances.

Historical Development. Probably the original process of curing skins was that of simply cleaning and drying. Then the use of smoke, sour milk, various oils, and the brains of the animals themselves, was found to improve the texture of the leather. Later it was discovered that certain astringent barks and vegetables effected permanent changes in the texture of skins and stopped decay. This knowledge was possessed by the ancient Egyptians, for engravings on their tombs depict the process of tanning. In China specimens of leather have been discovered in company with other relics that prove them to be over 3000 years old. The Romans used leather which they tanned with oil, alum, and bark. The earliest explorers of America found the Indians wearing skins prepared with buffalo dung, oil, and clay. No improvement in the general methods of preparing leather took place from the most primitive times until about 1790, when the use of lime, to loosen the hair, was introduced. By 1825 English tanners were attempting to introduce new methods by which the tanning process could be shortened. One of the pioneers in these experiments was John Burridge, the inventor of the barkometer, an instrument for determining the strength of tanning liquors.

Tanning Industry in the United States. The first tannery in America was built in Virginia in 1630. A few years later a second one was established in Lynn, Mass. The tanning industry was well represented among the early settlers of Massachusetts, for it is recorded that no fewer than 51 tanners had come over to the new Colony before 1650. There was great demand for their labors, for skins accumulated so rapidly that in 1640 it was found necessary to pass a law "that every hide and skin should be dried before it corrupts, and sent where they may be tanned and dressed." The tanning industry was also encouraged throughout the Colonies by many laws forbidding the exportation of untanned leather. Tanneries flourished everywhere, and by 1810 their annual output was \$20,000,000. See paragraph *Statistics*.

Manufacturing Processes. The hides of commerce are brought to the tanneries in four different forms: either they are simply "green" or "fresh" hides, direct from the slaughterhouses, or, in case they have been shipped from a long distance, as is the case with hides coming to the United States from South America or to England from India, Australia, and Africa, as well as South America, they are wet-salted, dry-salted, or simply dried. The preliminary process of preparing the hides for tanning differs somewhat with the condition in which they are received, salted and dried hides requiring much more thorough cleansing and softening than green hides. The process also differs somewhat in preparing sole leather, harness leather, and shoe leather. The first step is to soak the

skins or hides in water, to soften them, after which every vestige of adherent flesh is scraped from the inside. They are then laid in heaps for a short time and afterward hung in a heated room, by which means a slight putrefactive decomposition is started and the hair becomes so loose as to be easily detached. This process of unhairing, called "sweating," is mostly followed in America for making sole leathers, while the process of *liming* or loosening the roots by the milk of lime is used for dressed leather, but in Great Britain milk of lime is used for depilation of all leathers. The process may be hastened by use of sulphuric or other acid. Hides or skins intended for dressing purposes, as for shoes, upholstery, harness, or bookbinding, after the hair is taken off by the lime, have to be submitted to a process called *bating* for the purpose of reducing the swelling or thickening occasioned by the introduction of the lime and for cleansing the skin from grease and other impurities. This is effected by working the skin in a decoction of pigeon's or dog's dung and warm water. This process does something more than cleanse the leather; it effects a marked change in its texture, reducing it to an extremely flaccid condition. If the old method of tanning is followed, the hides after unhairing are placed in the tan pits, with layers of oak bark or other tanning materials between them, and when as many layers of hides and bark are arranged as the pit will hold, water is let in, and the hides are allowed to remain for an indefinite period to be acted on by the tanning material. Various means for shortening this process have been devised, such as forcing the tanning liquor through the skin by pressure, sewing the skins together into a bag in which the liquor is suspended, and simply substituting for the dry bark which was formerly used liquid infusions or extracts of tanning materials, which are gradually increased in concentration as the process advances. The last-named method, though the slowest, is found to produce the best leather, and the process of tanning is still a tedious one, consuming weeks or even months. The general method employed in American tanneries is described by Sadtler as follows:

"The tan house into which the cleansed and prepared hides or 'butts' now come is provided with rows of pits running in parallel lines, which are to contain the butts during their treatment with the tan liquor. The butts in most cases are first suspended in weak tanning infusions before they go into the first, or 'handler,' pits. The object of this is to insure the uniform absorption of tannin by the skins, before subjecting them to the rough usage of 'handling,' which in the early stages of the process is liable to cause injury to the delicate structure of the skin. During this suspension the skins should be in continuous agitation to cause the tannin to be taken up evenly. Both the suspension and the agitation are accomplished generally by mechanical means. From the suspenders the butts are transferred to the 'handlers,' where they are laid flat in the liquor. They are here treated with weak infusion of bark, commencing at about 15° to 20° by the barkometer, and are handled twice a day during the first two or three days. This may be done by taking them out, turning them over, and returning them to the same pit, or more generally by running them, fastened together, from one handler pit to another. The treatment of the butts in the handlers generally

occupies about six to eight weeks, by which time the coloring matter of the bark and the tannin should have 'struck' through about one-third of the substance of the skin. Many of the butts will have become covered, moreover, with a peculiar 'bloom' (ellagic acid) insoluble in water. They are now removed to the 'layers,' in which they receive the treatment of bark and 'ooze' or tan liquor in progressive stages until the tanning is complete. Here the butts are stratified with ground oak bark or valonia, which is spread between each butt to the depth of about one inch, and a thicker layer finally on top. The pit is then filled up with ooze, which varies in strength from about 35° barkometer at the beginning to 70° at the end of the treatment. For heavy tanning six to eight layers are required, the duration of each ranging from 10 days in the beginning to a month in the later stages. Each time the butts are raised they should be mopped on the grain to remove dirt and loose bloom."

Many materials besides oak bark are now used to make tanning infusions, and some of these, being stronger, have hastened the tanning process. Among the most important of these are valonia, the acorn of an evergreen oak found in Asia Minor and Greece, which contains three times as much tannin as the strongest oak bark; the sumach; the divi-divi and algarovilla, pods of South American trees closely allied to logwood; and the larch, spruce, pine, and hemlock barks. Besides this group there are the tanning materials derived from abnormal growths, caused by the sting of insects or other injuries, as galls (q.v.) and knoppers. The so-called "union" tannage is produced by a combination of oak and hemlock barks. Many of the tanning materials come into commerce at present in the form of manufactured extracts which can be readily and cheaply shipped to the tanneries wherever located. Liquid extracts such as hemlock and chestnut extracts frequently contain notable amounts of difficultly soluble sediments known as "phlobaphemes" or "reds," which are the anhydrides of the tannic acids. These should not be discarded, as they have notable tanning power and are gradually absorbed by the skins, going into solution and becoming effective tanning agents. Solid and pasty extracts such as those of quebracho, cutch, and gambier are dissolved for use with the aid of moderate heat.

Undressed leather, after it is tanned, needs simply to be rendered smooth and compact, which is accomplished by scouring and compressing the surface with stones, brushes, the "striking pin," and rollers, all of which processes are effected by machinery. Dressed leathers must, in addition, be "stuffed" with oils to increase their resistance to water and their flexibility; they must frequently be dyed or stained in black or colors and "grained." These processes are also performed by machinery. In 1860 a machine was invented for splitting leather to any desired degree of thinness. The practice previously was to shave the leather down, the shavings being wasted. The process of dressing tanned leather known as currying was formerly a separate industry, but is now carried on as a part of the general business of leather manufacture. A favorite oil used by curriers for stuffing leather is the degrass, or superfluous oil pressed from chamoised leather. The demand for this oil is so great that its manufacture has recently become a separate industry.

Chrome Tanning. The possibility of tanning by the use of chromium compounds, instead of the older tanning materials, was discovered as early as 1856 by the German Knapp, but the first process which attained commercial success was invented in 1884 by Augustus Schultz. The introduction of this process in Philadelphia caused it to become at once a great leather-manufacturing centre. Chrome tanning consumes only a few hours, as compared with weeks or months required by the older method, and it produces a leather which is extremely soft and pliable, of close texture, and thoroughly resistant to water. At the present time two-thirds of the glazed kid made in the United States is chrome-tanned, but the process has not been applied successfully to sole leather. The process consists in treating the skins at first with a weak solution of bichromate of potash, to which sufficient hydrochloric acid is added to liberate the chromic acid. Of course pickled skins may be used without the necessity of adding free acid. After the skins have taken up a bright-yellow color through their entire texture they are drained and transferred to a bath of hyposulphite of soda, to which hydrochloric acid is added to liberate sulphurous acid, which reduces the chromic acid to green chromic oxide. The sulphurous acid is at the same time oxidized to sulphuric acid, until the whole of the chromic acid is reduced. The leather so produced is of a pale-bluish-green color. The combination of the hide fibre, or corium, with the chromium oxide is apparently more stable than its combination with tannin and yields less to boiling water. The leather can also be dyed successfully if the dye is applied while the skin is still moist, but so great is its water-repellent character that, once dried, it cannot be wetted sufficiently to dye properly.

Tawing consists either in dressing the skins in antiseptic materials, so as to preserve them from decay, or treating them with salts that fasten upon the fibre and prevent them from agglutinating and so drying as a horny mass. By this operation, however, no chemical change is effected in the gelatin of the skin; hence scraps and other wastes of tawed leathers can be used in the manufacture of glue. The preliminary process of cleansing and depiling is performed as for skins that are to be tanned, except that the lime must be very thoroughly removed before the use of the aluminium salt. After thorough cleansing the pelts are steeped in a pit filled with lime and water, being taken out from time to time and drained on sloping benches. When removed finally from the lime pit, the skins are worked with the knife, to render them more supple, and are then put into the branning mixture. This consists of bran and water in the proportion of two pounds of bran to a gallon of water. From this mixture they are transferred to an alum and salt bath in a wooden tumbler or drum. For every 200 skins some 12 pounds of alum and $2\frac{1}{2}$ pounds of salt, with 12 gallons of water, are used. After remaining in this mixture about five minutes they undergo what is called pasting. The paste is a mixture of wheaten bran and sometimes flour and the yolk of eggs, which the leather almost completely absorbs. Lastly the skins are dried and examined and, if satisfactory, are dipped into pure water and worked or staked by pulling them backward and forward on what is called a stretching and softening iron. They are then allowed to "age"

for from one to three months and prepared for finishing. For this they are thoroughly wetted, which has the effect of removing superfluous alum and salt and much of the flour and egg. It becomes necessary therefore at this stage to "re-egg" the skins to give them proper body preparatory to dyeing or finishing.

For black glove leather these alum-tanned skins are given first an alkaline mordant (sometimes stale urine) and then dyed with logwood infusion applied by brushing over the skins several times. This color is fixed and darkened by a wash of sulphate of iron solution. Tanning by electricity has also been proposed, and several processes have been invented, but have not been prosecuted with any marked success.

Chamoising is effected by treating the skin with oil. After the skins have been thoroughly cleansed with lime, and then by a bran drench to remove the lime, they, while still wet, are oiled with fish, seal, or whale oil to which a slight amount of carbolic acid is sometimes added. The oil works into the skin, displaces all the water, and becomes united with the material, rendering its texture peculiarly soft and spongy. Wash leather or chamois leather is so prepared, and for this purpose the flesh halves of split sheepskin are chiefly used.

The skins which form the staple of leather manufacture are those of the ox, cow, calf, buffalo, horse, sheep, lamb, goat, kid, deer, dog, seal, hog, walrus, kangaroo, and alligator. The term *pelt* is applied to all skins before they are converted into leather. When simply made into leather in the state we find in shoe soles, it is called *rough leather*; but if in addition it is submitted to the process of currying, it is called *dressed leather*. *Hides* are the skins of large animals, as horses, cows, and oxen. The complete hides when rounded, with the cheeks, shank, etc., cut off, are called *butts*; the pieces cut off constitute the offal. *Skins* are all the lighter forms of leather, as sheep, goat, deer, including the skins of fur-bearing animals in which the fur is retained. *Kips* are the skins of yearlings and animals larger than calves. Alligator leather is chiefly used for small fancy articles. Only the skins of young alligators are used, and of these the backs are thrown away as too horny. Walrus and hippopotamus hides are tanned in considerable numbers for the use of cutlers and other workers in steel goods; buffing wheels are made of them, often an inch thick, which are of great importance in giving the polish to metals and horn goods. Hogskins are used for the manufacture of saddles and fancy articles. Dogskins are used for gloves. The "grain leather" of commerce is leather that has been made from the hides of neat cattle, split so thin by the splitting machine as to be suitable for the same uses as are goat, calf, and various other skins which it is made to imitate.

Morocco leather, formerly an article of import from the Barbary coast, is now prepared in the United States. Sheepskins are also used for it. It is always dyed on the outer or grain side with some color, and the leather dresser in finishing gives a peculiar ribbed or a roughly granulated surface to it by means of engraved boxwood balls which he works over the surface. Morocco has been largely superseded by glazed kid.

Russia leather is much valued for its aromatic odor, which it derives from the peculiar oil of the birch bark used in currying it. The fact that

this odor repels moths and other insects renders this leather particularly valuable for binding books; a few books bound in Russia leather being effective safeguards against insect enemies in a library. It is also said to destroy or prevent the vegetable evil called mildew, to which books are so very liable.

Japanned leather, varieties of which are known as *patent* and *enamel* leather, which is largely used for fancy work and for shoes, is said to

the skins are blackened again with a fluid black mixed with turpentine and hung up to dry again. After the skins have been allowed to settle, being laid in a pile for about a month's time, or longer if possible, the leather is tacked on to a frame and given a brush coat of varnish. A baking follows in an oven of moderate heat. The temperature is gradually raised and the baking continued three days. Exposure to the sun for 10 hours completes the process. American manufac-

have been made in America as early as 1818, by Seth Boyden, of Newark; but it is only within recent years that the American product has approached in excellence that made in Germany and France. The European method of manufacture was described substantially as follows in the *Twelfth United States Census, Bulletin on*

turers make patent leather from chrome-tanned skins. The product is quite different, as is also the process employed. The main point of difference is that in this enameled leather the application of the several varnish coats is made upon the grain side of the leather instead of upon the flesh side, as in the older patent leather.

All other animals ..	27,696	27,696		

* The total number taken off, from which this ratio is computed, was 19,908,402.

Successive coats of this mixture are applied, the skin being allowed to dry and the surface ground down with pumice stone after each coat. Then

6 to 10 hours. In the modern process the leather is softer, more flexible, and takes a less brilliant polish than that made from bark-tanned leather,

but it is much less likely to crack and is more suitable for shoes than the brittle and inflexible leather made in the older way.

Cordovan is made from horsehide and is so called, because it was first successfully tanned in Cordova, Spain. Most of the hides of commerce are taken from the wild horses of South America. A portion of the skins, oval in shape, taken over the rump, about 3 feet long and half as wide, is all that is used for leather. Its distinctive quality is that it is nearly waterproof.

Statistics. According to the census of manufactures for 1909 there were in the United States 5728 establishments devoted to various branches of leather manufacture. The annual value of the product of all branches of the industry, including finished product, was given as \$992,713,322. Dealing specifically with the leather industry proper, which includes the manufacture of leather from hides and skins of all kinds, domestic and imported, by various methods of tanning, such as the oak, hemlock, and chrome or other mechanical processes, and the currying and finishing of leather to be used for various manufacturing purposes, the census reports that in 1909 there were in the United States 919 establishments giving employment on an average to 62,202 wage earners and paying annually in wages \$32,102,845, with an annual value of products amounting to \$327,874,187 and a capital amounting to \$332,726,952. The growth of this industry is shown by the first table on page 683, while the other tables show in detail the product of the leather industry and also the materials used and the sources of the various hides and skins, as well as the statistics for the entire industry, including not only the manufacture of leather for use in the various industries but the finished products.

MATERIALS USED IN THE AMERICAN LEATHER INDUSTRY (THIRTEENTH U. S. CENSUS)

MATERIAL	1909	1904	1899
Total cost . . .	\$248,278,933	\$191,179,073	\$155,000,004
Cattle hides			
Number	18,360,415	17,581,613	15,838,862
Cost	\$119,410,767	\$89,126,593	\$77,784,760

* Not reported separately.

† Includes wool to the value of \$2,476,193, reported as a subsidiary product of the industry. In addition, wool valued at \$11,597 was reported by establishments tanning leather for their own use in the manufacture of leather gloves and mittens and other leather goods.

In 1909 the imports of leather and tanned skins into the United States amounted in value to \$5,313,137, an amount that increased by 1914 to \$13,810,347. In the fiscal year 1909 the im-

duty, while duty was paid on imports valued at \$23,795,602. In 1914, when hides were being admitted free of duty, the imports were valued at \$120,280,781. The exports of leather and skins from the United States in 1909 were valued at \$30,413,099, an amount that increased to \$42,384,190 by 1913 but fell to \$36,668,869 in 1914. The exports of manufactures of leather in 1909 were valued at \$12,561,696 and increased in 1914 to \$20,897,392, making a total value of leather and leather manufactures exported equal to \$42,974,795 in 1909 and \$57,566,261 in 1914. The accompanying table shows, for the fiscal years 1909, 1904, and 1899 respectively, the value of the exports and imports of the different classes of leather as distinguished by the United States Bureau of Foreign and Domestic Commerce. It will be noted that the total value of exports showed a very considerable increase during the period covered, which, however, was partly attributable to increase in prices.

CLASS	Year ending June 30		
	1910	1905	1900
EXPORTS			
Total value	\$21,797,157	\$21,797,157	\$21,797,157
Sole leather	6,433,303	6,433,303	6,433,303

LEATHERBACK, LEATHERY TURTLE, or LUTH. A large oceanic turtle (*Sphargis*, or *Dermochelys coriacea*) distinguished prominently by having the body incased by a leathery integument instead of a horny shell. This remarkable turtle has been observed in all the tropical seas, but is everywhere rare and is probably approaching extinction. It is more often seen in the Atlantic than elsewhere and has been known to stray northward to Long Island and the coast of France. It exceeds all other turtles in size. The British Museum contains a specimen 6½ feet long, the shell being 4 feet long. Such a specimen, it is believed, would weigh from 700 to 1000 pounds, and Agassiz relates that he saw some weighing more than a ton. The color is brown, more or less marked with yellow in youth. The head is very turtle-like, the tail has been almost lost. The fore flippers are broad and nearly as long as the body, while the hinder ones are broad, stout paddles, giving great swimming power, so that a dozen men have found it difficult to drag a hooked specimen up on a beach. This power is an adaptation to the almost continuous pelagic life led by the animal, which feeds principally on fish, crustaceans, mollusks, jellyfishes, and similar marine prey caught in the open sea or about submerged reefs. Its flesh is not of good taste, is rarely eaten, and is regarded by most persons as unwholesome. Its breeding habits are similar to those of other chelonians. Rather later in the season than the true turtles, it seeks a sandy shore or islet and buries in the sand a great number of eggs. The young turtles seek the water as soon as hatched, but few survive to reach an age and size that make them safe against most enemies.

Structure and Affinities. These turtles differ widely from ordinary chelonians, and competent herpetologists differ as to their history and probable line of development. The factors in the discussion and the varying views are briefly presented by Hans Gadow in vol. viii of *The Cambridge Natural History* (London, 1901). Gadow himself, supported by Boulenger, Cope, and others, believes *Sphargis* to be the sole remnant of a primitive group quite independent of the other chelonians and constituting with its scantily known fossil ancestors an order, *Athecae*, opposed to all remaining turtles (order *Thecophora*). (See **TURTLE**.) The opposite view is that the genus is a specialized offshoot from the typical *Chelonia* and separable only as a family. The structure of this turtle is very peculiar, especially as to its shell. This is not formed as in other turtles by an outgrowth of the spine or backbone, for it is nowhere in contact with the internal skeleton, except by a nuchal bone; but is a real integument, continuous all around the body and forming a jacket. This jacket consists of a dense leathery skin, in which are deeply embedded a mosaic of many hundreds of little polygonal bony plates fitted closely together and at intervals rising into 12 longitudinal ridges—seven dorsal and five lateral and ventral. In young specimens the entire shell is soft, but ossification proceeds with growth, and when mature the integument is almost rigid, though thin. Such an integument more closely resembles that of a crocodile than that of a true turtle, but *Sphargis* has a plastron and neural plate.

Bibliography. Hans Gadow (above cited); G. A. Boulenger, *Catalogue of Chelonians in the*

British Museum (London, 1889); E. C. Case, in *Journal of Morphology*, vol. xv (ib., 1897); O. P. Hay, in *American Naturalist*, vol. xxxii (Philadelphia, 1898); R. L. Ditmars, *The Reptile Book* (New York, 1907); S. W. Williston, *Water Reptiles of the Past and Present* (Chicago, 1914).

LEATHER BEETLE. A dermestid beetle (*Dermestes vulpinus*), allied to the bacon beetle (q.v.), whose grubs damage leather, even when made up into shoes, harness, etc.; they also damage silkworm cocoons, dried fish, and other dead animal matter. Its larvæ feed voraciously, molt six times, and reach a full growth, under favorable circumstances, in from two to three weeks. They are likely to crawl away from their food when ready to pupate, and make cells in wood or any near-by substance. The pupa stage lasts about two weeks. The best remedy is fumigation with bisulphide of carbon or hydrocyanic-acid gas.

LEATHER CLOTH. A coated or enameled textile fabric, intended to possess some of the good qualities of leather without being so costly. There are forms of leather cloth, however, which are in fact leather and not cloth and consist of leather parings and shavings reduced to a pulpy mass and molded to any desired form. See ENAMELED CLOTH

LEATH'ERFISH'. A filefish (q.v.).

LEATHER FLOWER. A North American plant. See CLEMATIS.

LEATH'ERJACK'ET. A bluish and silvery carangoid fish (*Oligophites saurus*), numerous in the tropical seas on both sides of America, but not valued as food. A kindred species, *Oligophites saliens*, is called sauteur, and both have many local names indicating swiftness and activity. See Plate of HORSE MACKEREL.

LEATH'ERSTOCK'ING. The most familiar of the names given to Natty Bumppo, the hero of Cooper's pioneer romances, hence called the *Leatherstocking Tales*.

LEATHER TURTLE (so called from its coriaceous shell). 1. The leatherback (q.v.). 2. A soft-shelled turtle, especially those of the American genera *Trionyx* and *Amyda*. See SOFT-SHELLED TURTLE.

LEATH'ERWOOD' (so called from the toughness of the bark), MOOSEWOOD, or WICOPY (*Dirca palustris*). A deciduous treelike shrub from 3 to 6 feet high, native of North America, which belongs to the family Thymeleaceæ. The wood is white, soft, and very brittle. The bark is exceedingly tough and has been used for ropes, baskets, etc. The leaves are obovate oblong; the flowers, which appear before the leaves, yellow. The shrub, which abounds in rich moist woods from New Brunswick to Minnesota and south to the Gulf of Mexico, is used to some extent in ornamental gardening.

LEATHES, lēthz, STANLEY (1830-1900). An English theologian and Hebraist. He was born at Ellesborough, Buckingham, studied at Jesus College, Cambridge, and in 1863 was appointed to the chair of Hebrew in King's College, London. From 1870 to 1885 he was a member of the Old Testament Revision Committee. His skill as a Hebraist is to be seen in *A Short Practical Hebrew Grammar* (1869). Leathes was delegate to the Evangelical Alliance in New York in 1873. The last dozen years of his life were spent at Much Hadham, Hertford. He is best known for his lectures: *The Witness of the Old Testament to Christ* (1868), *The Witness*

of Saint Paul to Christ (1869), *The Witness of Saint John to Christ* (1870), being Boyle lectures; the Hulsean lectures, *The Gospel its own Witness* (1874); and in the same year the Bampton lectures, *The Religion of the Christ*. He also wrote *The Law in the Prophets* (1891) and *Testimony of the Earlier Prophetic Writers to the Primal Religion of Israel* (1898).

LEAVE AND LICENSE. A phrase in English law to denote that leave or permission was given to do some act complained of. It is a good plea to an action of tort, provided the act committed is not itself a crime, upon the principle that a person consenting to a harmful act, as a trespass or an assault, cannot afterward be heard to say that his legal right to immunity from such treatment has been violated. This principle has been embodied in a familiar legal maxim, *volenti non fit injuria*. See LICENSE.

LEAVEN, lēv'en (OF., Fr. *levain*, from Lat. *levamen*, raiser, from *levare*, from *levis*, light; connected with Lith. *lengvus*, Gk. *ελαφύς*, *elachys*, Skt. *laghu*, *raghu*, light). Sour dough, or dough saved from a previous baking in which fermentation is going on, and which, owing to the presence and rapid growth of the yeast plant, either wild or cultivated, with perhaps always other microorganisms also, quickly communicates its character to fresh dough with which it is mixed, causing the process of fermentation to take place in it so that it will "rise" and yield a porous bread. The use of leaven in baking dates from a very remote antiquity; the employment of yeast is more recent. See YEAST; BREAD.

LEAVENWORTH, lēv'en-würth. A city and the county seat of Leavenworth Co., Kans., 26 miles by rail northwest of Kansas City, on the Missouri River and on the Atchison, Topeka, and Santa Fe, the Missouri Pacific, the Union Pacific, the Chicago, Rock Island, and Pacific, the Chicago, Burlington, and Quincy, the Chicago Great Western, and other railroads (Map: Kansas, G 4). With its excellent transportation facilities it is an important commercial centre, its wholesale trade being very large. There are also coal-mining interests, large machine shops, a packing house, and extensive manufactures, including vitrified and building bricks, stoves, furniture, milling machinery, flour, soap, brooms, washing machines, wagons, etc. The city has a public library and, among noteworthy structures, the cathedral of the Immaculate Conception, county courthouse, and Federal building. In the suburbs are the United States and State penitentiaries; the National Military Home for disabled volunteers, with quarters for 3000 men, and occupying 720 acres of beautifully laid-out grounds; and Fort Leavenworth (q.v.). The last, one of the most important military posts of the West, has a noted infantry and cavalry school, a national military prison, and a national cemetery in which are 3221 graves, 1445 of unknown dead. There are also in the city several hospitals and asylums, Association Park, and two fine railroad and wagon bridges cross the river at this point. An object of particular interest is the immense bronze statue of Gen. U. S. Grant. Leavenworth adopted the commission form of government in 1909. Leavenworth was founded in 1854 by a party of so-called Sons of the South, and throughout the struggle between the antislavery and proslavery parties for the control of Kansas it was a centre of proslavery influence. In 1855 it was chartered as a city of the first class.

Pop., 1890, 19,768; 1900, 20,735; 1910, 19,363. Consult Burke and Rock, *History of Leavenworth* (Leavenworth, 1880).

LEAVENWORTH, ELIAS WARNER (1803-87). An American lawyer. He was born in Canaan, N. Y., and graduated at Yale in 1824. He then studied law in the office of William Cullen Bryant at Great Barrington, Mass., and in the law school at Litchfield, Conn.; was admitted to the bar in 1827; removed to Syracuse, N. Y., in the same year and there practiced his profession. He was twice mayor of Syracuse (1849, 1859); was Secretary of State of New York in 1854-55; was president of the Board of Quarantine Commissioners in 1860 and of the commission appointed to choose a location for the State asylum for the blind in 1865; and was a member of the State Constitutional Convention of 1872. In 1861 he was appointed by President Lincoln commissioner under the convention with New Granada, and from 1875 to 1877 he was a member of Congress. He published a *Genealogy of the Leavenworth Family in the United States* (1873).

LEAVENWORTH, FORT. See FORT LEAVENWORTH.

LEAVES. See LEAF.

LEAVES OF GRASS. A collection of poems by Walt Whitman (1855).

LEAVITT, lēv'it, ERASMUS DARWIN (1836-1916). An American mechanical engineer, born at Lowell, Mass. After receiving a common-school education he was an apprentice for three years in the shops of the Lowell Manufacturing Company and for one year with Corliss and Nightingale, of Providence, R. I. He was an assistant foreman at the City Point Works, South Boston (1858-59), chief draftsman of Thurston, Gardner, and Company, Providence (1860-61), and assistant engineer in the United States Navy (1861-67). He was afterward consulting engineer for the cities of Boston and Louisville, for Henry R. Worthington in New York, and for the Calumet and Hecla Mining Company from 1874 to 1904, when he retired. In 1883 he was president of the American Society of Mechanical Engineers.

LEAVITT, JOSHUA (1794-1873). An American religious journalist. He was born in Heath, Mass., Sept. 8, 1794, graduated at Yale College in 1814, was admitted to the bar in Northampton, Mass., 1819, and practiced for a time in Heath, Mass., and Putney, Vt. He graduated at the Yale Divinity School in 1825. About 1830, for the promotion of revivals of religion, many pastors adopted what were then called "new measures," such as the employment of evangelists, the holding of protracted meetings, inquiry meetings, etc. The New York *Evangelist* was established to promote revivals and defend the "new measures," and from 1831 to 1837 Dr. Leavitt was its editor. During this period the antislavery agitation had its beginnings, and from the first it enlisted the warm support of Dr. Leavitt, who made the *Evangelist* a powerful agent for its promotion. When the American Antislavery Society was organized in 1833, he became one of its most active and influential members. From 1837 to 1840 he was the editor of the society's weekly organ, the *Emancipator*, and a member of the executive committee. When the Abolitionists divided in 1840, he went with the new organization, and thenceforth his antislavery efforts were mainly confined to the political arena. He was an active promoter of the

Liberty and the Free-Soil parties. In 1848 he became office editor of the *Independent*, retaining a connection therewith to the day of his death. He was active in many political and social reforms. About 1834 he compiled and published *The Christian Lyre*, a work containing the great body of the hymns and tunes used in the revivals of that day. He died in Brooklyn, Jan. 16, 1873.

LEAVITT, MARY GREENLEAF (CLEMENT) (1830-1912). An American temperance worker and lecturer, born at Hopkinton, N. H. After graduating from the State Normal School at West Newton, Mass., in 1851, she taught until 1857, when she married Thomas H. Leavitt. In 1867 she established a private school. She helped to organize the Boston Woman's Christian Temperance Union, became a member of the executive board of the State organization, and later was lecturer for the national organization. From 1883 to 1891 she served as secretary of the World's Woman's Christian Temperance Union, organizing branches of the union in Europe, Asia, Australia, Africa, and in many islands. After 1891 she was honorary life president of the World's Union. She wrote many tracts on temperance.

LEBADEIA, lēb'a-dē'yā. See LIVADIA.

LEB'ANON. A city in St. Clair Co., Ill., 24 miles east of St. Louis, Mo., on the Baltimore and Ohio Southwestern Railroad (Map: Illinois, E 8). It has a large flourishing mill with elevators, a coal mine, soda-water factory, brewery, and cigar factories. McKendree College (Methodist Episcopal) was founded here in 1828. With its elevated situation, healthful climate, natural beauty, and the possession of fine mineral springs, the city is one of the popular residential suburbs and summer resorts near St. Louis. Lebanon was laid out in 1825, incorporated as a village in 1857, and chartered as a city in 1874. There is a municipal plant. Pop., 1900, 1812; 1910, 1,107.

LEBANON. A city and the county seat of Boone Co., Ind., 28 miles northwest of Indianapolis, on the Cleveland, Cincinnati, Chicago, and St. Louis and the Central Indiana railroads (Map: Indiana, E 4). It has saw mills, chair and kitchen-cabinet factories, a condensed-milk plant, cream-separator factory, grain elevators, etc. The city contains a Carnegie library. Lebanon, settled in 1824, is governed under a charter of 1875 which provides for a mayor, elected every four years, and a unicameral council. The city owns and operates its water works. Pop., 1900, 4465; 1910, 5474.

LEBANON. A city and the county seat of Marion Co., Ky., 67 miles southeast of Louisville, on the Louisville and Nashville Railroad (Map: Kentucky, E 4). It has a splendid high school and St. Augustine's Academy. In the vicinity are a national cemetery and Loretto Academy. The principal industries are farming, stock raising, and manufactures of whisky, flour, meal, wheels, hardwood flooring, carriages and wagons, furniture, etc. There are also large tobacco warehouses. The water works are owned by the municipality. Pop., 1900, 3043; 1910, 3077.

LEBANON. A city and the county seat of Laclede Co., Mo., 57 miles northeast of Springfield, on the St. Louis and San Francisco Railroad (Map: Missouri, D 4). It is a health resort and has a fine courthouse and high-school building. The centre of an agricultural, fruit-growing, stock-raising, and dairying district,

Lebanon carries on a considerable trade and manufactures ice, flour, lumber, bricks, machine-shop products, barrels, etc. It has also a large tomato-canning establishment. The water works and electric-light plant are owned by the city. Pop., 1900, 2125; 1910, 2430.

LEBANON. A town and one of the county seats of Grafton Co., N. H., 65 miles by rail northwest of Concord, on the Mascoma and Connecticut rivers and on the Boston and Maine Railroad (Map: New Hampshire, E 6). Good water power, supplied by the Mascoma River, has aided the development of the town as a manufacturing centre. It is the seat of an extensive woolen industry and has manufactures of wood and iron working machinery, overalls and mackinaws, watchmakers' tools, rakes, snow shovels, scythes, doors, sash and blinds, knitted underwear, electric motors, excelsior, boxes, etc. There are also saw and grist mills, a large brickyard, and granite works. There is a public library here. The government is administered by town meetings. Lebanon, named after Lebanon, Conn., was chartered July 4, 1761, and was settled in 1762. Pop., 1900, 4965; 1910, 5718. Consult Patterson, *Oration in Commemoration of the One Hundredth Anniversary of Lebanon* (Boston, 1862), and C. A. Downs, *History of Lebanon, New Hampshire* (Concord, 1908).

LEBANON. A village and the county seat of Warren Co., Ohio, 30 miles northeast of Cincinnati, on the Cincinnati, Lebanon, and Northern and the Dayton, Lebanon, and Cincinnati railroads (Map: Ohio, B 7). It is situated in a rich agricultural region, has three corn-canning establishments, bridge-building works, and a shoe factory, contains a Carnegie library, a fine courthouse building, and an orphans' home, and is the seat of Lebanon University (1855). There are municipal water works, electric-light and gas plants. Lebanon was laid out in 1802. Pop., 1900, 2867; 1910, 2698.

LEBANON. A city and the county seat of Lebanon Co., Pa., 26 miles east of Harrisburg, on the Philadelphia and Reading, the Cornwall, and the Cornwall and Lebanon railroads (Map: Pennsylvania, J 6). It is in the Lebanon valley between the Blue and South mountains, a vicinity in which there is an abundance of brownstone, limestone, and brick clay; and it is within 5 miles of the Cornwall iron mines, a deposit of magnetite, covering an area of about 104 acres and having produced since its discovery 16,000,000 tons of ore, yielding 48 per cent of iron. The principal industries are iron mining, quarrying, brickmaking, and the manufacture of silk, machinery, bolts and nuts, boilers, chains, stoves, cigars, and organs. The ironworks, rolling mills, and furnaces are extensive; the nut and bolt plant ranks among the largest in the world; and the chainworks produce some of the most massive chains in use. There are four libraries and a fine courthouse in the city. Lebanon was laid out in 1753, having been settled some 10 years earlier; was incorporated in 1820; received a city charter in 1885; has adopted the commission form of government, consisting of four councilmen and a mayor; and owns and operates its water works. Pop., 1900, 17,628; 1910, 19,240; 1914 (U. S. est.), 19,926.

LEBANON. A city and the county seat of Wilson Co., Tenn., 31 miles east of Nashville, on the Nashville, Chattanooga, and St. Louis and the Tennessee Central railroads (Map: Ten-

nessee, D 2). It is the seat of Cumberland University (Cumberland Presbyterian), opened in 1842, of Castle Heights Training School, and of Lebanon College, for young ladies. The city controls a considerable trade in the products of the surrounding farming country and has some manufactures, particularly of cedar pencils. The water works and electric-light plant are owned by the city. Lebanon has adopted the commission form of government. Pop., 1900, 1956; 1910, 3659.

LEBANON, CEDARS OF. See CEDAR

LEBANON, MOUNT (Lat. *Libanus*, Ar. *Jebel Libnān*, White Mountains). The western and higher of the two mountain chains of Syria. The eastern is known as Anti-Libanus (q.v.) or Anti-Lebanon, Ar. *Jebel el-Sharki* (Eastern Mountains). Between the two is the table-land of el-Bika'a, called by the Greeks Cœle-Syria (hollow Syria). The Lebanon chain begins at the stream called Nahr el-Kebir north of Tripoli and extends southward parallel to the coast, a distance of not quite 100 miles to the point where the Litany breaks through on its way to the sea, not far from Tyre. Thence the chain is continued by the hills of Palestine—the mountains of Naphtali, Ephraim, and Judæa of the Bible. The average height is about 7000 feet, the highest peaks are Dahr el-Kodib (10,050 feet), el-Miskiyeh (10,037 feet), and Jebel Makmal (10,013 feet). The eastern slope is abrupt and barren; the western more gradual. Several spurs strike off across the strip of coast and end at the sea in bold promontories. The formation is limestone, sandstone, and basalt. Deep ravines and abrupt precipices are a feature of the landscape, and the general appearance is barren and desolate. The mountains, once well wooded, are now quite bare. Of the famous cedars (see CEDAR for illustration) but a few groves remain. Iron and coal are found, also red amber and asphalt. In winter the snowfall is great, and the snow lasts on the summits for six months; in the ravines it is found the year round and is carried to Beirut and other cities in the heat of summer. Two important rivers rise in the mountains and flow through the Bika'a before turning westward to the sea, the Litany (Leontes) flowing southward and el-Asi (Orontes) flowing to the north. Numerous streams water the western slopes, and here and in the valleys the soil is fruitful; orchards, vineyards, olive and mulberry plantations, and fields of wheat and barley abound. The population of the Sanjak of Lebanon, according to the census of 1896, was then 399,530, of whom 30,422 were Moslems, 229,680 Maronites, 34,472 United Greeks, 54,208 Orthodox Greeks, 49,812 Druses, and a few hundred Protestants. Since then, however, the population has increased somewhat, in spite of emigration. The chief occupation is the rearing of silkworms, and great quantities of raw silk are exported to Italy and France; some silk manufacture is also carried on in the villages, and there are several factories established by foreign firms. The carriage road over the Lebanon from Beirut to Damascus is now supplanted by a narrow-gauge railway, opened in 1895. About 20 miles of it are cogged. The mountains do not contain many ancient remains. There are some early anchorites' caves and rock tombs. Since the massacres of the Christians in 1860 and the consequent French intervention (see DRUSES) the Sanjak of Lebanon has had a Christian governor under the protection of the Powers. The people are

markedly superior to other inhabitants of Syria. Consult, besides the standard works on Palestine and Syria, such as Robinson, Buhl, and George Adam Smith: Oscar Fraas, *Drei Monate im Libanon* (Stuttgart, 1876); Baedeker, *Palestine and Syria* (5th ed., Leipzig, 1912); F. J. Bliss, *The Religions of Modern Syria and Palestine* (New York, 1912).

LEBANON SPRINGS. A village of New York. See NEW LEBANON.

LEBANON VALLEY COLLEGE. A coeducational college at Annville, Pa., 20 miles from Harrisburg, founded in 1866, and under the control of the United Brethren. The college plant consists of seven buildings, a large campus, and an athletic field. The institution comprises five departments: a college, offering five groups of studies leading to the degree of B.A., and preparatory, music, oratory, and art departments. In 1914-15 the total attendance was 360, including 220 collegiate students, with 25 instructors. The library contained 10,000 volumes. The value of the buildings of the college and grounds was \$293,000, the endowment \$75,000, the gross income \$52,000, and the total value of college property \$402,263. The president in 1914 was Rev. George D. Gossard.

LE BARGY, le bār'zhé', CHARLES GUSTAVE AUGUSTE (1858-). A French actor. He was born at La Chapelle, studied for the stage at the Conservatoire, and in 1880 made his first appearance at the Comédie Française, where he was a member of the company from 1887 to 1910. He played also at the Royalty Theatre, London, in 1907. He became Chevalier of the Legion of Honor, and a professor at the Conservatoire in 1896. The plays in which he gained his reputation include: *L'Etrangère*, *Hernani*, *Les ténailles*, *Patrie*, *Raymonde*, *L'Enigme*, *Margot*, *Le dédale*, *Le duel*, *Le demi-monde*, *Connaissez-moi*, *Après moi*, *Le respect de l'amour*.

LE BAS, le bâ, PHILIPPE (1794-1860). A French classical archaeologist and historian, born in Paris. In 1822-27 he had charge of the education of Louis Napoleon, afterward Napoleon III. Subsequently he was professor of Greek at the Lyceum and lecturer at the Normal School. In 1842 he was sent by the government on an archaeological expedition to Greece and Asia Minor; he collected more than 450 drawings of ancient monuments and more than 5000 inscriptions. He was elected to the Institute in 1838. His works include *Voyage archéologique en Grèce et en Asie Mineure* (1847-68), completed by Waddington (q.v.), and *Explication des inscriptions grecques et latines recueillies en Grèce* (1835). Consult J. E. Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

LEBBÆUS. See THADDEUS.

LEBEAU, le-bô', JEAN LOUIS JOSEPH (1794-1865). A Belgian statesman. He was born at Huy; studied and practiced law at Liège; and through the Liberal organ, *Mathieu Laensbergh* (later *La Politique*), which he founded in 1824, brought about a union of the Liberals and Clericals. This union, by its opposition to the ministry, started the revolution which resulted in the separation from Holland. Under Leopold he was Minister of Justice (1832-34), Governor of Namur, Ambassador to the German Confederation in 1839, and Minister of Foreign Affairs (1840-41). For more than 30 years he was a member of the House of Deputies, where he became a leader of the Liberals and a strong op-

ponent of the Clerical party. He resigned in 1864. His *Souvenirs personnels* were edited by Freson (Brussels, 1883).

LEBEL, le-bél', NICOLAS (1835-91). A French officer and inventor. He was born near Angers, entered the military school of Saint-Cyr in 1855, and took part as captain in the campaign of 1870 with the Army of the North. Later he was appointed director of the artillery school at Tours and in 1883 of that of Châlons, where he began to experiment on firearms. As a result he was commissioned to secure a new gun for the infantry. He invented a weapon of small calibre which, after being perfected by others, was adopted by the French army in 1886. In 1887 he was colonel of a regiment in Sedan, but illness forced him to retire.

LEBENSOHN, lä'bén-sôn, ABRAHAM BÄR (1789-1878). A Hebrew poet and grammarian, born at Vilna. He was sent to a Hebrew school at three, studied the Talmud at seven, and took up the Kabbalah soon after. According to the custom of the time, he was married very early—at 13. Too liberal to become a rabbi, he for many years taught children Hebrew. He then went into the brokerage business. From 1848 to 1864 he was connected with the Vilna Rabbinical School, resigning only when failing health made it necessary. Soon after this he devoted himself to poetry. His first collection of verse, *Poems in the Sacred Tongue* (3 vols., 1842-70), marked an epoch in New-Hebrew literature. It was everywhere greeted with great enthusiasm, and its author was surnamed the Father of Hebrew Poetry. Lebensohn soon came to be regarded as an exponent of a new Judaism, and in 1846 he presented to the celebrated Sir Moses Montefiore, then visiting Russia in behalf of the Jews, a written statement on the Jewish question, declaring the Jews blameworthy for their ignorance, deficiency in handicrafts, premature marriages, and, curiously enough, extravagance. These views he embodied in his allegorical drama, *Truth and Faith* (1867), the fundamental purpose of which was to harmonize science and religion on a rationalistic plane. Among his other works, mention must be made of his edition of Bensew's *Hebrew Grammar* (1874) and his collaboration on the 17-volume edition of the Bible (completed in 1853) with a German translation intended to familiarize students with that language, then the only approach to Western culture available to Russian Jews.

LEBENSOHN, MIOAH JOSEPH (1828-52), also known as MIKAL. A Russian Hebrew poet, the son of Abraham Bär Lebensohn. He was born at Vilna and received a good modern education—an advantage he enjoyed over all his contemporaries. After mastering Hebrew as a living tongue, he made a thorough study of German literature, rounding out his education by a course in philosophy at Berlin, under Schelling. Beginning verse making at the age of 12, he produced his first original poem at 16. When his translation of Schiller's version of two books of the *Æneid*, *Destruction of Troy*, appeared (1849), he was generally hailed as a new poet. Then came his collection of poems, *Shire Bat-Ziyon* (*Songs of the Daughter of Zion*, 1851; Ger. trans., 1859), generally considered a masterpiece. When his second volume of verse, *Kinnor Bat-Ziyon* (*The Harp of the Daughter of Zion*) was published, the young poet had already died of consumption. A complete edition of his works was brought out in 1895. Translations

have appeared in French, Russian, and German. Lebensohn's poetry excels even his father's in pathos, and it is an improvement in diction. He was the first Hebrew poet to apply the rules of modern prosody. Both his choice of subjects and his treatment were original and happy, while his melodious verse, his superb lyricism, and his poetic imagery have never been surpassed in Hebrew poetry.

LEBERT, la'bért, HERMANN (1813-78). A German physician. He was born at Breslau, was educated at Berlin, Zurich, and Paris, and in 1836 began to practice at Bex in Switzerland. The winters of 1842-45 he spent in Paris in pathological research, especially microscopical, and published the results in *Physiologie pathologique* (1845). In 1846 he undertook a zoölogical excursion in Switzerland. He settled in Paris in 1847 and stayed there until 1852, when he went to Zurich as clinical professor of the university and director of the hospital there. In 1859 he went to Breslau in the same capacity. He was one of the first to recognize and utilize the importance of histology for pathology. He made special studies of tuberculosis, cancer, and scrofula. His writings include: *Traité pratique des maladies scrofuleuses et tuberculeuses* (1849) and *des maladies cancéreuses* (1851); *Traité d'anatomie pathologique générale et spéciale* (1855-60); *Allgemeine Pathologie und Therapie* (2d ed., 1876); *Klinik der Brustkrankheiten* (1873-74); *Krankheiten des Magens* (1878).

LEBERT, SIEGMUND (1822-84). A German music teacher, born at Ludwigsburg. After studying music at Prague he settled in Munich, where he established himself as a pianist and teacher. In 1856 he founded, in conjunction with Stark and others, the Stuttgart Conservatory. In 1873 he received the honorary degree of Ph.D. from the University of Tübingen. He published, with Stark, *Grosse Klavierschule*, which was translated into Italian, English, French, and Russian (rev. by Max Pauer, 1904), an edition of Clementi's *Gradus ad Parnassum*, and an instructive edition of pianoforte classics. He died at Stuttgart.

LEBID IBN RABIA. See LABID IBN RABIA.

LEBLANC, GEORGETTE. See MAETERLINCK, GEORGETTE LEBLANC.

LEBLANC, le-blän', MAURICE (1864-). A French novelist. His sister, Georgette Leblanc, married Maurice Maeterlinck (for both, see MAETERLINCK). He early wrote a number of novels which, although interesting enough and for the most part well written, made no great impression. Beginning to write detective stories about 1906, he at once became well known. His Arsène Lupin stories supplanted the older detective stories of Emile Gaboriau, his gentleman thief Arsène Lupin quite overshadowing the Gaboriau detective Lecoq. These stories of Leblanc are comparable to Conan Doyle's Sherlock Holmes volumes in the gripping interest of well-worked-out and dramatically developed adventures. Leblanc was created Knight of the Legion of Honor. All of his Arsène Lupin stories have been put into English, a number of them by Alexander Teixeira de Mattos. He wrote: *Une femme* (1893); *Ceux qui souffrent* (1894); *L'Œuvre de la mort* (1896); *Les heures de mystère* (1896); *Arnette et Claude* (1897); *Les lèvres jointes* (1899); *Enthousiasme* (1901); *Gueule-rouge-80 chevaux* (1904); *Arsène Lupin* (1907); *Arsène Lupin contre Sherlock Holmes* (1908); *L'Aiguille creuse* (1909);

Nouvelles aventures d'Arsène Lupin. (1910); *La Frontière* (1911); *Le bouchon de cristal* (1912); *La confession d'Arsène Lupin* (1913).

LE BLANC, le blän', NICOLAS (1742-1806). A French physician, the inventor of a celebrated process for making soda from common salt. He was born at Issoudun, studied medicine and chemistry, and acted as surgeon to Philippe Egalité, the Duke of Orléans. In the eighteenth century most of the soda needed in the manufacture of glass and soap was obtained from *barilla*, a north-Spanish sea plant, the ashes of which contain a considerable percentage of soda. But during the second half of the century the supply of soda from this source had become insufficient, and in 1775 the French Academy offered a prize of 2500 livres for a method of making soda artificially from common salt. In 1789 Méthérie suggested changing common salt (sodium chloride) into sodium sulphate by means of sulphuric acid and heating the sodium sulphate with charcoal. The product, however, proved to be, not soda (i.e., sodium carbonate), but sodium sulphide. In 1791 Le Blanc conceived a modification of the second step in Méthérie's process, to consist in heating the sodium sulphate, not with charcoal alone, but with a mixture of charcoal and chalk (calcium carbonate). This solved the great problem, the chalk transforming Méthérie's sodium sulphide into the desired carbonate. Philippe Egalité soon built for Le Blanc a factory, and the state granted him patent rights for a period of 15 years. In 1793 Philippe met his death on the scaffold, and all his property, including the Le Blanc factory, was confiscated. When shortly afterward potash (the carbonate of potassium) had become scarce, owing to hindrance of transportation resulting from the wars of the Republic, a decree was issued making all methods for the manufacture of soda public property, and Le Blanc lost his patent rights. In 1799 the first factory was returned to him; but lack of means prevented him from setting it in operation, and in 1806 the great inventor, in a poor-house, committed suicide. For a period of 60 years, from 1824 to 1884, the Le Blanc process seemed the only possible one for use on a large industrial scale, and it yielded inestimable wealth. Since 1884 it has been gradually superseded by the Solvay process, in which sodium chloride (common salt) is changed to sodium bicarbonate by the action of ammonia and carbon dioxide.

LE BLANT, le blän', EDMOND FRÉDÉRIC (1818-97). A French archaeologist, born in Paris. He became interested in archæology during a visit to Rome in 1847 and afterward made a special study of Christian epigraphy and early Christian institutions in France. He became a member of the Academy of Inscriptions in 1867 and from 1883 to 1889 was director of the French School at Rome, replacing Geffroy. His works include: *Inscriptions chrétiennes de la Gaule antérieures au VIII^{ème} siècle* (1856-65); *Nouveau recueil des inscriptions chrétiennes de la Gaule* (1862); *Manuel d'épigraphie chrétienne* (1869); *Étude sur les sarcophages chrétiens antiques de la ville d'Arles* (1878); *Les sarcophages chrétiens de la Gaule* (1886); *Les actes des martyrs, a supplement to the Acta Sincera of Dom Ruinart* (1882); *L'Épigraphie chrétienne en Gaule et dans l'Afrique romaine* (1888); *Les persécuteurs et les martyrs aux premiers siècles de notre ère* (1893); and, with

Jacquemart, *Histoire artistique de la porcelaine* (1861-62).

LE BLOND, le blônd', ELIZABETH A. F. (MRS. AUBREY) (?-). A British Alpinist and author. Born in County Wicklow, Ireland, her father being Sir St. Vincent Bentinck Hawkins-Whitshed, Bart., she succeeded to the title of a Hanover baroness. Before marrying Mr. Le Blond, she had been the wife of Col. Frederick Burnaby and then of John Frederick Main. In 1907 she was chosen first president of the Ladies' Alpine Club, London. Previous to this date she had made numerous ascents, many of them on virgin peaks, including all the usual first-class climbs in the Swiss and Dauphiné Alps; she had explored and made first ascents of several glacier-clad peaks in Arctic Norway and had made numerous ascents in winter of high peaks until then unclimbed at that season. Besides many articles in leading English periodicals, she published: *The High Alps in Winter* (1883); *High Life and Towers of Silence* (1886); *Adventures on the Roof of the World* (1904); *The Story of an Alpine Winter* (1907); *Mountaineering in the Land of the Midnight Sun* (1908), all profusely illustrated with Mrs. Le Blond's own photographs (she was awarded a gold medal by the Royal Photographic Society). She also lectured much with her own slides. In other fields than mountaineering she wrote *A Guide to the Old Gardens of Italy* (1912), *The Life and Times (1715-1800) of Charlotte Sophie, Countess Bentinck*, an ancestress of hers (2 vols., 1912); and she translated and edited the autobiography of another ancestress, Princess Charlotte Amélie of Oldenburg.

LEBŒUF, le-bêf', EDMOND (1809-88). A marshal of France, born in Paris. He was educated at the Ecole Polytechnique and the school of artillery at Metz. He entered the army in 1832, and his services in Algeria (1837-41) made him colonel (1852). In that year he directed the French siege operations around Sebastopol and was made brigadier general (1854). He was attaché of the Russian Embassy in 1856, became general of division in 1857 and commander in chief of the artillery a year later, and did effective work with this arm at the victory of Solferino. In August, 1869, he became Minister of War and in the spring of 1870 was made marshal. Before the outbreak of the Franco-German War Lebœuf expressed his confidence in the preparedness of the French forces; summoned in April, 1870, before a committee of the French Legislative Assembly to report on the condition of the French army, he said: "We are ready; so ready that the war may last two years without our having need to buy so much as a gaiter button." Consequently, when the first disasters of the war revealed the true condition of affairs, the country was exasperated against him. He resigned from the ministry in August and assumed command of the Third Army Corps. He fought bravely at Vionville and Gravelotte and with the fall of Metz became a prisoner of the Germans along with Bazaine, whom he blamed for the capitulation. After the peace he lived in complete obscurity. He died June 7, 1888.

LEBON, le-bôn', FELIX FRÉDÉRIC GEORGES (1845-1907). A French general and tactician, born in Paris. He studied at the Ecole Polytechnique and the Ecole d'Application de l'Artillerie et du Génie. He was a lieutenant in the War of 1870 and became general of division in

1905. He collaborated on the *Revue d'artillerie* and wrote on artillery tactics, the use of dynamite, and numerous other topics; was a member of many military commissions, among others that of 1900-01 on new infantry regulations, and in 1907 was named member of the superior council of war. He was made a Commander of the Legion of Honor and was decorated by Belgium, Japan, Russia, Holland, Prussia, and other countries.

LE BON, le bôn', GUSTAVE (1841-). A French ethnologist and psychologist, born at Nogent-le-Rotrou. He was educated to be a physician, but practiced little. In 1884 he had charge of a government expedition to study the architecture of the Buddhist monuments in India. He wrote: *L'Homme et les sociétés* (2 vols., 1877); *Les premières civilisations de l'Orient* (1889); *Les monuments de l'Inde* (1894); *Lois psychologiques de l'évolution des peuples* (1895; Eng. trans., *The Psychology of Peoples*, 1898, reprinted 1912); *Psychologie des foules* (1895; Eng. trans., *The Crowd: A Study of the Popular Mind*, 7th ed., 1910); *Psychologie du socialisme* (1898; Eng. trans., *The Psychology of Socialism*, 1899); *L'Évolution des forces* (1899; Eng. trans., *The Evolution of Forces*, 1908); *Psychologie de l'éducation* (1904; 13th ed., 1909); *L'Évolution de la matière* (1905; Eng. trans., *The Evolution of Matter*, 1907); *La naissance et l'évanouissement de la matière* (1908); *La révolution française et la psychologie des révolutions* (1912; Eng. trans., *The Psychology of Revolution*, 1913).

LE BON, JOSEPH (1765-95). A French revolutionist. He was born at Arras and became a priest and professor of rhetoric at Beaune in 1789. Joining the revolutionary movement, he was elected a member of the Convention in 1793, was commissioned by that body to defend Cambrai against the Austrians, and this he successfully accomplished. His severe measures against the enemies of the Convention in the Department of Pas-de-Calais led to a violent denunciation of Le Bon by his political opponent, Guffroy. The latter finally succeeded in bringing about Le Bon's condemnation by the criminal tribunal of Somme, and he was executed.

LE BOULENGÉ, le bôw'lan'zhâ', PAUL EMIL (1832-1901). A Belgian artillery officer, born at Mesnil-Eglise. After long service he retired in 1897 with the rank of lieutenant general. He made many valuable discoveries in ballistics, especially the Le Boulengé chronograph, which he described in 1865, and wrote *Étude de balistique expérimentale* (1868) and *Description, maniement, et usage des télémètres de Le Boulengé* (2d ed., 1877). See BALLISTICS.

LE BOURGET-DRANCY. See BOURGET, LE.

LEBOUTHILLIER DE RANCÉ, le bôw'tê-yâ' de râ'n'sâ', D. A. J. See RANCÉ.

LE BRAZ, le brâs', ANATOLE (1859-). A French novelist, born at Duault. Educated at Paris and for many years a teacher in various schools and colleges, he finally became professor of French literature at the University of Rennes. He has described feelingly and truthfully Breton legends and customs. Thrice a visitor to the United States as lecturer for the Alliance Française, he had tremendous success in conveying to the American public the mysticism and grandeur of old Brittany. His works include: *Tryphina Keranglus* (1892); *La chanson de Bretagne* (1892); *La légende de la mort de*

Basse Bretagne (1893; Eng. trans., *Dealings with the Dead*, 1898); *Au pays des pardons* (1895; Eng. trans., *The Land of Pardons*, 1906), crowned by the French Academy; *Pâques d'Islande* and *Vieilles histoires du pays breton* (1897); *Le gardien du feu* (1900); *Le sang de la sirène* (1901); *La terre du passé* (1902); *Essai sur l'histoire du théâtre celtique* (1904); *Les contes du soleil et de la brume* (1905); *Armes d'occident* (1906); *Au pays d'exil de Chateaubriand* (1909); *Armes d'occident* (1912).

LEBRET, le-brâ', GEORGES (1853-). A French statesman. He was born at Etampes, studied law at Paris, and received the degree of LL.D. In 1879 he was sent by the Minister of Public Instruction on a mission to England and Scotland to report on leases and agricultural legislation and usages. Afterward he became a fellow in law at the University of Caen, where he was appointed professor of civil law, professor of criminal law (1885), and professor of financial legislation (1891). He held the offices of municipal counselor (1892-1900) and mayor (1892-96) in Caen and from 1893 to 1902 was deputy (Republican) from the Department of Calvados. Returning to Caen, he was reappointed to the chair of civil law. In 1898-99 he held the portfolio of Minister of Justice in Dupuy's cabinet. Lebrete became recognized as an authority on technical jurisprudence. His publications include *Etude sur la propriété foncière en Angleterre* (1882). He became editor of the *Revue critique de législation et de jurisprudence*.

LEBRIJA, lá-brě'há (Lat. *Nebriſsa-Veneria*). A town of Spain, in the Province of Seville, 44 miles south by west of Seville, on the railway between Seville and Cadiz (Map: Spain, B 4). It is pleasantly situated on the fertile slopes of the Sierra de Gibaldin and on the border of the extensive marshes around the mouth of the Guadalquivir, known as Las Marismas. It has a ruined castle, believed to date from the time of the caliphate, and a large church, originally a mosque, exhibiting a strange combination of the Arabic, Roman, and Gothic styles. It carries on a considerable trade in grain, wine, oil, and cattle. Pop., 1900, 11,127; 1910, 11,506. Lebrija is believed to have been founded by the Greeks in ante-Roman times, was a large and flourishing city during the time of the Moorish Empire, and was definitively captured by the Christians under Alfonso the Wise in 1264. It gained renewed celebrity as the birthplace of one of the leaders of the revival of learning, Antonio de Lebrija, or Nebrija (q.v.) (1444-1522), who published in 1492 the *Grammatica castellana* and the *Latin-Spanish Dictionary* (the *Spanish-Latin* part appearing in 1495), and collaborated on the production of the Complutensian Polyglot Bible, prepared at Alcalá de Henares by Cardinal Ximenes (q.v.).

LEBRIJA, or **LEBRIJA**, ELIO ANTONIO DE. See NEBRIJA, or NEBRIJA, ELIO ANTONIO DE.

LEBRUN, le-brün', CHARLES (1619-90). A French historical and portrait painter, architect, and decorator. He was born in Paris, Feb. 24, 1619. His predisposition towards art, which developed early, was discovered by the Chancellor Séguier, who placed him in the atelier of the painter Vouet and in 1642 sent him to Rome. In Rome he came under the influence of Nicolas Poussin. In 1642 he was again in Paris and was called upon to decorate the Hôtel Lambert and to repair the Petite Galerie du Louvre,

which had been injured by fire. The restoration of the Petite Galerie led to the construction of the Galerie d'Apollon above it, which Lebrun was employed to decorate. This work he left unfinished, but the numerous drawings from his designs which are in existence made it possible for Eugène Delacroix in the nineteenth century to complete the work according to the original intention.

The extraordinary power which Lebrun exercised during the reign of Louis XIV came mainly from the part he played in the establishment of the Academy of Painting and Sculpture. He was also instrumental in the establishment of the French Academy at Rome, and until his death was practically Minister of Fine Arts to the King, having the supervision of all his immense artistic undertakings. More than any other individual he was responsible for the "style Louis XIV."

After the completion of the Hôtel Lambert Lebrun was employed by the Chancellor Fouquet to decorate the new château of Vaux-le-Vicomte, designed by Louis Leveau. In 1662 he was appointed first painter to the King and placed in charge of the decoration of the palace and park of Versailles. He designed the fountains and statues of the park, decorated the vestibule of the palace, and in 1679 began the decoration of the great gallery with paintings of the deeds of Louis XIV. He was made director of the new manufacture of tapestries and furniture at Les Gobelins and as such exercised a dominating influence on the tapestries. Among the hundreds of tapestries produced under his direction, were the well-known series "History of the King," of "Alexander," of "Constantine," and of "Mel-eager." He even chiseled objects of art, beakers, cups, amphoras, designed furniture, plate, and other objects in the sumptuous taste of the day, the surviving engravings of which show decorative talent of a high order. He decorated the château des Sceaux for Colbert and designed some of its pavilions. Next to Versailles, Lebrun's most important work was the construction and decoration of the château of Marly, which has been destroyed, but many of his designs for the architecture have been preserved. After the death of Colbert his fortunes declined, and in consequence of the troubles brought upon him by the enmity of Louvois, Lebrun sickened and died, on Feb. 12, 1690.

He was an able and prolific painter, and his works show good composition and great inventive power. Although of good decorative effect, they are mannered; his drawing is superficial, and his coloring untrue to nature. The Louvre contains a large number of his works, the best known of which is the series of five pictures illustrating the "History of Alexander the Great." He is well represented in most of the principal European museums, especially in those of France.

XIV d'après Charles LeBrun et Picart (ib., n.d.).

LEBRUN, or **LE BRUN**, CHARLES FRANÇOIS, DUKE DE PIACENZA (1739-1824). A French statesman, born at Saint-Sauveur-Landelin, in the Department of Manche. He began to practice law in Paris in 1762. He began public life as secretary to the future Chancellor Maupeou, was made inspector of the crownlands (1768), and indirectly exercised great influence on the policy of the ministry of Louis XV. After the dismissal of the Maupeou ministry, in 1774, Lebrun was in retirement till 1789. At the outbreak of the Revolution he wrote a pamphlet, entitled *La voix du Citoyen*, which predicted the course of events, and was elected to the States-General, and in the Constituent Assembly he spoke often on matters of finance. He was made Governor of the Department of Seine-et-Oise in 1791 and distinguished himself by an orderly and vigorous administration. Twice arrested during the Terror, he was freed in 1795, and elected deputy to the Council of Five Hundred, becoming President in the following year. In 1799 he was reelected, acquired a pre-eminence in that body, and contrived to influence legislation. After the 18th Brumaire Napoleon made Lebrun Third Consul for his services during the coup d'état. In 1805-06 he negotiated the union of the Ligurian Republic with the French Empire and was made Duke of Piacenza (1808). In 1807 he reorganized the Cour des Comptes (the exchequer), but on the abolition of the *tribunat* by the Emperor retired to private life. He was called back in 1810 at the age of 71 to govern Holland after the abdication of Louis Bonaparte. He returned to Paris in 1813 and soon after, for his services to the Bourbons, was raised to the peerage. He went over, however, to Napoleon during the Hundred Days, and on the return of the Bourbons his name was struck from the list of peers, but restored in 1819. Lebrun published translations of Tasso's *Gerusalemme Liberata* (1774), the *Iliad* (1776), and the *Odyssey* (1776). His *Memoirs* appeared in 1829.

LEBRUN, MARIE LOUISE ELIZABETH VIGÉE. See VIGÉE-LEBRUN.

LEBRUN, PIERRE ANTOINE (1785-1873). A French poet and dramatist, born in Paris. During the campaigns of the Empire his patriotic odes *A la grande armée* (1805), *Sur la campagne de 1807* (1808), and on kindred subjects attracted considerable attention, and his plays won him a place in the Academy (1828). Among these plays may be mentioned *Ulysse* (1815), *Pallas* (1822), and especially *Marie Stuart* (1820). His poem *Voyage en Grèce* was published in 1828, and his works were collected in 1844-63.

LEBRUN, PONCE DENIS ECOUCHARD (called **LEBRUN-PINDARE**) (1729-1807). A French poet, born in Paris. He was educated at the Collège Mazarin and early began to write verses. Afterward he became secretary to the Prince de Conti. He lived in the gay literary society of the time. wrote letters and exchanged epigrams, and won the title of Pindar for the perfection and imagination displayed in his odes. He lacked the warmth and real feeling to make him a great poet, but his epigrams are models. His works were published with a notice by Ginguené in 1811, and his *Œuvres choisies*, with a biography by Desprez and Campenon, in 1821 and 1828.

LE CARON, le ká'rón', HENRI (1841-94). A

British government spy, born at Colchester, England. His true name was Thomas Miller Beach; but when the American Civil War broke out in 1861 he joined the Federal army under the name by which he was subsequently known. At the close of the war he had risen to the rank of major. While still in the army he joined the Fenian organization and later became a paid spy of the British government. He furnished information that led to the defeat of the Fenian invasion of Canada in 1870 and of the Riel rebellion in 1871. In 1889 his career as a secret-service agent was brought to an end when the nature of his work was disclosed in testimony for the London *Times* before the Parnell Commission. (See PARNELL, CHARLES STEWART.) He published *Twenty-Five Years in the Secret Service* (6th ed., 1892).

LE CARON, JOSEPH (?-1632). A French Recollect missionary to the Indians in America. He went with three other Franciscan Recollects to Canada in 1615, with other Franciscans built a monastery near Quebec, and penetrated in the same year to Lake Huron, which he was the first white man to reach. His mission was unsuccessful, as was a second attempt in 1623. He was sent to England after the capture of Quebec in 1629 and never succeeded in getting back to Canada. His studies of the Huron language were of value to his successors.

LE CATEAU. See CATEAU.

LECCE, lèt'chá. An episcopal see, the capital of the Province of Lecce, Italy, 24 miles by rail south of Brindisi, and 7 miles from the Adriatic (Map: Italy, G 4). Interesting buildings are the seventeenth-century cathedral of San Oronzo, the sixteenth-century church of Santa Croce; the sixteenth-century Prefettura, formerly a Celestine convent, containing a valuable collection of ancient vases, coins, and inscriptions; the seventeenth-century baroque church of San Domenico; the sixteenth-century hospital; and in the Campo Santo (cemetery) the remains of the church of Santi Nicola e Cataldo, built by the Norman Count Tancred in 1180. The streets are narrow and crooked. Lecce has a public garden, a technical school, a Gymnasium, a female normal school, a technical institute, a school of agriculture, a museum, and a provincial library of 10,000 volumes. It is famous for the high quality of its oil and for the great government tobacco factory. It has cotton, wool, soap, pottery, furniture, book, and leather manufactures, and the country produces grain, fruit, honey, cotton, hemp, tobacco, cattle, and sheep. The ancient city here was called Lupia, and in near-by Rudia (now the village of Rugge) Ennius (q.v.) was born in 239 B.C. Pop., 1901, 32,687; 1911, 36,222. Consult: S. Simone, *Lecce e i suoi dintorni descritti ed illustrati* (Lecce, 1874); Cosimo de Giorgi, *Lecce sotterranea* (ib., 1907); M. S. Briggs, *In the Heel of Italy: A Study of an Unknown History* (New York, 1911).

LECCO, lèk'kò. The capital city of the Province of Como, Italy, on the southeast arm (called Lake of Lecco) of Lake Como (q.v.), 32 miles by rail north of Milan (Map: Italy, B 2). It has statues of Garibaldi and of Manzoni, in whose *I Promessi Sposi* the locality is beautifully described. Over the Adda, which issues from Lake Como here, there is a 10-arch stone bridge, with towers at each end, built in 1385. There are a city hospital, an orphan asylum for girls, a technical school, an industrial school,

a city library, a theatre, and a chamber of commerce and arts. Industrially Lecco is important for its manufactures of iron, tin, wire, silk, cotton, copper and brass ware, olive oil, and candles, and is a good cattle market. Pop. (commune), 1901, 10,275; 1911, 12,146. In the Middle Ages the city was fortified and the seat of a count until the twelfth century, when it came into the possession of Milan. April 26, 1799, the French under Serrurier were defeated here by the Austrians and Russians.

LECCO, LAKE OF (It. *Lago di Lecco*). The southeastern arm of Lake Como (q.v.), Italy.

LECH, lēk (Lat. *Licis*). A right tributary of the Danube and a former boundary between Bavaria and Swabia. It rises in the Lake of Formarin in Vorarlberg, Tirol, at an altitude of about 6000 feet (Map: Germany, D 4). Its course in the mountain ranges of Tirol is tortuous and swift and on entering Bavaria it forms the finest rapids in Germany. Even in its course through Bavaria the river retains the character of a mountain stream and in consequence is not navigable. It joins the Danube at the ruined castle of Lechsend after a course of about 180 miles and a total descent of over 4600 feet. Its chief tributaries are the Vils and the Wertach. Here, in 1632, Gustavus Adolphus defeated the Imperialists under Tilly, who was mortally wounded. See **LECHFELD**.

LE CHAPELIER, le shā'p'lyā', ISAAC RENÉ GUY (1754-94). A French revolutionist. Born at Rennes, he became an advocate. In 1789 he was elected by the Third Estate to the States-General, and in August of that year he became President of the Constituent Assembly. He had an important share in drawing up the new constitution and was one of the founders of the Breton Club. Frightened by the revolutionary excesses of 1791, Le Chapelier became more moderate, actively opposed Robespierre, and urged control of the revolutionary clubs. A visit to England in the interests of law clients served as a pretext for his adversaries to denounce him as an émigré. He was condemned to death by the Revolutionary Tribunal and executed at Paris.

LE CHÂTELIER, le shā't'lā', HENRI LOUIS (1850-). A French chemist. He was educated at the Collège Rollin, at the Ecole Polytechnique, and at the Ecole des Mines, where he became professor of chemistry in 1878. In 1898 he was appointed professor of mineralogical chemistry in the Collège de France. He invented several useful pieces of apparatus for experiments in physics and chemistry. A Chevalier of the Legion of Honor and a member of the Academy of Sciences, he served as president of the Société de Minéralogie in 1898 and in 1907 as president of the Société de Physique. His writings include: *Cours de chimie industrielle* (1896; 2d ed., 1902); *High Temperature Measurements*, translated by G. K. Burgess (1901; 2d ed., 1902); *Recherches expérimentales sur la constitution des mortiers hydrauliques* (1904; Eng. trans., 1905); *Leçons sur le carbone* (1908); *Introduction à l'étude de la métallurgie* (1912); *La Silice et les silicates* (1914).

LECHEVALIER, le-she-vāl'yā', JEAN BAPTISTE (1752-1836). A French classical archaeologist. He was born at Treilly, Normandy, France, and was educated for the ministry. In 1784 he accompanied the Count of Choiseul-

Gouffier as secretary to the Levant and with him made diligent researches in the plain of Troy (1784-86); he held that the site of Troy was to be found on the hills above Bunárbashi. He was director of the Library of Ste. Geneviève in Paris from 1808 until his death. Of his works, the best known are his *Voyage dans la Troade* (1800; Eng. trans. by Dalzel, under the title of a *Description of the Plain of Troy*), and *Ulysse-Homère* (1829), in which he asserts that Ulysses was the author of the *Iliad* and the *Odyssey*. Consult Noël, *Jean-Baptiste Lechevalier* (Paris, 1840).

LECHFELD, lēk'fēlt. A plain in Bavaria, south of Augsburg, on the banks of the river Lech, where (1110) the Great (q.v.), Aug. 10, 955, inflicted a crushing defeat upon the Hungarians or Magyars. This defeat checked their incursions and caused them to give up their plundering expeditions, which had long been a scourge to Europe and especially to Germany.

LECHFORD, lēch'fērd, THOMAS (c.1590-c.1645). The first lawyer in Boston. He was born in London, England, and before leaving that country he belonged to the legal profession and was a member of Clement's Inn. It was probably the assistance which he gave to a barrister named Prynne, who was found guilty of libel by the Star Chamber, that got him into trouble with the home authorities and led to his seeking an asylum in America, where he arrived in 1638. The Massachusetts government also looked upon him with small favor, not because of his politics, but because of his profession and his religious views. Unable to secure any cases in the courts, he was, to quote his own words, "forced to get his living by writing petty things, which scarce found him bread." After three years of this unhappy existence he returned to England in 1641 and there published a book entitled *Plain Dealing, or, News from New England* (1642), which is valuable for its light on early Colonial life in Massachusetts. It was reissued in 1644 under the title *New England's Advice to Old England* and again in 1867 with notes and an introduction by J. Hammond Trumbull. He also wrote a journal of his life in Boston. Of his adventures after his return nothing is known except what is contained in the single phrase of John Cotton's that he "put out his Book (such as it is) and Soon after dyed."

LECHLER, lēk'lēr, GOTTHARD VICTOR (1811-88). A German Protestant theologian, born at Kloster Reichenbach. He studied at Tübingen (1829-34), was vicar of Dettingen in 1835, in 1853 was made dean of the diocese of Knittlingen, and in 1858 became pastor at St. Thomas and professor at Leipzig. He took some part in politics as a member of the First Chamber of the Saxon Parliament. In 1880 he became ecclesiastic privy councillor and three years afterward retired from his duties as pastor. His works include: *Geschichte des englischen Deismus* (1841); *Das apostolische und das nachapostolische Zeitalter* (1851; Eng. trans. from the 3d Ger. ed. by Lorimer, 1886); *Geschichte der Presbyterial- und Synodalverfassung seit der Reformation* (1854); *Der Kirchenstaat und die Opposition gegen den päpstlichen Absolutismus im Anfange des vierzehnten Jahrhunderts* (1870); *Johann von Wiclif und die Vorgeschichte der Reformation* (1873; trans. by Lorimer, 4th ed., 1904); *Johannes Huss* (1890; Eng. trans., 1891).

LECKY, WILLIAM EDWARD HARTPOLE (1838-1903). An Irish historian and publicist, of Scottish descent, born at Newtown Park, near Dublin, March 26, 1838. While acquiring an academic training at Cheltenham College and at Trinity College, Cambridge, and while making some preparation for the clerical profession, he centred his interest in the literature and politics of Ireland and at the same time traveled much on the Continent. He was still a student at college when he published his first book, *The Religious Tendencies of the Age* (1860); and the following year he published *The Leaders of Public Opinion in Ireland*. In 1865 the issue of his *History of the Rise and Influence of the Spirit of Rationalism in Europe* made a marked impression on the literary world, mainly on account of the evidence which it afforded of extraordinary erudition and profound contemplation. This impression was sustained by his subsequent work, *History of European Morals from Augustus to Charlemagne* (1869), though in a less degree, on account of the nature and scope of its subject. Nearly 10 years were employed by Lecky in studies and investigations preparatory to the publication of his *History of England in the Eighteenth Century* (1878-90). In 1892 he was offered the regius professorship of history at Oxford, but he declined to accept. He was elected to Parliament for Dublin University in 1895 and reelected in 1900. In 1897 he was made Privy Councilor on account of his "very great literary eminence." After 1886 he spoke and worked for the Liberal Unionists. He died Oct. 22, 1903. New editions of his histories of England (7 vols.) and Ireland (5 vols.) were published in New York in 1893; and his later works include: *Poems* (1891); *The Political Value of History* (1893); *Democracy and Liberty* (1896); *The French Revolution* (1904); *Historical and Political Essays* (1908). Consult *A Memoir of . . . William Edward Hartpole Lecky*, by his wife (London, 1909), and J. F. Rhodes, "William Edward Hartpole Lecky," in *Historical Essays* (New York, 1909).

LECLAIRE, le-klâr', EDMÉ JEAN (1801-72). A French reformer, known chiefly through his experiments in profit sharing. He started in business as a house painter in Paris in 1827. The idea of profit sharing was first suggested to him in 1835, and in 1842 he announced his purpose to share the profits of his establishment with his employees and soon divided 11,866 francs among them (about \$50 each), the sums varying according to the yearly wage. In 1838 he had established a mutual aid society, which was reorganized in 1853, from which date it was maintained out of the profits of the establishment instead of from contributions of members. In 1864 retiring pensions were substituted for the right to a division of the funds of the mutual aid association. He became the Maire of Herblay in 1865 and died there Aug. 10, 1872. The month before his death the Maison LeClaire divided \$10,000 among 600 workmen. The company which he founded is still prosperous and continues to follow the plan of distribution instituted by LeClaire. See **PROFIT SHARING**.

LECLANCHÉ (le-klan'shâ') **CELL**. See **VOLTA CELL**.

LE CLEAR, le klër, THOMAS (1818-82). An American genre and portrait painter, born in Oswego, N. Y. He was self-taught and first made a reputation by painting portraits, while in London, Can., about 1832. Afterward he

lived principally in New York City and Buffalo, but made occasional trips abroad, especially to England, where he frequently exhibited at the Royal Academy. He was elected to the National Academy in 1863. Among his genre pictures are "The Itinerant," "Young America," and "The Reprimand," purchased by the American Art Union. His portraits, faithful, expressive, and strongly modeled likenesses, but of uncertain technique and uneven merit, include those of General Grant, President Arthur, Edwin Booth, Millard Fillmore, Bayard Taylor, Daniel Dickinson (1870), Parke Godwin (1877), William Page (in the Corcoran Gallery at Washington), William Cullen Bryant (1880), S. R. Gifford (1881), and George Bancroft (in the Century Club, New York City).

LECLERC, le-klâr', CHARLES VICTOR EMANUEL (1772-1802). A French general, born at Pontoise in the Department of Seine-et-Oise. He joined the cavalry service in 1791 and at the siege of Toulon (1793) attracted the attention of Bonaparte, who took him to Italy as his adjutant in 1796 and made him brigadier general after Leoben. Soon afterward he married Pauline Bonaparte. He accompanied Napoleon to Egypt, returned with him, and helped him on the 18th Brumaire. In 1800 he fought at Fleurus and Hohenlinden under Moreau. In 1801 he was dispatched with an army of 20,000 men against Toussaint l'Ouverture, the negro Governor of Haiti. After losing half his army, mostly by the fever, he forced Toussaint to capitulate. The great negro leader was subsequently seized and sent to France. Leclerc was presently stricken down with yellow fever and died in December, 1802.

LE CLERC, GEORGE LOUIS. See **BUFFON, COMTE DE**.

LE CLERC, le klêrk, JEAN, or JOHANNES CLERICUS (1657-1736). A Swiss Protestant scholar. He was born at Geneva, where his father was professor of Greek. From an early period he showed a particular aptitude for the study of ancient languages. He also paid great attention to theology. Before he was 20 Le Clerc had imbibed Socinian opinions in religion. He also denied the special inspiration of the Bible. In 1678 he went as tutor to Grenoble; in 1680 he returned to Geneva and was ordained a minister. All the while his objections to the accepted theology of his associates had been growing; under the name of Liberius de Sancto Amore, in 1679, he wrote 11 letters against the errors of the scholastic theologians as the partisan of the Dutch Remonstrants. In the latter part of 1681 Le Clerc returned to Grenoble and thence went to London, where he preached six months to the Walloon and Savoy congregations. He was appointed professor of philosophy, classical literature, and Hebrew at the Remonstrant Seminary of Amsterdam in 1684; later (1712) of Church history. He had to retire in 1728 in consequence of a paralytic stroke, and for eight years before his death was much weakened in mind. Le Clerc's writings are very numerous. Seventy-three separate publications have been enumerated by Haag, *France Protestante*, these include a commentary on the entire Bible (1693-1731), which, to a certain extent, was a forerunner of modern Biblical studies—it assailed traditional views and urged the necessity of scientific inquiry into the origin of the books of the Bible. LeClerc's greatest service to posterity, however, was the publication of a quar-

terly, the *Bibliothèque universelle et historique* (25 vols., 1686-93), followed by the *Bibliothèque choisie* (1703-13) and the *Bibliothèque ancienne et moderne* (1714-27). His editions of several of the ancient classics and of the apostolic fathers (1698; 2d ed., 1724) prove both his learning and acumen, while his *Ars Critica* (3 vols., 1712-30) and *Epistolæ Criticæ et Ecclesiasticæ* had considerable influence in his time and are still not without value. His collected works appeared at Amsterdam in four volumes. A number of his writings, including his *Harmony of the Gospels* and *Twelve Dissertations* from his *Genesis*, were published in English during his lifetime. Consult Van der Hoeven, *De Johanne Clerico* (Amsterdam, 1845).

LECLERC, JOSEPH VICTOR (1789-1865). A French classical scholar, born in Paris. In 1824 he was called to the chair of Latin eloquence at the Faculté des Lettres of Paris, and in 1834 he was admitted to the Academy of Inscriptions. His chief publications were his *Nouvelle rhétorique française* (1822; 11th ed., 1850); *Des journaux chez les Romains* (1838); and a translation of Cicero, *Œuvres complètes de Cicéron* (30 vols., 1821-25; 2d ed., 35 vols., 1823-27). He also edited volumes xx-xxiii of the *Histoire littéraire de la France* (1842-56). Consult Ernest Renan, "Joseph Victor Leclerc," in the *Revue des Deux Mondes* (Paris, 1868).

LECLERC, SÉBASTIEN (1637-1714). A French engraver, born in Metz. He received his only instruction from his father, a jeweler, and began to execute plates at an early age, although he later devoted himself principally to engineering and mathematics. Lebrun induced him to return to his original profession of engraving. In 1670 he received lodging at the Académie, in the same year became cabinet engraver, and in 1672 entered the Royal Academy, where he was professor of geometry and perspective. Leclerc left a large number of plates, most of them after his own designs. His smaller pieces are the best and reveal his facility for design and the precision and brilliancy of his style. The most noted of his plates are 39 for Benserade's *Ovid* (1676); "The Passion," 36 plates, dedicated to Madame de Maintenon (1692); "Les grandes conquêtes du roi" (1687); and "Les petites conquêtes du roi" (1702). He wrote: *La pratique de la géométrie* (1669); *Discours touchant le point de vue* (1679); *Traité d'architecture* (1714); and other works. Jombert published a catalogue of his plates in 1774.—His son SÉBASTIEN (1676-1763) was a painter, and so also was his grandson, JACQUES SÉBASTIEN (1734-85), who became professor at the Royal Academy. The Metropolitan Museum, New York, possesses "The Flutist" by him. Consult Mézume, *Sébastien Leclerc et son œuvre* (Paris, 1877).

LECLERCQ, le-klérk', MICHEL THÉODORE (1777-1851). A French dramatist, born in Paris. From 1810 to 1819 he held a small office in the revenue service. He wrote short stories and the novel *Le château de Duncan*, but is best known for his *Proverbes dramatiques*, salon comedies, written in the style of his predecessor Carondelet and marked by piquant dialogue and vivid character portrayal. These include *L'Humoriste*, *L'Intrigant malencontreux*, and *Le retour du baron*. A collected edition was published in 1823-26 and *Nouveaux proverbes dramatiques* in 1833.

LECLERCQ, ROSE (1845-99). An English

actress. She was born in Liverpool, of a theatrical family. After appearing in London as a dancer, she made, in 1861, a hit in Brougham's *Playing with Fire*. The following years brought her popularity in many parts, such as Eliza in *After Dark* (1869), Claire in *The Shaughraun* (1875), and later Lady Bawtrey in *The Dancing Girl* (1891). Her last original part was Mrs. Beechinnor in *Manœuvres of Jane*, by Henry Arthur Jones, produced at the Haymarket in 1898. Among her Shakespearean rôles were Desdemona, Mrs. Ford, and later Mrs. Page in *The Merry Wives of Windsor* and Olivia in *Twelfth Night*.

LE CLERQ, CHRÉTIEN (c.1630-c.1695). A French missionary, born at Artois. He was an ardent member of the Recollect Order of Franciscans and in 1651 went as a missionary to Canada. After 10 years of labor among the Indians, on the island of Gaspé, he returned to France, got permission to build a house for the Recollects in Montreal, and returned to Gaspé in 1662; but from that time on accomplished little in his missionary labors. Afterward he returned to France and became guardian of the convent of Lens. He wrote *Nouvelle relation de la Gaspésie* (1691) and *Establishment of the Faith in New France* (Eng. trans. by John G. Shea, 1881). His history is of no great value, as it deals only with the work of Frontenac, who opposed the Jesuits and favored the Recollects, and from the ecclesiastical side is tinged with partisanship. Consult R. G. Thwaites, *Jesuit Relations* (Cleveland, 1896-1901).

LECOQC, le-kôk', (ALEXANDRE) CHARLES (1832-1911). A French musical composer, born in Paris. He was a pupil of the Conservatory and won the prize for harmony in 1850. He began almost immediately to write operettas, a genre with which he was afterward identified. *Fleur de thé* (1868) was his first real success, soon followed by his most popular work, *La fille de Mme. Angot* (1873). *Groflé-Grofla* (1874), *La jolie Persane* (1880), *L'Oiseau bleu* (1884), and many others came in rapid succession. His music is always melodious, gay, and lively, and written with a skill and care not generally found in lighter operas. Other and smaller compositions include songs and salon music.

LECOINTE, le-kwânt', GEORGES (1869-). A Belgian naval officer and scientist, born in Antwerp and educated at the military academy in Brussels. As second in command he was the captain of the *Belgica* in the Belgian Antarctic expedition of 1897-99, the first expedition to winter in the Antarctic Ocean. Lecoince added much to scientific results by his accurate and extensive astronomical and magnetic observations. (See POLAR RESEARCH.) Largely through his efforts the International Polar Commission, which first met at Brussels, was formed in 1908. After 1900 he was director of the Royal Observatory of Belgium, at Uccle. Of his technical works the most important are *La navigation astronomique et la navigation estimée* (1896) and *Travaux hydrographiques* (1903).

LECOMPTON. A city in Douglas Co., Kans., on the Kansas River, 11 miles west by north of Lawrence, on the Atchison, Topeka, and Santa Fe Railroad (Map: Kansas, G 4). Until 1903 it was the seat of Lane University, founded in 1865. Lecompton (named in honor of Judge S. D. Lecomte, prominent in the early history of Kansas) was settled in 1854 by pro-

slavery men and during the contest for the control of Kansas between the proslavery and free-State settlers was the headquarters of the former. It was here that in October-November, 1857, the convention met which drew up the Lecompton Constitution (q.v.). (See KANSAS.) The city owns an electric-light plant. Pop., 1900, 408; 1910, 386.

LECOMPTON CONSTITUTION. In American history, a form of government for the State (then the Territory) of Kansas, adopted by a convention, of disputed legality, held at Lecompton, Kans., October-November, 1857. The Lecompton Constitution declared the right of slaveholders in Kansas to their slaves to be inviolable, prohibited the Legislature from passing any act of emancipation, and forbade any amendment of the instrument before 1864. The Constitution as a whole was not submitted to the people, they were only to be allowed to vote upon the clause whether they would have the "Constitution with slavery" or the "Constitution with no slavery," the instrument being so worded that in either case it would fasten slavery upon the State, there being a clause to the effect that the right to slaves already held in Kansas was inalienable. The Constitution was thus formally submitted to the electors Dec. 21, 1857. For its adoption "with slavery" the vote returned was 6226, more than half of which was from the counties along the Missouri border, whose whole number of voters, according to the census, did not exceed 1000. For the Constitution "with no slavery" 569 votes were returned, but the great body of the free-State men declined to vote at all, regarding the election as a fraud and a farce. The legally constituted Territorial Legislature, controlled by the free-State men, submitted the same instrument to the consideration of the people of Kansas, Jan. 4, 1858, and the result was a vote of 10,226 against it and of less than 200 in its favor. The question was carried to Congress, where the Senate voted to admit Kansas with this Constitution. The House, however, rejected this bill, and after a conference of committees both Houses agreed on the so-called English Bill. This, among other things, provided for a second submission of the Lecompton Constitution, the acceptance of which by the people was made a *sine qua non* as regards the immediate admission of Kansas into the Union. On Aug. 2, 1858, the Constitution was again rejected by a majority of 10,000. This virtually ended the struggle for the establishment of slavery in Kansas. An antislavery Constitution was framed and adopted in 1859, and the State was admitted to the Union, Jan. 29, 1861. See KANSAS.

LECOMTE, le-kônt', PAUL HENRI (1856-). A French botanist, born at Saint-Nabord (Vosges). He taught in several lycées before being appointed (1906) to the chair of botany at the Museum of Natural History. Several prizes and medals were awarded him. He founded (1897) and was the first editor of *La Revue des Cultures Coloniales* and wrote: *Les textiles végétaux et leur examen microchimique* (1892); *Les textiles végétaux des colonies* (1895); *Le cacao* (1897); *Le café* (1899); *Le coton* (1899); *Le vanillier* (1900); *Le coton en Egypte* (1904); *Anacardaires de l'Afrique occidentale* (1905). He also wrote several treatises on botany for secondary schools.

LECOMTE DU NOUY, le-kônt' du nouÿ,

JULES JEAN ANTOINE (1842-). A French historical and genre painter, born in Paris. He was a pupil of Gleyre, Gérôme, and Signol at the Beaux-Arts, where he won the second Prix de Rome in 1872 with his "Death of Jocasta" (Arras Museum). This was followed by "Invocation of Neptune" (1866, Lille Museum), and among his subsequent productions exhibited annually in the Salon are to be especially noted "Love which Passes and Love which Remains" (1869, Boulogne Museum); "The Sorcerer" (1870, Rheims Museum); "Bearers of Evil News before Pharaoh" (1872, Luxembourg). In fresco he painted "Two Episodes in the Life of St. Vincent de Paul" (1876-79, church of the Trinity, Paris). Although somewhat conventional in style and dull in coloring, all his works are to be commended for correct drawing, subtle characterization of the figures, and sound archaeological knowledge. He painted also excellent portraits, among his sitters being the sovereigns of Rumania (including Carmen Sylva) and Servia, and was awarded medals in London (1862), Paris (1866, 1869, 1872, 1889), and Vienna (1873).

LE CONTE, lê kônt', JOHN (1818-91). An American physicist, the son of Louis Le Conte. He was born in Liberty Co., Ga.; graduated at Franklin College (now the University of Georgia) in 1838 and at the College of Physicians and Surgeons, New York, in 1841; became professor of natural philosophy and chemistry in Franklin College in 1846; and resigned in 1855 to become lecturer on chemistry in the College of Physicians and Surgeons, New York. In 1856 he became professor of natural and mechanical philosophy in South Carolina College at Columbia; in 1869 he was appointed professor of physics and industrial mechanics in the University of California at Oakland; in 1876-81 was president of that institution and in 1881 resumed the chair of physics there. He was a member of the principal scientific associations and published, besides numerous papers and magazine articles, *Philosophy of Medicine* (1849) and *Study of the Physical Sciences* (1858).

LE CONTE, JOHN EATON (1784-1860). An American naturalist, brother of Louis Le Conte. He was born near Shrewsbury, N. J., entered the United States army in 1818 as a topographical engineer, and made many surveys and plans for fortifications until 1831, when he was retired with the rank of major. He devoted much of his time to extensive studies in natural history, and published: *Monographs of North American Species of Utricularia, Gratiola, and Ruellia*; "Observations of the North American Species of Viola" and "Descriptions of the Species of North American Tortoises" in the *Annals of the New York Lyceum of Natural History*; "A Monograph of North American Histeroides," in the *Boston Journal of Natural History*; and "Descriptions of Three New Species of Arvicola, with Remarks upon Other North American Rodents," in the *Proceedings of the Academy of Natural Science of Philadelphia*.

LE CONTE, JOHN LAWRENCE (1825-83). An American entomologist, son of Major John E. Le Conte. He was born in New York City, graduated at Mount St. Mary's College, Emmitsburg, Md., in 1842, and at the New York College of Physicians and Surgeons, New York, in 1846. He made scientific excursions in Western States when a student, and afterward traveled extensively in North and Central America,

transmitting the results of his observations to scientific societies. He entered the army as surgeon of volunteers in 1862 and was promoted to medical inspector in the regular army with the rank of lieutenant colonel, which position he retained until the end of the war. In 1874 he served as president of the American Association for the Advancement of Science. From 1873 till his death he was chief clerk of the United States mint at Philadelphia. He devoted his attention particularly to the study of entomology and became widely recognized as an authority in that subject. In the Collections of the Smithsonian Institution are published his *Classification of the Coleoptera of North America* (part i, 1862; part ii, 1873); *List of Coleoptera of North America* (1866); *New Species of North American Coleoptera* (part i, 1866; part ii, 1873).

LE CONTE, JOSEPH (1823-1901). An eminent American geologist, the son of Louis Le Conte. He was born in Liberty Co., Ga., and graduated at Franklin College (University of Georgia) in 1841. After receiving a medical degree at the College of Physicians and Surgeons in New York City (1845), he returned to his native State to practice at Macon. In 1850 he entered the Lawrence Scientific School, Harvard, for the purpose of studying under Agassiz; the next year, after graduating B.S., he accompanied Agassiz on a scientific and exploring expedition to Florida. He served successively as professor of natural science in Oglethorpe College, professor of natural history in Franklin College, and from 1857 to 1869 as professor of chemistry and geology in the University of South Carolina. In 1869 he was appointed to the chair of geology in the University of California, which office he retained until his death. Professor Le Conte did much to popularize the study of geology in America and also contributed many valuable philosophical papers to geological literature. He was elected vice president of the International Geological Congress in 1891, in the following year president of the American Association for the Advancement of Science, and in 1896 president of the Geological Society of America. The more important of his publications are: *Religion and Science* (1873); *Elements of Geology* (1878, 5th ed., rev. by H. L. Fairchild, 1903); *Sight* (1881); *Compend of Geology* (1884); *Evolution: Its Nature, its Evidence, and its Relation to Religious Thought* (1887). Besides important papers contributed to geological journals, he wrote many essays on biology, philosophy, optics, and other subjects. Consult S. B. Christy in *Transactions of the American Institute of Mining Engineers*, vol. xxxi (New York, 1902), including bibliography, and *Autobiography*, edited by W. D. Arnes (ib., 1903). A review of his geologic work is printed in the *Bulletin of the Geological Society of America*, vol. xxvi (ib., 1915).

LE CONTE, LOUIS (1782-1838). An American naturalist, father of Joseph Le Conte. He was born near Shrewsbury, N. J., of Huguenot descent, graduated at Columbia in 1799, studied medicine with the celebrated Dr. David Hosack, and settled in Georgia, taking care of his father's estate and establishing a botanical garden, where he cultivated rare bulbous plants obtained from the Cape of Good Hope. He devoted considerable time to mathematics and zoology as well as botany. His manuscripts were lost at the burning of Columbia, S. C., in 1865.

LECONTE DE LISLE, le-kônt' de lêl, CHARLES MARIE (1818-94). The greatest French poet of the modern Parnassian school, born at Saint-Paul, on the Ile de Bourbon, now Réunion, Oct. 23, 1818. His youth in the tropics fostered his inborn love for the beauty of nature, but his restless imagination urged him to travel. Declining to follow his father's occupation as a planter, he went to France, studied law at Rennes, traveled widely, and at 30 settled in Paris. He presently sacrificed his paternal allowance by supporting a servile insurrection in Réunion. The only milestones in his uneventful life were the honors that slowly came to him—a post in the Luxembourg Library (1873), Officer's rank in the Legion of Honor, election to the Academy (1887). He became the centre of a school of young poets who recognized in the genial friend the master's authority. His first noteworthy volume, which waited several years for a publisher, was *Poèmes antiques* (1852), followed in 1854 by *Poèmes et poésies*, and in 1862 by *Poèmes barbares*, which won an academic prize of 10,000 francs, and by *Poèmes tragiques* in 1884. A posthumously published volume of *Derniers poèmes* (1895) contains several interesting critical essays on Leconte de Lisle's lyric forerunners. He was also the moving spirit of a series of volumes, *Le parnasse contemporain* (1866, 1869, 1876), in which the poets of his school practiced the refinements of their art. Here some of his own most remarkable poems first appeared. Leconte de Lisle contributed also to literature the first fairly accurate translations in French of the *Iliad* (1867), the *Orphic Hymns* (1869), *Hesiod* (1869), the *Odyssey* (1870), *Horace* (1873), *Sophocles* (1877), and *Euripides* (1885). He wrote also two dramas in imitation of the Greek, *Les Erinnyes* (1872) and *L'Apollonide*, based on the *Ion* of Euripides. The earlier of these translations won Leconte de Lisle a small pension from the Empire, and from these classical studies he drew the marrow of his exquisite culture, the pagan element in which appears least attractively in an *Histoire du christianisme* and a *Catéchisme républicain*, both published anonymously. The poems are objective in tone and scholarly in purpose, seeking, as he said, to unite, if not to mingle, art and science. His aim through all his original verse is to show the gradual unfolding of the ideal life and the reachings of religious thought into the legendary past and the hidden future of the race. He is the most stately, brilliant, self-possessed of French poets, with perfect control of all the processes of his art, but a poet of protest and disillusionment, pessimistic, skeptical. He died at Louveciennes, July 17, 1894.

Bibliography. Edward Dowden, "On Some French Writers of Verse," in *Studies in Literature, 1789-1877* (5th ed., London, 1889); Paul Bourget, *Nouveaux essais de psychologie contemporaine* (Paris, 1887); Jules Lemaitre, *Contemporains*, vol. ii (12th ed., ib., 1890); Ferdinand Brunetiere, *Nouveaux essais sur la littérature contemporaine* (ib., 1895); G. Whiteley, *Etude sur la langue et le style de Leconte de Lisle* (Oxford, 1910), containing a bibliography; Francis Grierson, *Parisian Portraits* (London, 1913). Biographical reminiscences are in *Revue des Deux Mondes* (Paris, May, 1895) and *Revue Bleue* (ib., June, 1895).

LECOT, le-kô', VICTOR LUCIEN SULPICE, CARDINAL (1831-1908). A French Roman Catholic cleric, born at Montescourt and educated at the minor seminary at Compiègne and at the grand seminary at Beauvais. He was appointed Bishop of Dijon in 1886, Archbishop of Bordeaux in 1890, and was created Cardinal in 1893. Although he condemned the Church Separation Law of 1901, he advocated a policy of conciliation that would enable the church to meet the new situation in France and was generally in sympathy with the sagacious and constructive endeavors of Aristide Briand (q.v.) to establish a programme that the church could accept.

LECOUVREUR, le-kôö'vrêr', ADRIENNE (1692-1730). A French actress, celebrated alike for her brilliant dramatic gifts and the tragic ending of her life of pleasure. She was born at Damery, near Epernay, April 5, 1692. Her father, a hatter, went to Paris to better his trade. Near the theatre of the Comédie Française, Adrienne, then a grown girl and a laundress, organized among the neighbors a little private theatre, which was so successful as to draw from the comedians of the Royal Theatre a complaint against it as an unauthorized rival. The amateur performances thus closed, Adrienne was taken by a kind prior to the actor Legrand, who was struck with her talent and beauty and gave her lessons in elocution. She played at Lille, Strassburg, and elsewhere, and after some years of provincial successes was called in 1717 to the Comédie Française, where she made her debut in Crébillon's *Electre*. She at once won the first place among French actresses. Her force of character, high spirit, and noble beauty gave all her impersonations the stamp of her individuality. Her favorite rôles were those of exalted passion, like Pauline, Monime, Bérénice, Athalie, and Phèdre. She delighted Paris, and for 13 years her real life, like her acting, was a stormy elysium, filled with the loves and galantries of the most eminent men of her time. She died in Paris, March 20, 1730, poisoned, it is said, by means of a bouquet of flowers sent by the Duchess de Bouillon, a rival mistress of Maurice de Saxe. Her story is the subject of a well-known drama by Scribe and Legouvé, which was first acted at the Théâtre Français by Rachel in 1849.

LECOY DE LA MARCHE, le-kwâ' de lá mârsh, ALBERT (1839-97). A French historian. He was born at Nemours and was educated at the Ecole des Chartes (1858-61). From 1861 to 1864 he was keeper of the departmental archives of Haute-Savoie and in the latter year became connected with the national archives at Paris. There he was professor of history at the Catholic Institute and in 1884 founded classes for the higher education of women. His writings, which are very numerous, are of very uneven merit: some, founded upon contemporary manuscripts, are excellent; others are works of vulgarization, evincing little scholarship and great bias. His most valuable works are *Le roi René* (1875); *La chaire française au moyen âge* (last ed., 1886); *Relations politiques de la France avec le royaume de Majorque* (1892).

LECTERN (also *lectern, lettron*, from OF. *lettrin, lettron*, *leutrin*, Fr. *lutrin*, from ML. *lectrinum, lectrum*, reading desk, from Gk. *λέκτρον, lektron*, couch). A reading desk or stand, movable or stationary, from which the Scripture lessons (*lectiones*), which form a part of the various Church services, are chanted or read.

The term is properly applied only to the class mentioned as independent of the pulpit. Such lecterns were either fixed or movable; when fixed, they were sealed to the pavement in the centre of the choir and were made of wood or metal—ordinarily brass or latten. The light, movable lecterns, usually of iron or wood, are less decorative. The lectern is of very ancient use, from the early Christian period, and it is still used by some Christian churches, especially the Catholic and Episcopal. It is made of various materials—gold, silver, bronze, brass, marble (plain or inlaid), or wood. It either has an independent base or stand, or else is part of the pulpit (q.v.), or ambone. None of the lecterns in precious metal have been preserved, but descriptions of such stands, in the *Liber Pontificalis*, show them to have been in early use and to have been flanked with candelabra. The earliest preserved are the stationary marble lecterns on pulpits in Italy, as on those of San Lorenzo and the Araceli in Rome. Richer are the lecterns on pulpits of the Pisan Tuscan school of the twelfth, thirteenth, and fourteenth centuries, especially those carved by the Pisan sculptors Nicola and Giovanni. (See PISANI.) In these examples an eagle with outspread wings supported the booklike slab, and it rested upon a composite group of the three other living creatures, symbols of the Evangelists—the Angel, the Lion, and the Bull. Usually only the eagle was carved under the book, and this became the normal type of lectern preserved to the present time. So usual was it to make the eagle the central ornament that the mediæval name for this choir lectern was ordinarily *aquila*; but sometimes the pelican was substituted (wooden lectern of fifteenth century at Zammel). This was often the case in the fifteenth and sixteenth centuries with the weakening of the old religious traditions, when other figures were substituted, such as griffins, angels, or men, contrary to true iconography. Sometimes, as in the case of the iron lectern at Tournai Cathedral, there is no figured decoration. During the Gothic and Renaissance periods the churches of central and northern Europe were decorated with beautifully carved lecterns, and even in Italy there were many inlaid with intarsia, or carved, in connection with the choir stalls, like that of Santa Maria in Organo, Verona.

LECTIONARY (ML. *lectionarium, lectionarius*, book of lessons, from Lat. *lectio*, lesson, reading, from *legere*, to read, Gk. *λέγειν, legein*, to say). In the mediæval Church, a book containing the portions of Scripture to be read in public worship. There are two lectionaries which deserve special notice. The first is the so-called "Roman lectionary," which contained the epistles and gospels of the Roman missal and sometimes all the lessons of all the various services in use in the Roman church, in which case it was named the *plenarium*. The most ancient form of the Roman lectionary was called *comes* or *liber comitis*. Its compilation was attributed to St. Jerome, and it appears certain that it belongs in substance, although not in form or in details, to his age. The collection was revised and remodeled in the eighth century. The second of the ancient lectionaries is that known as the "Gallican lectionary," which was published by Mabillon from a manuscript of the monastery of Luxeuil, and which is believed to represent the rite of the ancient Gallican church.

It is, however, imperfect, and no other copy has since been discovered.

LECTISTERNIUM (Lat., a couch spreading, from *lectus*, couch + *sternere*, to spread). A sacrificial ceremony among the ancient Romans. It had its analogue among the Greeks in festivals called *θεοξένια*, *theoxenia*; indeed, there are reasons for believing that the Romans derived the custom from the Greeks. On occasions of extraordinary solemnity figures of the greater deities were placed reclining or seated on the sacred *pulvinar*, or cushioned seat, set in the streets before the shrines, and a feast was spread on tables before them. Such a ceremony was first ordained by the Sibylline Books (see *SIBYL*) on the occasion of a pestilence in 399 B.C. Generally the gods were placed on the couches, reclining as men reclined at meals, on their left arms, in pairs, as Apollo and his mother Latona, Diana and Hercules, Mercury and Neptune. The ceremony was earlier resorted to in times of trouble, with the idea of appeasing the angry deities, but later also (and particularly) on occasions of general exultation, as a part of the *supplicatio*, or thanksgiving; the ceremonies then lasted for many days. In Imperial times it was customary to represent the female deities seated, when the ceremony was technically called *sellisternium*. The images were generally of wood, with heads of clay, wax, or marble, and were fully draped. Consult: the articles "Lectisternium" and "Theoxenia," in William Smith, *A Dictionary of Greek and Roman Antiquities* (3d ed., London, 1890-91); W. W. Fowler, *Roman Festivals* (London, 1899); Georg Wissowa, *Religion und Kultus der Römer* (2d ed., Munich, 1912).

LECYTHUS, lēs'ī-thūs. See *VASE*.

LEDA. A genus of small, elongate, concentrically striated lamellibranchs with a taxodont hinge like *Nucula*. It is chiefly notable for its longevity, for it ranges from the Silurian to recent times. It is an important shell in some of the marine Pleistocene deposits, as in the so-called Leda clays of eastern Canada. See *PELECYPODA*.

LEDA (Lat., from Gk. Λήδα). In Grecian legend, the wife of the Spartan King Tyndareus, whom Zeus visited in the disguise of a swan. She became the mother by Zeus of Pollux and Helen and by Tyndareus of Castor and Clytemnestra. In Homer only Helen is the child of Zeus (*Iliad*, iii, 426). Others made Helen the daughter of Nemesis and Zeus and merely a foster child of Leda; the egg which resulted from the union of Nemesis and Zeus, masquerading as swan, Leda found and cherished. In yet another story, alluded to by Horace, *Sermones*, ii, 1, 26, 27, Castor and Pollux, sons of Leda, were both born from one egg. Leda with the swan was a favorite theme in ancient art; the theme has been treated, too, by many modern artists. Consult C. M. Gayley, *The Classic Myths in English Literature and Art* (2d ed., Boston, 1911), and Friedrich Lübker, *Reallexikon des klassischen Altertums*, vol. ii (8th ed., Leipzig, 1914). See *CASTOR* and *POLLUX*.

LEDEBOUR, lā'de-bōōr, KARL FRIEDRICH VON (1785-1851). A German botanist, born at Stralsund. At the age of 20 he became director of the botanical garden and professor of botany at Greifswald, which positions he held until 1811, when he went to Dorpat. He remained there until 1836 and from then until his death resided mainly in Germany. His most impor-

tant writings are: *Reise durch das Altaigebirge* (2 vols., 1829-30); *Icones Plantarum Novarum Floram Rossicam* (5 vols., 1829-34); *Flora Rossica* (3 vols., 1842-51).

LEDEBUR, lā'de-bōōr, LEOPOLD, BARON (1799-1877). A German historian, born in Berlin. In the new Berlin Museum he was appointed director of the art department of the Museum for German Antiquities and of the ethnographical collection and served there until 1875. His more important books include *Das Land und Volk der Brukterer* (1827) and *Blicke auf die Litteratur des letzten Jahrzehnts zur Kenntnis Germaniens zwischen Rhein und Weser* (1837). In 1863-65 he was editor of the *Archiv für deutsche Adelsgeschichte, Genealogie, Heraldik und Sphragistik*, a journal for genealogy and heraldry.

LE DENTU, le dān'tu', AUGUSTE (1841-). A French surgeon and writer on surgical questions. Born at Basse-Terre (Guadeloupe), he was trained in the Faculty of Medicine at Paris, where he was afterward professor of clinical surgery. He was surgeon at the Hôtel Dieu, became a member of the Academy of Medicine, served as president of the surgical society, and in 1898 was president of the congress of surgery. He wrote: *Traité des maladies de la prostate et de la vessie; Affections chirurgicales des reins et des uretères* (1889); *Etudes de clinique chirurgicale* (1892); *Le cancer du sein* (1902); *Clinique chirurgicale* (1904); *Visions d'Egypte* (1911). In 1895-1901, with Pierre Delbet, he edited a *Traité de chirurgie clinique et opératoire* and in 1908-09, also with Delbet, a *Nouveau traité de chirurgie*.

LEDESMA BUITRAGO, lā-dēs'mā bwē-trā'gō, ALONSO DE (1562-1633). A Spanish poet, born at Segovia. He first became known as the author of the *Conceptos espirituales* (Madrid, 1600) and *Juegos de nochebuena* (ib., 1611). These volumes established the cult of the *conceptistas*. It was a school of impossible conceits and paradoxes, and in order to make the whole scheme mystical, a curious vocabulary became part of the system. Other works are *Romancero y monstruo imaginado* (Madrid, 1615) and *Epigramas y hieroglíficos á la vida de Cristo* . . . (ib., 1625). Quevedo was the most celebrated disciple of this school, and its influence extended to Lope de Vega. Rivadeneira's *Biblioteca de autores españoles*, vol. xxxv (Madrid, 1872), contains a selection of the works of Ledesma.

LEDOCHOWSKI, lā'dō-kōf'ské, MIECZYSLAW, COUNT (1822-1902). A Roman Catholic ecclesiastic. He was born at Gorki, near Sandomir, in Russian Poland, of an ancient Polish family, educated by the Lazarists at Warsaw and the Jesuits in Rome, and ordained priest in 1845. He soon attracted the favorable notice of Pius IX, who made him a domestic prelate and prothonotary apostolic. After filling various diplomatic posts at Madrid, Lisbon, Rio de Janeiro, Santiago, and Brussels, he was raised to the episcopate in 1861 as titular Archbishop of Thebes. On the nomination of the Prussian government he was appointed in 1866 to the metropolitan see of Posen and Gnesen, but, dissatisfied with the attitude of the government in 1870, when his request for German intervention in favor of the Pope was disregarded, he took the lead in the ultramontane opposition and did much to encourage the Polish national movement. In 1873 the determined stand which

he took against the May Laws in the Kulturkampf (q.v.) caused him to be imprisoned for two years at Astrowo. At the beginning of his captivity the government deprived him of his see; the Pope, however, made him Cardinal in 1875, and after his release he resided in Rome, formally resigning his archbishopric in 1886. From 1892 until the time of his death he occupied the important position of Prefect of the Propaganda. See MISSIONS, CHRISTIAN.

LEDOCHOWSKI, WŁODIMIR (1866-). General of the Society of Jesus. Of a Russian-Polish family, his uncle being Count Mieczysław Ledochowski, he was born in Austria and as a boy was a page of the Empress Elizabeth. He graduated from the Vienna Gymnasium and then studied at the seminary at Tarnow, Galicia, and at the Germanicum in Rome. Entering the Society of Jesus in Galicia in 1889, he became a priest in 1894, afterward, having rapidly gained a reputation as a preacher and as a writer on sociology, he was appointed by his order vice provincial for Poland and in 1902 provincial. He is thought to have been a favorite candidate for the generalship in 1906, when Father Wernz was elected; but instead he was elected assistant general over the provinces of the Netherlands, Hungary, Austria, Germany, Galicia, and Belgium. However, Father Wernz having died late in 1914, Ledochowski was chosen his successor in February of the next year.

LE'DO SAL'INA'RIOUS. See LONS-LE-SAUNIER.

LEDOUX, le-doo', ALBERT REID (1852-). An American mining engineer, born at Newport, Ky. Educated at the Columbia School of Mines (1870-73) and at the universities of Berlin (1873-75) and Göttingen (Ph.D., 1875), he served as State chemist and member of the State Board of Health of North Carolina from 1876 to 1880 and thereafter was a consulting engineer, metallurgist, assayer, and chemist. For two years he was an expert for the New York Electrical Subway Commission, and he acted as receiver of the Harney Peak Tin Mining Company. In 1903 he served as president of the American Institute of Mining Engineers. He published *Princess Anne, A Story of the Dismal Swamp* (1896).

LEDOUX, LOUIS VERNON (1880-). An American poet, born in New York, a son of Albert Reid Ledoux. He graduated in 1902 from Columbia University, then spent a year in graduate study there, and subsequently became associated with his father in the firm of Ledoux and Company, metallurgists. Much of his time, however, he devoted to literature. His poetry, whether it takes its impulse direct from nature and the life about him or puts fresh thought and feeling into classic myth and legend, is fine in texture, firm in structure, and everywhere bespeaks the exacting artistic conscience that keeps all his finished verse well above the levels of the facile and the careless. His published work includes: *Songs from the Silent Land* (1905); *The Soul's Progress and Other Poems* (1907); *Yzdra* (1909); *The Shadow of Etna* (1914).

LEDRAIN, le-drän', EUGÈNE (1844-1910). A French archaeologist, born at Sainte-Suzanne (Mayenne). He was at first a priest, but afterward devoted himself especially to the study of Oriental archaeology. He became one of the curators of the department of Oriental an-

tiquities in the Louvre and professor at the school attached to that museum. He was fond of controversies on literary or archaeological subjects. Ledrain was editor of *The Revue d'Assyriologie et d'Archéologie Orientales* and the writer of many books, including: *Un grand seigneur féodal dans la Moyen-Egypte, dix siècles avant Moïse* (1876); *L'Assyrie, l'Égypte et Israël* (1877); *Les momies gréco-égyptiennes* (1877); *La stèle du collier d'or* (1877); *Histoire d'Israël* (1879-82); *Les monuments égyptiens de la Bibliothèque Nationale* (1880-81); *La Bible, traduction nouvelle d'après les textes hébreu et grec* (1886-99); *Dictionnaire des noms propres palmyréniens* (1886); *Musée National du Louvre, Monuments araméens et himyarites* (1886); *Dictionnaire de la langue de l'ancienne Chaldée* (1897).

LEDRU-ROLLIN, le-dru'-rô'lân', ALEXANDRE AUGUSTE (1807-74). A noted French radical. He was born Feb 2, 1807, at Fontenay, near Paris, in a house which had once been Scarron's. He studied for the bar and was admitted in 1830. He was counsel for the defense in most of the prosecutions of opposition journals during the reign of Louis Philippe and obtained a great reputation as a defender of republicans. In 1841 he was elected deputy by the Department of Sarthe and became prominent in the Chamber as a member of the extreme Left. He was the editor of several of the most advanced newspapers of the day and the author of pamphlets and protests against the repression of public and individual liberties. In 1846 he published an *Appel aux travailleurs*, in which he declared his attitude towards the working classes. He was also an ardent promoter of the reform meetings that preceded the revolution of 1848, being associated with Lamartine and Louis Blanc as an orator of the workingmen, at whose political banquets he advocated the *droit au travail* (right to labor) and universal suffrage. On the outbreak of the Revolution he became one of the leaders and advocated the formation of a provisional government, and when this was carried out, he was intrusted with the portfolio of the Interior. He was afterward one of the five in whose hands the Constituent Assembly placed the interim government (May 10, 1848). In this position he showed a certain want of perception, firmness, and energy. In June, 1848, he ceased to hold office and thenceforth sought to recover his influence with the extreme democrats, which he had partly lost by accepting office. He succeeded partially and ventured on a candidature for the presidency, obtaining, however, only 370,000 votes (December, 1848). In May, 1849, he was chosen to the Legislative Assembly, but the unsuccessful protest of June 13 against Louis Napoleon's government put an end to his political career. He fled to England and became later on associated in London with Mazzini, Kossuth, and other European revolutionists in the issuing of republican manifestoes. While there he wrote and published a work against the land which had given him an asylum, *La décadence de l'Angleterre* (1850). For the next 20 years he lived alternately in London and Brussels. His name was excepted from the amnesties of 1860 and 1869, but in 1870 he was allowed to return to France. In February, 1871, he was returned to the National Assembly, but at once resigned. Later (1874) he sat as a member of the extreme Left in the Versailles

Assembly, where he made his last great oration, June 3, 1874, in favor of universal suffrage, the adoption of which in France is due to his incessant agitation. He died Dec. 31, 1874. His *Discours politiques et écrits divers* was published by his widow (2 vols., Paris, 1879).

LEDUM (Neo-Lat., from Gk. λῆδον, *lēdon*, from Ar. *lādan*, *ladanum*). A genus of plants of the family Ericaceæ, consisting of evergreen shrubs, with small, clustered, white flowers. The species are natives of the colder parts of Europe, Asia, and North America, some of them common to both continents. The leaves of *Ledum groenlandicum* are said to be used in Labrador as a substitute for tea, whence it is sometimes called Labrador tea. Sir John Franklin and his party, in the Arctic expedition of 1819-22, used *Ledum palustre* in the same way to produce a beverage with a smell resembling rhubarb. They found it refreshing. The leaves of both these shrubs possess narcotic properties and have been used as a substitute for hops in beer. They are regarded as useful in dysentery and diarrhœa, since they contain tannin. They are also used in the preparation of certain kinds of leather, as Russia leather.

LEDYARD, JOHN (1751-88). An American traveler, born at Groton, Conn. His father dying early, Ledyard was brought up by his paternal grandfather at Hartford. At first he studied law, but in 1772 entered Dartmouth to fit himself for a missionary career. Soon absenting himself, he spent several months with the Iroquois and in 1773 went as a common sailor to Gibraltar, where he enlisted in a British regiment, from which, however, he was almost immediately discharged. He returned to America, but in 1776 went to England and, as a corporal of marines, accompanied Captain Cook on his last voyage (1776-79). In 1782, while on a man-of-war off Long Island, he deserted, but in June, 1784, returned to England, where and in Paris he made fruitless efforts to organize an exploring expedition to the northwest coast of North America. He then, with the assistance of Sir Joseph Banks, undertook a tour of exploration in the extreme north of Europe. Starting from Stockholm on foot (December, 1786), he traversed the coast line of the Gulf of Bothnia and arrived at St. Petersburg early in 1787. He penetrated as far as Lake Baikal and Yakutsk, but on his return to Irkutsk he was arrested by order of the Russian government and was subsequently expelled from the country with orders not to return. He reached London with the greatest difficulty, but almost immediately—on behalf of the African Association—started on an expedition to the interior of Africa. At Cairo, however, he became ill and died (probably in November, 1788), from the effects of an overdose of vitriol. A journal which he kept during Captain Cook's voyage had been confiscated by the British government, but in 1782 he published an account from memory which became very popular. Some of his papers were also published after his death by the African Association. Consult Jared Sparks, in *American Biography*, vol. xxiv (Boston, 1828).

LEDYARD, Lewis Cass (1851-). An American lawyer and capitalist, born in Michigan and educated at Harvard University (A.B., 1872; LL.B., 1875). He established himself as a practicing attorney in New York City and subsequently became president of the Franklin

Building Company, director of many important railroads and other corporations, and trustee of the United States Trust Company and of the Atlantic Mutual Insurance Company. He served also as vice president of the New York Public Library and as president of the Lying-in Hospital. In 1914, with other directors of the New York, New Haven, and Hartford Railroad, he was indicted for conspiracy to monopolize the means of interstate transportation in New England.

LEDYARD, WILLIAM (c.1740-81). An American soldier, born at Groton, Conn. He was one of the Committee of Correspondence chosen at Groton on the closing of the port of Boston by Parliament and in 1776 was appointed by the Connecticut Assembly, of which he was a member, to be captain of an artillery company, which it was proposed to raise for the purpose of garrisoning the forts at New London. In March, 1778, he was promoted to be colonel and was appointed to command the posts at New London, Stonington, and Groton. On Sept. 6, 1781, a large British force under Benedict Arnold landed at the mouth of the Thames and advanced against New London. Ledyard was summoned to surrender, but, though he had only some 150 ill-armed militia with him in Fort Griswold, refused, hoping to be able to withstand the British until the countryside could arm. After an obstinate resistance the fort was taken by storm, and Colonel Ledyard surrendered. Major Bromfield, to whom he gave up his sword, plunged it into his breast, and then the soldiers, imitating their commander's example, murdered the greater number of their defenseless captives. Arnold in his report makes no mention of this massacre. A monument in commemoration was erected on the site of Fort Griswold. See GROTON.

LEE. A town, including the villages of South Lee and East Lee, in Berkshire Co., Mass., 11 miles by rail south of Pittsfield, on the Housatonic River and on the New York, New Haven, and Hartford Railroad (Map: Massachusetts, A 3). It is in a region noted for its beautiful scenery and popular as a summer resort. The town has a public library. There are extensive quarries of fine white marble, which has been used in the construction of many well-known buildings. Marble quarrying and the manufacture of paper are the principal industries. The government is administered by town meetings. Settled in 1760, Lee was incorporated in 1777 and was named in honor of Gen. Charles Lee (q.v.). Pop., 1900, 3596; 1910, 4106. Consult Hyde and Hyde, *Centennial History of Lee* (Lee, 1878), and *Records of the Town of Lee* (ib., 1900).

LEE (AS. *hlēo*, shelter, Icel. *hlē*, Dan. *læ*, lee). The quarter or direction towards which the wind blows and the opposite direction from *weather*, which is the point or quarter from which it blows. To get *under the lee* of an object means to have that object between you and the wind, so as to get less wind or a smoother sea. To *leeward* is towards the *lee*, away from the direction from which the wind comes. The *lee anchor* (in the case of a ship moored with two anchors) is the one by which she is not riding. A *leeboard* is a small board placed on the lee side of a small boat to keep her from drifting to leeward; it was the prototype of the centreboard so much used in shallow-built vessels.

LEE, ALFRED (1807-87). An American Protestant Episcopal bishop. He was born at Cambridge, Mass., graduated at Harvard in 1827, and, after three years' practice of the law at New London, Conn., studied for the ministry, graduating at the General Theological Seminary, New York, in 1837. He was rector of Calvary Church, Rockdale, Pa., from 1838 to 1841, when he was chosen first bishop of Delaware. In 1842 he also became rector of St. Andrew's, Wilmington. He was a member of the American Committee for the Revision of the New Testament (1881) and in 1884 succeeded Bishop Smith as presiding bishop of the Protestant Episcopal church of the United States. Lee wrote: *Life of Saint Peter* (1852); *Life of Saint John* (1854); *A Treatise on Baptism* (1854); *Memoir of Susan Allibone* (1856); *Harbinger of Christ* (1857); *Cooperative Revision of the New Testament* (1881).

LEE, ALGERNON (1873-). An American Socialist and journalist. He was born at Dubuque, Iowa, and studied at the University of Minnesota. He became an active Socialist in 1895; was a delegate to the Socialist National Convention, Chicago, in 1904 and to the International Socialist Congresses at Amsterdam in 1904 and at Stuttgart, Germany, in 1906; and served on the Socialist National Committee in 1906. He edited the *Tocsin*, Minneapolis, in 1898-99 and the *Worker*, New York, from 1899 to 1908 and became a department editor of the *Metropolitan Magazine*. In 1909 he became secretary of the Rand School of Social Science in New York City.

LEE, ANN (1736-84). The founder of the Shakers in America. She was born in Manchester, England, Feb. 29, 1736. In 1758 she became connected with Quakers, or Shakers, a sect established by seceders from the Friends who, in their meetings, exhibited fits of trembling, whence their name. At an early age she had married Abraham Stanley (or Standerlin). She was at the time a cook, he a blacksmith, and both were unable to write. In 1770 she claimed to have a revelation that strict continence was enjoined. For preaching this doctrine and other peculiarities of the Shaking Quakers' faith, such as the nearness of the Second Advent, and for her alleged visions, prophecies, and power of working miracles, she was much persecuted and several times imprisoned; but, on the other hand, so endeared herself to her coreligionists that they yielded to her leadership and called her Mother Ann. To escape persecution she came with her husband and some followers to America in 1774. In 1776, having separated herself entirely from her husband, she established at Niskayuna (now Watervliet), near Troy, N. Y., the first Shaker community. During the Revolutionary War she was imprisoned, with some of her followers, because they refused to bear arms. Released in 1781, she traveled on a missionary tour. She died at Watervliet, Sept. 8, 1784. See SHAKERS.

LEE, ARTHUR (1740-92). One of the American representatives in Europe during the Revolutionary War, youngest son of Thomas Lee and brother of Richard Henry Lee and Francis Lightfoot Lee. He was born in Stratford, Westmoreland Co., Va., Dec. 20, 1740, and was educated at home in Virginia, at Eton, and at the University of Edinburgh, where he received the degree of M.D. After travel on the Continent he returned to Virginia and began the practice

of medicine at Williamsburg. Soon, however, abandoning this, he proceeded in 1766 to London, where he continued the study of law until 1770 and successfully practiced his profession there until 1776, taking an effective share in the political pamphleteering of the time. Upon Franklin's return to America early in 1775, Lee succeeded him as the agent of Massachusetts, and late in the same year he was appointed by the Committee of Secret Correspondence of the Continental Congress as its secret agent in London. In this capacity, also, he spent much of the following year at Paris and in October, 1776, was appointed by the Continental Congress one of its commissioners to France. Early in 1777 he was sent as a commissioner of the United States to Spain, but was not received officially and accomplished little beyond securing a small loan. Upon his return from Spain he went informally, in the summer of 1777, to the courts of Austria and Prussia for the purpose of securing aid or, at least, of establishing cordial relations. Meanwhile, until the appointment of Jay, he continued to act as Commissioner to Spain, though he did not revisit that country. With Franklin and Deane he signed the treaties concluded between France and the United States in February, 1778. The importance of his services and the extent of his influence were greatly diminished by his bitter opposition to Franklin. Under rather inauspicious circumstances he returned to America in the summer of 1780 and retired temporarily to private life. In the spring of 1781 Prince William County sent him to the Virginia Legislature, by which body, at the close of the year, he was sent to the Continental Congress, where he remained until 1785. In 1784 he was one of the commissioners who negotiated the Treaty of Fort Stanwix (q.v.) with the Indians of the northern and northwestern frontiers. From 1784 to 1789 he was also a member of the Treasury Board, and he was one of the commission created in 1786 to revise the laws of Virginia. On the establishment of the new national government he retired finally to private life and died after a brief illness, Dec. 12, 1792. Consult: R. H. Lee, *Life of Arthur Lee, with his Political and Literary Correspondence* (2 vols., Boston, 1829); Francis Wharton (ed.), *Revolutionary Diplomatic Correspondence of the United States*, vol. i (Washington, 1889); C. H. Lee, *A Vindication of Arthur Lee* (Richmond, 1894). The Arthur Lee manuscripts are to be found in the library of Harvard University.

LEE, BLAIR (1857-). An American legislator and lawyer, born at Silver Spring, Montgomery Co., Md.. After graduating from Princeton in 1880 and from the law department of Columbian (now George Washington) University in 1882, he practiced his profession in Maryland and in the District of Columbia. In politics he became known as a Democrat of progressive and liberal tendencies. He was an unsuccessful candidate for Congress in 1896, served prominently as a party leader in the Maryland State Senate from 1905 to 1913, and was defeated as candidate for the gubernatorial nomination in 1911 by a vote of 64 to 65 in the convention. Supported enthusiastically by the Wilson administration, he was elected United States Senator in 1913 to fill the unexpired term of Senator Jackson (ending in 1917).

LEE, CHARLES (1731-82). A British-Ameri-

can soldier, born at Dernhall, Cheshire, England. He received a commission as lieutenant in the British army in 1751, accompanied Braddock's expedition in 1755, and in 1758 was wounded at Ticonderoga and was promoted to a captaincy. In 1762 he served with conspicuous gallantry in Portugal and received a commission from that country as a lieutenant colonel under Burgoine who had been sent by England to assist Portugal against Spain. In 1764-66 and again in 1769-70 he served in the Polish army, first as a staff officer under King Stanislas Augustus and later as a major general in the Turkish campaign. After much intriguing he became a lieutenant colonel on half pay in the British service in May, 1772, and in the fall of 1773 emigrated to America, where he used every effort to ingratiate himself with the Patriot party, whose side he took with great ostentation. Several political pamphlets which he wrote at this time became very popular. In 1775 he bought a farm in Berkeley Co., Va. In the same year he was appointed by Congress to the second major-generalship in the Continental army and became senior major general, next in rank to Washington on the resignation of Gen. Artemas Ward. In 1776 he was placed in command of the Southern Department and received most of the credit for the defense of Charleston, though he had opposed and ridiculed Moultrie's plans. In October he took command of the right wing of the American army near New York. Disregarding Washington's orders, he delayed his retreat into New Jersey for two weeks and then proceeded with great deliberation. On December 13, while at Basking Ridge, a few miles from his army at Morristown, he was captured by British dragoons and was taken to New York. Here he betrayed the American plans to the British, but in May, 1778, his treason not being suspected by Washington, he was exchanged. For his conduct at the battle of Monmouth (q.v.) he was convicted by court-martial of disobedience, misbehavior before the enemy, and disrespect to the commander in chief, and was suspended from his command for a year. Soon afterward he was wounded in a duel with Col. John Laurens, one of Washington's aids, and, on addressing an impudent letter to Congress, was dismissed from the service. He retired to his farm, and in 1782, while on a visit to Philadelphia, he died. Consult G. H. Moore, *The Treason of Charles Lee* (1858), and John Fiske, *Essays Historical and Literary* (New York, 1902).

LEE, ELIZA (BUCKMINSTER) (1792-1864). An American author, the daughter of Joseph Buckminster. She was born at Portsmouth, N. H.; was well educated by her father and brother, Joseph Stevens Buckminster; married a Thomas Lee of Boston; became a writer; and was unusually felicitous in her descriptions of New England life. She wrote, notably: *Sketches of New England Life* (1837); *Naomi, or Boston Two Hundred Years Ago* (1848); and memoirs of her father and brother (1849). She translated from the German, wrote a life of Richter (1842), and published an historical novel, *Parthenia, the Last Days of Paganism* (1858).

LEE, FRITZTGH (1835-1905). An American soldier, nephew of Robert E. Lee, and prominent as a Confederate officer during the Civil War. He was born in Clermont, Va.; graduated at West Point in 1856 and was appointed to the Second Cavalry; served against the Comanche

Indians in Texas; and was severely wounded in 1859. From May, 1860, until the outbreak of the Civil War he was instructor of cavalry at West Point. He resigned from the Federal service early in 1861, entered the Confederate army, and until September of that year was adjutant general in General Ewell's brigade. From September, 1861, he served as lieutenant colonel, and from April, 1862, as colonel of the First Virginia Cavalry in the Army of Northern Virginia. In this capacity he served in nearly all the important operations of the Army of Northern Virginia; was appointed brigadier general in July, 1862, and major general in September, 1863; was severely wounded at Winchester, Va., on Sept. 19, 1864; and from March, 1865, until his surrender to General Meade at Farmville, was in command of all the cavalry of the Army of Northern Virginia. In 1874 he delivered a patriotic address at Bunker Hill, which attracted considerable attention; in 1882-83 he made a lecturing tour through the South on behalf of the Southern Historical Society; and from 1886 to 1890 he was Governor of Virginia. He was appointed collector of internal revenue for the western district of Virginia in 1895 and in 1896 was sent to Cuba by President Cleveland as Consul General at Havana. In April, 1898, when war with Spain appeared inevitable, he was recalled, along with all the other American consuls, and in May was appointed major general of volunteers and placed in command of the Seventh Army Corps. In January, 1899, he became military governor of Havana and subsequently was placed in command of the Department of Missouri. He retired as a brigadier general, U. S. A., in 1901. He published *Robert E. Lee* (1894), in the "Great Commanders Series," and *Cuba's Struggle against Spain* (1899).

LEE, FRANCIS LIGHTFOOT (1734-97). An American patriot and one of the signers of the Declaration of Independence. He was born at Stratford, Westmoreland Co., Va., and was the fourth son of Thomas Lee and the brother of Richard Henry Lee and Arthur Lee. He was educated by private tutors and upon the death of his father inherited a considerable fortune. He established himself on his large estates on the banks of the Rappahannock and lived there the quiet, easy life of a Virginia gentleman. A sincere patriot, he was willing to risk all in the cause of the Colonies. He served for 10 years (1765-75) in the Virginia House of Burgesses and in 1775 was elected a member of the Continental Congress, in which he served until 1779, signing the Declaration of Independence in 1776 and taking part in the work of framing the Articles of Confederation. After his retirement from Congress his only participation in public affairs was a term in the Senate of his native State.

LEE, FREDERIC SCHILLER (1859-). An American physiologist. Born at Canton, N. Y., he graduated from St. Lawrence University in 1878 and from Johns Hopkins (Ph.D.) in 1885. He served as an instructor at St. Lawrence (1886-87) and as an instructor and associate at Bryn Mawr College (1887-91). At Columbia University he was a demonstrator in physiology in 1891-95, adjunct professor from 1895 to 1904, Dalton professor after 1904, and Jessup lecturer in 1911. He became an associate editor of the *American Journal of Physiology* in 1898 and of the *Columbia University Quarterly* in 1900. In

1912-14 he was president of the Harvey Society. He revised and edited Huxley's *Lessons in Elementary Physiology* (1900) and is author of *Scientific Features of Modern Medicine* (1911).

LEE, GERALD STANLEY (1861-). An American lecturer, critic, and author, born at Brockton, Mass. He graduated at Middlebury College (Vt.) in 1885, studied for three years at the Yale Divinity School, and was a Congregational minister in Minnesota, Connecticut, and Massachusetts until 1896. In 1897 he married Jennette Perry. (See LEE, JENNETTE.) He lectured on literature and the arts in modern times, contributed to magazines, edited *Mt. Tom, an All Out-Doors Magazine*, and wrote: *About an Old New England Church* (1893); *The Shadow Christ* (1896), a study of the Hebrew poets; *The Lost Art of Reading* (1902); *The Child and the Book* (1902); *The Voice of the Machines* (1906); *Inspired Millionaires* (1908); *Crowds* (1913); *Crowds, Jr.* (1914).

LEE, HARRIET (1757-1851). An English author, born in London. With her sister Sophia she secured a competence by the successful management of a private school and resided in the vicinity of Tintern Abbey and afterward at Clifton. Here she wrote, among other works, the novel *The Errors of Innocence* (5 vols, 1786) and a comedy, *The New Peerage* (1787). She is best known, however, for her *Cunlbury Tales* (5 vols, 1797-1805), which were republished in New York in 1857. In this work she was assisted by her sister Sophia, but of these tales all except two were written by Harriet. The best known is *Krutzner*, which (1821) was dramatized by Byron and published, with due acknowledgment, under the title of *Werner, or the Inheritance*.

LEE, HENRY (1756-1818). An American soldier and statesman, a member of the famous Lee family of Virginia, born at Leesylvania, one of the family estates on the Potomac. He graduated at Princeton in 1773 and soon after the outbreak of the Revolutionary War obtained a captaincy in Col. Theodorick Bland's cavalry legion. In 1777 he joined Washington just before the battle of Brandywine and from that time on for three years was employed in scouting and outpost duty, in which his restless activity earned him the nickname of Light Horse Harry. He assisted General Wayne at the capture of Stony Point and soon afterward commanded an expedition of his own which surprised and captured the British post at Paulus Hook (see JERSEY CITY) in 1779, an exploit which won for him the thanks of Congress and the commendation of Washington. In 1780, having been promoted lieutenant colonel, his legion was sent to the Southern States to aid in retrieving the disaster at Camden and, during General Greene's skillful retreat through the Carolinas, formed the rear guard of the American forces. After the tide had turned and Greene was once more advancing southward, the legion took an important part in the recovery of places held by the British and did brilliant service at Eutaw Springs (q.v.). Early in 1782 Lee resigned his commission because of ill health and retired to Virginia, where, after the conclusion of peace, he interested himself in politics. In 1786 he was elected a delegate to the Continental Congress and two years later representative of Westmoreland County in the Virginia convention which ratified the Federal Constitution. From 1789 until 1791 he was a member

of the State Legislature and from 1792 till 1795 was Governor of Virginia. While he was still an incumbent of this latter office (1794), Washington appointed him to command the 15,000 troops whose mere presence quelled the Whisky Insurrection. Five years later he entered Congress and there, after Washington's death, delivered the funeral oration which contains the familiar phrase, "First in war, first in peace, first in the hearts of his countrymen." In 1801 he retired to private life, to appear again on the stage of public affairs only for a brief moment in 1812, when, after the first disasters to the American arms in Canada, he accepted an appointment as major general. But before he could enter upon his new military duties he was wounded while aiding a friend, Alexander Contee Hanson (q.v.), editor of the *Baltimore Federal Republican*, whose property was attacked by a mob of political opponents. Lee never recovered from this injury and died while on his return from a voyage to the West Indies, taken in the hope that a change of climate might prove beneficial. He wrote *Memoirs of the War in the Southern Department of the United States* (1812), to the new edition of which (1869) is prefixed a biography by his son, Robert E. Lee (q.v.). Consult also J. T. Morse, *Memoir of Col. Henry Lee, with Selections from his Letters and Speeches* (Boston, 1905).

LEE, JAMES PRINCE (1804-69). An English bishop, born in London. He studied at St Paul's School and graduated M.A. from Trinity College, Cambridge, in 1831. He was a master at Rugby School under Dr. Arnold from 1830 to 1838, when he became head master of King Edward's School at Birmingham. Ordained in 1830, he was elected honorary canon of Worcester in 1847 and in the following year was nominated by Lord John Russell the first Bishop of the newly created see of Manchester. A great exponent of church extension, he consecrated 130 churches from 1848 to 1869. He was one of the promoters of the Manchester Free Library.

LEE, JENNETTE (BARBOUR PERRY) (1860-). An American novelist and college professor, born in Bristol, Conn. From 1890 to 1896 she was connected with the English departments of Vassar and of the College for Women of Western Reserve University. In the year last named she married Gerald Stanley Lee (q.v.) and five years later became professor of English language and literature at Smith College. Of her fiction the best example is perhaps *Uncle William* (1906), in the hero of which the reader is pleased to meet a quaint and most amiable bit of simple and kindly, yet shrewd, seaside rusticity. In 1907 appeared a work of a different stripe—*The Ibsen Secret*. Besides *Uncle William* her novels include: *Kate Weatherill* (1900); *A Pillar of Salt* (1901); *The Son of a Fiddler* (1902); *Simeon Tetlow's Shadow* (1909); *Happy Island* (1910); *Mr. Achilles* (1912); *Betty Harris* (1912); *The Taste of Apples* (1913); *The Women in the Alcove* (1914).

LEE, JESSE (1758-1816). An American Methodist Episcopal clergyman and pioneer, born in Prince George's Co., Va. A preacher after 1783, in 1789 he visited New England and established Methodism from the Connecticut River to the farthest settlement in Maine. He formed the first Methodist class in New England, at

Stratfield, Conn., Sept. 26, 1787, and the first in Boston, July 13, 1792, and for his pioneer work in New England was often called the Apostle of Methodism. He was a friend and assistant of Francis Asbury. He lacked only one vote of being elected Bishop by the General Conference of 1800. Lee was three times chosen chaplain of the national House of Representatives and once of the Senate. He wrote *A Short Account of the Life and Death of the Rev. John Lee* (1805) and a *History of Methodism in America* (1807), which has value for the early period. Consult: Minton Thrift, *Memoir of the Rev. Jesse Lee, with Extracts from his Journals* (New York, 1823); L. M. Lee, *Life and Times of Jesse Lee* (Richmond, Va., 1848); W. H. Meredith, *Jesse Lee, a Methodist Apostle* (New York, 1909).

LEE, JOHN DOYLE (1812-77). A Mormon official, born at Kaskaskia, Ill. In 1837 he came under Mormon influence and moved to Daviess Co., Mo., where he joined the Church. Afterward he returned to Illinois on mission work, and when Nauvoo became the centre of the activity of the sect, he acted as personal guard to Joseph Smith and afterward to Brigham Young. He was among the first to go to Salt Lake, and built the town of Parowan, besides locating numerous other settlements. At various times he was captain of the militia, president of Harmony, probate judge of Iron County, and member of the Territorial Legislature. He was accused of having incited the massacre of the Arkansas emigrants at Mountain Meadows (q.v.) in 1857. On his first trial before the United States Court in 1875 the jury disagreed, but on the second trial in 1876 he was found guilty. He was shot on the scene of the outrage, March 23, 1877. After his second trial he declared that he had acted under instructions from Brigham Young and other high Mormon officials. Consult *The Mormon Menace; being the Confession of John Doyle Lee, Danite, an Official Assertion of the Mormon Church under the Late Brigham Young*, with an introduction by Alfred Henry Lewis (New York, 1905).

LEE, LUTHER (1800-89). An American clergyman, born at Schoharie, N. Y. He entered the Methodist Episcopal ministry in 1827; espoused the antislavery cause (1838), incurring thereby the active opposition of the leaders of the denomination; withdrew from the Methodist church in 1843 on account of its attitude upon the slavery question; and was one of the organizers of the "Wesleyan Methodist Connection." He was president of the first Wesleyan Methodist General Conference in 1844; edited the *True Wesleyan*, the organ of the new denomination; became president of Michigan Union College at Leoni, Mich., in 1856; and in 1864 was made professor in Adrian College, Michigan. In 1867 he returned to the Methodist Episcopal church. Among his writings are: *Universalism Examined and Refuted* (1836); *Immortality of the Soul* (1849); *Slavery in the Light of the Bible* (1855); *Elements of Theology* (1856; 4th ed., 1865); *Wesleyan Manual: A Defence of the Organization of the Wesleyan Methodist Connection* (1862); *Natural Theology* (1866). Consult his *Autobiography* (New York, 1882).

LEE, NATHANIEL (c.1653-92). An English dramatic poet. He graduated at Trinity College, Cambridge, in 1668 and was then for a time an actor, but soon retired and devoted himself to

the writing of tragedies. He first attracted attention, in 1677, by his *Rival Queens*, in which occurred the well-known lines, "When Greeks join'd Greeks then was the tug of war." The work won high praise from Dryden, who was later associated with Lee in writing *The Duke of Guise* (1682). In 1684 Lee became insane, and for four years he was confined in an asylum. Upon his release he again devoted himself to literary work. Among the most popular of Lee's plays, most of which treated subjects from classical history, are *Mithridates* (1678), *Theodosius* (1680), and *Lucius Junius Brutus* (1681). Intemperance, which had driven him temporarily mad in 1684, killed him in 1692.

LEE, RICHARD HENRY (1732-94). A patriot of the American Revolution. He was born at Stratford, Westmoreland Co., Va., Jan. 20, 1732, the son of Thomas Lee, who was president of the Virginia Council and a member of the Ohio Company. After receiving some preliminary education at home the son was placed in school at Wakefield, England, where he remained until 1752, when he returned to Virginia and made his home with his elder brother. Taking an active interest in public affairs, Richard Henry Lee early became a justice of the peace for his native county and was elected to the House of Burgesses of Virginia at a time when his brother Thomas was a member of the Legislative Council. In this body he served from 1758 to 1775, taking a conspicuous stand in opposition to slavery. In 1766, when the Legislature was taking action with reference to the Declaratory Act of Parliament, he drafted the address to the King and also the memorial to the House of Lords. In 1773 he was appointed by the Legislature a member of the Virginia Committee of Correspondence and in the following year was sent to the First Continental Congress. As a member of that body, he drafted a number of important public papers, including the petition to the King, and as a member of the Second Continental Congress he prepared the address to the inhabitants of Great Britain. He contributed largely to the more difficult work of that body, being recognized throughout as one of the really influential leaders of the revolutionary movement, and finally becoming famous by his motion of June 7, 1776 (adopted July 2), that "these united Colonies are, and of right ought to be, free and independent States; that they are absolved from all allegiance to the British crown, and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved." With the decline of the prestige and power of Congress, Lee, as did other of the leading political workers, devoted more of his time to the affairs of his own State, serving in its Legislature in 1777 and from 1780 until 1784. He returned to Congress in the fall of 1784 and was then elected President of that body. In 1786 he was a member of the Virginia Legislature and in 1787 he was a member both of that body and of the national Congress. To the new Federal Constitution he was opposed, and after its adoption he was elected, by the Anti-Federalists, to the Senate, where he served until the condition of his health caused his resignation in 1792. At that time, however, he had become a supporter of Washington and of the new Constitution; but his resignation from the Senate was followed by his retirement from public life, and he died two years thereafter (June 19, 1794) at his

home, Chantilly, in his native county of Westmoreland. Lee possessed great powers as an orator. His grandson, R. H. Lee, published *Life and Correspondence of Richard Henry Lee* (2 vols., Philadelphia, 1825). His *Letters*, vols. i, ii (New York, 1910, 1914), have been edited by J. C. Ballagh.

LEE, ROBERT (1804-68). A Scottish clergyman. He was born at Tweedmouth, England, Nov. 11, 1804, educated at the University of St. Andrews, ordained a minister of the Scottish church in 1832, settled at Arbroath in 1833, and at Campsie in 1836. When the Church of Scotland was divided by the secession, he remained with the Established church, was called to the pastorate of the Old Grey Friars' Church in Edinburgh, and took a prominent part in the controversies that ensued. In 1846 he was appointed regius professor of biblical criticism in the University of Edinburgh and in 1854 published the great work of his life, *The Holy Bible, with about 60,000 Marginal References and Various Readings, revised and improved*. He was much interested in the enrichment of the Church service. In 1859 he was charged with introducing in public worship liturgical forms and postures unknown to the Church of Scotland; the fact being that he had published a volume of *Prayers for Public Worship* (1857) and used the same in his own church. He defended himself with such power and eloquence that his accusers were defeated. In 1864 he published *The Reform of the Church of Scotland in Worship, Government, and Doctrine*. He died at Torquay, England, March 14, 1868. Consult his *Life* by Story (Edinburgh, 1870).

LEE, ROBERT EDWARD (1807-70). A distinguished American soldier, commander in chief of the armies of the Confederate States of America. He was born at Stratford, Westmoreland Co., Va., Jan. 19, 1807. His father was "Light Horse Harry" Lee, a distinguished cavalry leader in the Revolutionary War; his mother, Anne Hall Carter. In 1811 his father removed to Alexandria, in Fairfax County. Very early in life he resolved on a military career, studied to that end at Alexandria Academy and under a Mr. Hallowell, entered West Point in 1825, on an appointment secured for him by Gen. Andrew Jackson, and by his diligence and ability graduated in 1829 second in his class. From this time until 1834 he was in the Engineer Corps with the rank of second lieutenant. In 1831 he married Mary Parke Custis, the great-granddaughter of Martha Washington. In 1834 he became assistant to the chief engineer of the army in Washington; three years later he superintended the construction of works to protect St. Louis from the erosion of the Mississippi, and in 1842 he took charge of the defenses in New York harbor, where he remained until the outbreak of the Mexican War, in 1846. In 1838 he had been made a captain.

In the Mexican War he was first with General Wool, for whom he did excellent scouting. Transferred at the personal request of General Scott to the army before Vera Cruz, he arranged the batteries so that the town was reduced in a week. After each of the battles of Cerro Gordo, Churubusco, and Chapultepec, he received promotion, earned by remarkable feats of physical and moral courage, and for his services in the last was brevetted colonel. He was engaged in engineering work in the city of Mexico, and at the close of the war General Scott pronounced

him "the greatest living soldier in America.*" For the next three years he was engaged in strengthening the defenses of Baltimore from an attack by sea. In 1852 Lee became superintendent at West Point and in his three years of service there improved the discipline greatly and lengthened the course of study to five years. On the formation of a new cavalry regiment in 1855, he was appointed lieutenant colonel and saw service in western Texas against the Indians. In July the command of the regiment devolved on him, but three months later he was called home by the death of his father-in-law, Mr. Custis. Returning to his command, he continued with it until the fall of 1859, when he obtained leave to visit his family. During this visit he commanded the troops which suppressed the John Brown raid. He was then called to Richmond to advise the Legislature with regard to defense, should an invasion again occur. Returning to Texas, he was in charge of his former department, until, on the secession of that State in 1861, he was recalled to Washington.

Lee was earnestly opposed to disunion, had given his own slaves their freedom, and regarded the institution of slavery as "a moral and a political evil in any country," but his future actions were clearly foreshadowed in a letter to his son: "Still, a union that can only be maintained by swords and bayonets, and in which strife and civil war are to take the place of brotherly love and kindness, has no charm for me. I shall mourn for my country and for the welfare and progress of mankind. If the Union is dissolved and the government disrupted, I shall return to my native State and share the miseries of my people and, save in defense, will draw my sword on none." While deploring the actions of his people, he believed that they had been wronged, and his sympathy drew him to them. In the last analysis, too, he was a States-rights man; for he "would defend any State if her rights were invaded." He reached home on March 1, 1861, and on April 18 Frank P. Blair, on behalf of President Lincoln, visited him and offered him the command of the Army of the United States. Lee wrote later, "I declined the offer he made me to take command of the army that was to be brought into the field, stating, as candidly and courteously as I could, that, though opposed to secession and deprecating war, I could take no part in an invasion of the Southern States." On April 19 President Lincoln declared a blockade of the Southern ports; troops began to pour into Washington; the invasion of his State had, in Lee's opinion, begun, and on April 20 he resigned, three days later taking command in Richmond of the military forces of Virginia with the rank of major general. On May 25 he became a brigadier in the service of the South, no higher rank having then been created by the Confederate government.

Lee found Virginia totally unprepared for the conflict, but acting as the commander in chief of the State troops and working steadily with General Gorgas, the chief of ordnance, he had by the end of May 30,000 men equipped and in the field and many regiments well advanced in organization. On June 8 President Davis took charge of all military movements, and General Lee, though anxious to take the field, remained at his side as an adviser.

His first operations in the field were in West Virginia during the summer and autumn of

1861 and were on the whole unsuccessful. The disadvantages he had to contend with were great, his subordinates were at loggerheads, and the enemy under General McClellan was strong and alert. Assigned to the Department of South Carolina, Georgia, and Florida, he devoted himself to the task of creating coast defenses and interior works to protect the country on which the Confederacy was absolutely dependent for supplies. His grasp of the situation was masterly, and his personal presence did much to stimulate the rapidity with which the defense was made efficient. In March, 1862, he was recalled to Richmond to direct the military operations of the Confederacy, under the supervision of President Davis, and it speaks well for the serenity of Lee's character that this somewhat trying situation produced so little friction. Men and supplies had to be prepared to meet McClellan's advance up the Peninsula, where some victory was expected from the victors of the first Bull Run to compensate for the disasters of Forts Henry and Donelson and of Roanoke Island. Lee kept in full communication with Jackson's movements in the valley of Virginia, giving him free hand. When Gen. Joseph E. Johnston, who had command in the Peninsula against McClellan, wished to draw strongly on the defensive forces of the interior and to risk all on one battle, Lee, believing that a smaller army could be successful, opposed him and was supported in this opinion by President Davis. Johnston steadily retreated before McClellan until Jackson's famous dash prevented McDowell, with his force of about 40,000, from joining the main Federal army; then he turned and fought the indecisive battle of Seven Pines (May 31, 1862). Lee took no part in this fighting, but on June 1 he took command, for Johnston had been wounded, and the next in rank, Gen. G. W. Smith, was in bad health. Setting about vigorously to secure reinforcements and sending Stuart on his brilliant circuit of the Federal army, the new commander resisted the general desire for him to fall back on Richmond and took the offensive. Some tremendous fighting at the battle of Gaines's Mill forced McClellan to retreat towards his gunboats on the James. The fierce fight of Malvern Hill, where the Confederates were unable to dislodge the Federals, allowed McClellan to reach his place of safety. The Federals had been driven back but not routed in these terrible seven days' battles around Richmond, June 25-July 1, and Lee was not satisfied with what he had done. It is possible that if he had had the right support from his subordinates he would have carried out his original plan of destroying the opposing army. General Pope soon after this took command of the Federal armies in Virginia west of Washington, while General McClellan retained position on the James River. Lee, assuming that Richmond was no longer in serious danger from McClellan's forces, planned to throw his whole available strength against Pope. A series of rapid and unexpected blows fell upon the outer armies under Pope's command, his store of provisions was captured, and on August 29 and 30, 1862, Pope's main army was signally defeated by Jackson and Lee on the same field that had witnessed the first battle of Bull Run. Lee then projected the invasion of Maryland, as well for political as for military reasons. On September 7 his entire army was near Frederick City. The invasion was a tentative one and was

attended with many disheartening circumstances. Thousands of stragglers left the ranks between Manassas and the Potomac, the greater part weakened by want of rest, food, and shoes, and worn out by continued marches and daily battles, while many yielded to other motives. General McClellan had meanwhile been sent against Lee. On Sept. 15, 1862, Harper's Ferry was captured by the Confederates under Jackson preparatory to the invasion of Pennsylvania. McClellan followed Lee's movements, keeping the body of his army between Lee and Washington. By good fortune, coming into possession of Lee's order of march, he forced the latter to turn. The battle of Antietam (q.v.), September 16-17, was the result, the advantage being with the Federals. With a greatly superior force McClellan succeeded in compelling Lee to abandon his plan of invading Pennsylvania, but the latter's superior generalship displayed throughout the whole engagement and the subsequent movements prevented the former from obtaining any further advantages as Lee retreated southward. Lee and his army had fought with splendid skill and bravery, but the campaign as a political move was a failure. The Federal government now decided to renew the attempt on Richmond, this time via Fredericksburg. On November 7 Burnside received the command of the Army of the Potomac. Both armies were rapidly drawn southward, and on November 20 Lee was gathering his entire army behind the works of Fredericksburg, while Burnside's covered the hills on the north facing them. On December 13 a determined assault was directed by Burnside squarely against the fortified hills of Fredericksburg. It was repelled with terrible loss to the Federal army. (See **FREDERICKSBURG**.) After this battle the army of General Lee was not again molested until the campaign of 1863 opened. Gen. Joseph Hooker had been appointed to supersede General Burnside and with a powerful army, about double that of Lee, now declared his intention of forcing the Confederate army from Fredericksburg. At the end of April he led the bulk of his army across the Rappahannock and took up a position near Chancellorsville. The genius of Lee was never more conspicuous than in the battle which followed (May 2-4), resulting in the complete defeat of Hooker. (See **CHANCELLORSVILLE, BATTLE OF**.) But while the battle of Chancellorsville had been brilliantly won, Lee had lost his greatest support, "Stonewall" Jackson. After some indecisive fighting the Federal army on the night of May 5 withdrew across the Rappahannock.

Lee now organized his army for the invasion of Pennsylvania, and on June 3 commenced the advance with 80,000 men. The entire Confederate army was transferred to North Virginia, and on June 27 it was concentrated near Chambersburg, Pa. Gen. George G. Meade succeeded Hooker in the command of the Federal army, which was now concentrated towards Gettysburg. General Stuart, on whom Lee depended for his information as to Federal movements, had unskillfully got on the other side of Meade and could render no service. On July 1 the battle of Gettysburg began by an unexpected collision between the Federal cavalry and the head of General Hill's column moving from Chambersburg towards Gettysburg. It resulted in the repulse of the Federal advance and its retirement to the strong position of Cemetery

ROBERT E. LEE

Ridge, south of Gettysburg. On July 2, at 4 P.M., after a tremendous cannonade, the Confederates delivered an impetuous attack on the right side of Meade's position. It met with only partial success. On the afternoon of the 3d Lee ordered a cannonade which lasted for two hours and under cover of which his attacking columns of 15,000 men formed. The attack was all that human bravery could make it; but the columns melted before the fire that waited for them, and though their van reached and covered the key of the struggle, their main force was annihilated, and the position quickly retaken. General Lee's equanimity was conspicuous in this defeat in the manner of his meeting the disorganized remnant of that returning column, infusing them with his own serene confidence and taking upon himself the responsibility for the fatal charge. Meade's army was seemingly too much shattered for him to venture the offensive the next day, although Lee stood ready for him. The Confederate general, now short of ammunition and fearing for his communications, began to retreat. (See GETTYSBURG, BATTLE OF.) Meade followed to the Potomac, but did not attack, and Lee got his army across with masterly skill. The Federal commander crossed into Virginia shortly afterward, but no events of importance took place in that State during the remainder of the year. Lee, feeling that a crisis was at hand, suggested that he be relieved by a younger man; but President Davis promptly answered that such a step was impossible. The autumn of 1863 saw only maneuvering on the part of Lee and Meade; but the latter was forced to withdraw just when he was intending to attack, and Lee went into winter quarters behind the Rapidan.

After this winter of 1863-64, in which the privations that the Confederates suffered were well compared with those of the camp at Valley Forge, the final campaign opened with General Grant in command of the Federal forces. He recognized that the way to defeat Lee was to "hammer" him out. Lee had only about 60,000 against Grant's 120,000, but he was fighting on the defensive in a very difficult country. From May 5 to June 12 there was terrible and almost continuous fighting in the "Wilderness" (q.v.), and along the line of Grant's movement to the James River, Lee using his veterans with consummate skill, and Grant his constantly filled ranks with a persistence that was peculiarly his own. In this short time the Federals lost 60,000 men and the Confederates 14,000, and in the siege of Petersburg from June, 1864, to the beginning of April, 1865, the fighting was almost as terrible, save for the fact that now the Federals were defended by their works and the Confederates were almost without food. On Feb. 6, 1865, Lee was made commander in chief of all the armies of the Confederacy. On April 2 his position with the main army became untenable, and he resolved to try to lead the 30,000 men left to him southward. He abandoned Richmond and Petersburg, which were occupied by the Federals on April 3; and Lee, pressing on to Amelia Court House, found that by some mistake his provisions had been sent on to the capital, and that he could neither fight nor retreat with any prospect of success. On April 9, 1865, he surrendered to General Grant at Appomattox Court House. The devotion of Lee's soldiers to their leader was never more strikingly shown than at the surrender.

Lee remained in Richmond until June, 1865, when he retired to a quiet country place. In October of the same year he was installed as president of Washington College at Lexington, Va., now Washington and Lee University. The five years of his service were marked by steady recuperation from the utter desolation of the war. New chairs were founded, the scheme of study was enlarged, and from the moral side it would have been impossible to secure finer results. In 1870 his health began to fail, and a visit to the farther South was tried with only temporary results. He died on the 12th of October. Lee ranks as the greatest of the Southern commanders, his humane conduct throughout the war and the magnanimous way in which he stood defeat and urged the Southern people loyally to accept the result having contributed greatly to his fame. Lee's homestead at Arlington, Va., was seized by Federal forces soon after the outbreak of the Civil War and was purchased by the national government at a tax sale in January, 1864, for \$26,800. Later in the same year the Arlington National Cemetery was established here. In 1868 George W. C. Lee, an heir under the Custis will, brought suit contesting the legality of the government's title under the tax sale, with the result that, although the suit was barred in the Supreme Court, Congress in March, 1883, appropriated \$150,000 with which, through a deed from the heir, to acquire an undisputed title.

Hosmer, *The Appeal to Arms* (New York, 1907); id., *Outcome of the Civil War* (ib., 1907); T. N. Page, *Robert E. Lee, the Southerner* (ib., 1908); id., *Robert E. Lee, Man and Soldier* (ib., 1911); Gamaliel Bradford, *Lee the American* (Boston, 1912); J. J. Bowen, *The Strategy of Robert E. Lee* (New York, 1914).

LEE, SAMUEL (1783-1852). An English Orientalist. He was born at Longnor in Shropshire and graduated at Queens' College, Cambridge, in 1818. In 1819 he was chosen professor of Arabic at Cambridge; he was regius professor of Hebrew from 1831 to 1848 and at the time of his death was rector of Barley, Hertfordshire. His edition of the Syriac Bible, *Novum Testamentum Syriace* (1816) and *Vetus Testamentum Syriace* (1823), his *Grammar of the Hebrew Language* (1830), his *Book of Job, Translated from the Original Hebrew* (1837), his *Hebrew, Chaldaic, and English Lexicon* (1840), and several other works won for him a high reputation.

LEE, SAMUEL PHILIPS (1812-97). An American naval officer, born in Fairfax Co., Va. He entered the United States navy as a midship-

man in 1825. In 1862, as commander of the *Oneida*, he participated in the capture of New Orleans by Farragut and in other operations on the Mississippi. In July of the same year he was commissioned captain and was put in command of the North Atlantic blockading squadron. In May, 1864, he was in command of the vessels on the James and in the following summer was transferred to the command of the Mississippi squadron. He was commissioned commodore in 1866 and rear admiral in 1870, when he was put in command of the North Atlantic fleet. He retired in 1875.

LEE, SIR SIDNEY (1859-). An English scholar, born in London, Dec. 5, 1859. He was educated at the City of London School and at Balliol College, Oxford. In 1883 he became assistant editor of the *Dictionary of National Biography*; in 1890-91 he was joint editor and in the latter year, on the retirement of Sir Leslie Stephen (q.v.), he was appointed editor in chief. Under his supervision appeared the last 37 volumes, together with a *Supplement* (3 vols., 1901) and a *Second Supplement* (3 vols., 1912). To this great work he contributed some 800 articles, or about three volumes. He lectured at Oxford and Cambridge, in 1903 was Lowell Institute lecturer at Boston, Mass., and in 1913 was appointed professor of English language and literature in the University of London. After 1903 he was chairman of the executive of the Shakespeare's Birthplace Trust. In 1911 he was knighted. He is most favorably known for *Stratford-on-Avon from the Earliest Times to the Death of Shakespeare* (1885; new ed., 1906); a particularly important *Life of Shakespeare* (1898; abridged for students, 1900); *A Life of Queen Victoria* (1902; new ed., 1904); *Facsimile Reprint of Shakespeare's First Folio* (1902); *Shakespeare First Folio Facsimile, with Introduction and Census of Extant Copies* (1902); *Elizabethan Sonnets* (1904); *Great Englishmen of the Sixteenth Century* (1904); *Shakespeare's Poems and Pericles* (1905); *Shakespeare and the Modern Stage* (1906); *The French Renaissance in England* (1910). He also edited Lord Berners' translation of *Huon of Bordeaux* (1883-85) and the *Autobiography* of Lord Herbert of Cherbury, with a continuation of his life (1886; new ed., 1906). The memoir of Edward VII, which was not highly eulogistic, and which appeared in 1912 in the *Dictionary of National Biography*, was the storm centre of a heated controversy.

LEE, SOPHIA (1750-1824). An English novelist and dramatist, born in London. She was the daughter of John Lee, the actor, who was well known as a theatrical manager and a player of Shakespearean rôles. Her first success, a five-act comedy, entitled *The Chapter of Accidents*, was played and published in 1780. The profits of the venture enabled her to establish a girls' school in Bath, which was speedily successful through her abilities as a teacher and the charm of her companionship, and which she continued to conduct until 1803. In 1785 she published *The Recess, or a Tale of Other Times*, which is among the first specimens of historical fiction in English, and in 1796 her tragedy *Almeyda, Queen of Grenada*, was played with Mrs. Siddons and Charles Kemble in the cast, but proved a failure. Her best-known work was done in collaboration with her sister Harriet Lee (q.v.), to whose *Canterbury Tales* she contributed two stories entitled *The Young*

Lady's Tale and *The Clergyman's Tale*. Her other works include: *The Hermit's Tale* (1787); *The Life of a Lover* (1804); *The Assignment* (1807).

LEE, STEPHEN DILL (1833-1908). An American Confederate soldier. He was born at Charleston, S. C., and graduated from the United States Military Academy in 1854. He then served in the Fourth Artillery, but resigned in 1861, and became a captain in the Confederate army. He distinguished himself at the siege of Vicksburg, was made a prisoner, was exchanged, and then was promoted to major general. At the close of the war he had risen to the rank of lieutenant general. Afterward he was a planter in Mississippi and a State Senator in 1870; was president of the Mississippi Agricultural and Mechanical College in 1880-99; and served as superintendent of the Vicksburg National Military Park after 1899 and as president of the United Confederate Veteran Association after 1904.

LEE, THOMAS GEORGE (1860-). An American anatomist, born at Jacksonville, N. Y. He graduated B.S. and M.D. from the University of Pennsylvania in 1886 and studied also at Würzburg (1887), Harvard (1892), and Munich (1892). At Yale he lectured on histology and embryology (1886-91); at Radcliffe College, Harvard, was assistant in histology (1891-92); and at the University of Minnesota was professor of histology and embryology and director of the laboratory (1892-1909), professor of anatomy and director of the Institute of Anatomy (1909-13), and thereafter professor of comparative anatomy. He became associate editor of the *Anatomical Record* and is author of monographs on the embryology of vertebrates.

LEE, VERNON. The nom de plume of the English writer Violet Paget.

LEE, WILLIAM (?-c.1610). An English stocking weaver, born probably in Calverton, Nottinghamshire. He was educated at Oxford, took orders, and afterward had a living at Calverton. In this town he invented his stocking frame and started a small manufactory. There was some interest taken in the invention by Queen Elizabeth and James I, but they were too conservative to consider it seriously, and Lee, having received much encouragement from Henry IV, went to France and set up his frames at Rouen. Here he worked with great success. After his death, which occurred soon after the assassination of Henry IV, Lee's workmen returned to England and brought the valuable invention back with them.

LEE, WILLIAM (1737-95). One of the representatives of the United States in Europe during the American Revolution; the fifth son of Thomas Lee and the brother of Richard Henry Lee, Francis Lightfoot Lee, and Arthur Lee. He was born at Stratford, Va., but some time before the Revolutionary War took up his residence as a merchant in London, where he acted as the agent of the Colony of Virginia for a time and in 1773 was elected sheriff of Middlesex. He was an ardent partisan of Wilkes and in 1775 was elected on the Wilkes ticket alderman of London, which position he held nominally until January, 1780. In June, 1777, he joined Thomas Morris in superintending the mercantile affairs of the United States at Nantes and for a time had virtually entire charge of the commercial interests of the United States in France. On May 9, 1778, he was appointed by Congress

a commissioner to the courts of Vienna and Berlin, but remained in Paris for nearly a year after receiving his commission, and subsequently lived at Frankfort, Germany, but accomplished nothing. In September, 1778, he drew up, with Jan Neufville, an Amsterdam merchant, a commercial treaty which was indorsed by the burgo-master of Amsterdam, and which later served as a pretext for England's declaration of war against Holland in 1780. In June, 1779, Lee was recalled from his missions, both of which had been unsuccessful. He died at Green Spring, Va., having returned to his native State about 1784. Lee's diplomatic correspondence, together with a brief biographical sketch, may be found in Wharton (ed.), *The Revolutionary Diplomatic Correspondence of the United States* (Washington, 1889). *The Letters of William Lee* (Brooklyn, 1891) have been edited by W. C. Ford.

LEE, WILLIAM LITTLE (1821-57). An American lawyer. He was born at Sandy Hill, N. Y., studied at Norwich University, Vt., and, after being superintendent of a military academy at Portsmouth, Va., also at the Harvard Law School. His practice in Troy, N. Y., was interrupted by threatening consumption, and in 1846 he started for Oregon by sea, but was delayed at Honolulu; undertook several suits for the government and was made Hawaiian Chief Justice and Chancellor. He drew up a new constitution and civil and criminal codes, and was appointed president of the commission which was to have charge of the land given up to the common people by the King and chiefs—a measure proposed by him. In 1855 he went to the United States and negotiated a reciprocity treaty between that country and Hawaii.

LEECH (AS. *læce*, leech, physician, Goth. *lēkes*, OHG. *lāhhī*, *lāchi*, physician, from AS. *læc*, medicine, gift). An annelid of the order or class Hirudinea, divided into a number of groups, Hirudinidae, etc., some of which contain many species. They are mostly inhabitants of fresh waters, although some live in grass, etc., in moist places, and some are marine. They are most common in warm climates. The body is soft and composed of segments (e.g., *Pontobdella*) like that of the earthworm, but not furnished with bristles, except in one genus, to aid in progression as in the earthworm; instead of which a sucking disk at each extremity enables the leech to avail itself of its power of elongating and shortening its body, by means of which it moves with considerable rapidity. The external rings (annuli) which show in the body wall do not correspond to the inner segments, but are much more numerous. While there are usually 33 segments, the number of rings may be more than 200. There are, at the middle of the body, 3, 5, 6, or 12 rings to each segment. The mouth is in the anterior sucking disk. The mouth of many of the species is admirably adapted not only for killing and eating the minute aquatic animals which constitute their ordinary food, but for making little wounds in the higher animals, through which blood may be sucked. The mouth of the medicinal leech has three small, white, hard pharyngeal teeth, minutely serrated along the edges, and curved so as to form little semicircular saws, provided with muscles powerful enough to work them with great effect and to produce a triradiate wound, i.e., three short, deep gashes, radiating from a common centre, whence some of the rather fanciful names, such

as dragon leech. The stomach is very large and is divided into compartments, some of which have large lateral cæca; and a leech which has once gorged itself with blood retains a store for a very long time, little changed, in these receptacles, while the digestive process goes slowly on. The circulatory system consists of four great pulsating trunks—one dorsal, one ventral, and two lateral—with their branches; there is no heart. The blood system is in such close and intimate relation with the body cavity that it is difficult to determine accurately the limits of each. The aëration of the blood takes place in the skin, or rarely by special outgrowths of the body walls, which function as gills. Leeches are oviparous, and each individual is hermaphroditic, while in certain allied forms (*Histiobdella*, etc.) the sexes are distinct. The eggs are laid in sacs, or, as in *Olepsine*, the fish leech, are covered with a transparent fluid substance which hardens and envelops the eggs. Development is usually direct, and there is no metamorphosis, the young being like the adult. When feeding, the leeches pair and one impregnates the other by passing spermatophores through the penis into the vagina. Simultaneous mutual fertilization has also been described. They have small eyes (in the medicinal leech 10), which appear as black spots on the dorsal side of the segments back of the mouth. These eyes are very simple and seem to be merely modified sense papillæ, of which there are many arranged in longitudinal rows, the whole length of the body. Leeches vary much in size and color. Some species are less than half an inch long, while *Macrobdella valdriana* is said to reach a length of 2½ feet. Some are very slender, while others are broad and very flat. The colors are usually dull gray, brown, dark green, and black.

Leeches frequently change their skin; and one cause of the great mortality so often experienced among leeches kept for medicinal use is the want of aquatic plants in the vessels containing them, among which to rub themselves for aid in this process, and for getting quit of the slime which their skins exude. Leech aquaria in which aquatic plants grow are therefore much more favorable for the health of leeches than the tanks and vessels formerly in use. The medicinal leech (*Hirudo medicinalis*) is a European species, a rare native of Great Britain; leeches, however, are generally imported from Hamburg and from the south of Europe. The ancients were well acquainted with leeches, but their medicinal use seems to have originated in the Middle Ages. The horseleech (*Hæmopsis sanguisorba*) is common in Great Britain, it is much larger than the medicinal species, but its teeth are comparatively blunt, and it is little of a bloodsucker, and useless for medicinal purposes. In many parts of India, as in the warm valleys of the Himalaya, the moist grass swarms with leeches, some of them very small, but very troublesome to cattle and men who have occasion to walk through the grass. The moist valleys of Java, Sumatra, Chile, and other tropical countries swarm with land leeches. Many species of leech are found in the United States, the most common ones belonging to the genera *Nophelis* and *Glossiphonia* (better known as *Clepsine*). Consult: A. E. Verrill, *Invertebrate Animals of Vineyard Sound* (Washington, 1874); J. P. Moore, "The Leeches of the United States National Museum," in *Proceedings of the United States National Museum*, vol. xxi (Washington, 1899); W. E. Castle,

"Some Fresh-Water Rhynchobdellidæ and their Parasites," in *Museum of Comparative Zoölogy, Bulletin*, vol. xxxvi (Cambridge, Mass., 1900), containing a bibliography; F. E. Beddard, "Earthworms and Leeches," in *Cambridge Natural History*, vol. ii (Cambridge, Eng., 1901); F. E. Beddard, *Earthworms and their Allies* (New York, 1912).

LEECH, JOHN (1817-64). An English caricaturist. He was born in London, Aug. 29, 1817, and was educated at the Charterhouse, where he formed his lifelong friendship with Thackeray. At the wish of his father he studied medicine at St. Bartholomew's, where he was most distinguished for his anatomical drawings, a talent which he turned to account on the collapse of his father's fortune. In art he was practically self-taught. His first work, "Etchings and Sketches by A. Pen, Esq." (1835), was a series of street characters, drawn on stone. After this appeared his sketches in Bell's *Life in London*. After designing for various magazines and executing several series of plates in collaboration with Percival Leigh, including an important lithographic series entitled "The Children of the Nobility," he became associated with *Punch* (1841). His satirical and political sketches for *Punch*, upon which his fame chiefly rests, were separately published under the title "Pictures of Life and Character" (1854-69). Among the works which he illustrated were Dickens's *Christmas Stories* (1843-48), Gilbert A'Beckett's *Comic History of England* (1847-48), and its companion piece, *Comic History of Rome* (1852), and R. C. Surtree's sporting novels. In 1858 he made a tour through Ireland, the outcome of which was a book, *Little Tour in Ireland*, written by his traveling companion, Dr. Hole, which he illustrated. He also designed illustrations for the *Illustrated London News*, *Punch's Pocket Book*, and *Once a Week*. He died at Kensington (London), Oct. 29, 1864.

Leech represents the transition from Cruikshank to Du Maurier, when humorous art was progressing from the coarse and boisterous satire of earlier times to the more refined forms of the present day. The work of Leech was less versatile and dexterous but more refined than that of Cruikshank, although he had as keen an eye for the ridiculous, and his caricatures were truer to life. Consult Chesneau, "Un humoriste anglais," in the *Gazette des Beaux-Arts* (1875); Brown, *John Leech* (London, 1882); W. P. Frith, *John Leech and his Work* (2 vols., ib., 1891); *Catalogue of an Exhibition of Works by John Leech, 1817-1864, Held at the Grolier Club* (New York, 1914).

LEECHBURG. A borough in Armstrong Co., Pa., 35 miles northeast of Pittsburgh, on the Pennsylvania Railroad (Map: Pennsylvania, B 6). There are extensive steel sheet works, foundries, cement plants, and productive coal mines. Pop., 1900, 2459; 1910, 3624.

LEECHÉE. See LITCHI.

LEECHING (AS. *læce*, leech, physician, Goth. *lēkeis*, OHG. *lähhi*, *lāchi*, physician, from AS. *læc*, medicine; the worm is so called from its medicinal use). The application of leeches for the purpose of abstracting blood. This method of bloodletting is employed in medicine in place of cupping or venesection in the case of local inflammation or acute congestion. Having attached itself to the integument by means of teeth and suction apparatus, the leech secretes a liquid which prevents the blood from coagu-

lating; and hence the persistent bleeding in some cases after a leech is removed. A leech is most easily applied by inserting its tail end first in a small, narrow bottle, and then inverting the bottle against the skin and letting the leech slide down. If it refuses to bite, a few drops of sweetened milk or of blood put on the skin will overcome its reluctance and incite it to attach itself. The leech may be detached by sprinkling salt on it. At each application a leech ordinarily takes about one drachm of blood. It may be made to disgorge by treating it with salt or by stripping it gently from tail to head. Leech bites leave deep and permanent though small scars. Leeches are employed in cases of meningitis, in conjunctivitis, in purulent inflammation of the external ear, and in the treatment of swollen joints, such as occur after a traumatism. They are especially useful in deep inflammations of the eye and ear, parts not easily accessible to the knife. The troublesome bleeding which follows in some cases is treated with styptics or with pressure of a gauze compress over the wound. Leeches should not be applied where the skin is delicate or loose, e.g., such as that over the eyelids or scrotum.

The use of leeches is not cleanly nor aseptic, and occasionally infection follows. Hence many prefer to employ the "artificial leech," which consists of a tube provided with a piston for exhausting the air within it. A scarificator having first been used, the margin of the end of the tube is anointed and placed firmly against the skin, and the air exhausted. Blood passes out into the tube. An excellent form of artificial leech is that devised by Dench, of New York.

LEECH LAKE. A lake in Cass Co., north central Minnesota (Map: Minnesota, C 3). It is nearly 25 miles long, about 15 miles broad, has an area of 184 square miles, and lies at an elevation of 1333 feet. The United States government has built a dam at its outlet, which drains into the Mississippi. It is one of a group of four considerable lakes (Pine, Sandy, and Pokegama being the other three) which form an important reservoir system for the headwaters of that river. The surrounding country is well timbered and constitutes the Leech Lake Indian Reservation.

LEEDS. A city and a county borough in the West Riding of Yorkshire, England, 22 miles west-southwest of York and 185 miles north-northwest of London (Map: England, E 3). It is situated in the valley of the river Aire nearly in the centre of the riding. Leeds is the largest city in Yorkshire, after Sheffield, and the sixth in England. It lies in an important coal and iron district; to the east and north the country is agricultural, to the west and south industrial. The river Aire, which has been open for navigation since 1659, flows into the Humber and affords communication with the sea on the east; to the west water communication is afforded by the Leeds and Liverpool Canal (127 miles long), finished in 1816. The railway facilities are exceptionally fine. The city is irregularly laid out. The numerous handsome public buildings are principally on the north side of the Aire. The notable buildings include the church of St. Peter's, a noble edifice, rebuilt in 1840; and St. John's, New Briggate, consecrated by Archbishop Neale in 1634, an almost unique example of a "Laudian" church still retaining the original fittings. The fine town hall (1853-58) is in Grecian style, 250 feet long and 200 broad,

with a tower 225 feet high. Its great hall, 161 feet long, 72 feet wide, and 75 feet high, is richly decorated and contains one of the largest and most powerful organs in Europe. There is a colossal statue of Queen Victoria in the vestibule, and one of Wellington in the front of the building. The Royal Exchange is in the Perpendicular style. Kirkstall Abbey, about 3 miles from Leeds, was founded between 1147 and 1153 by Henry de Lacie for the Cistercian Order of monks. It is a fine old ruin, remarkable for its simple grandeur and unity of design. It was bought by Colonel North and presented to the borough in 1888. Adel Church, about 4 miles from Leeds, is an interesting building, erected in 1140. Near it was a Roman station where antiquities have been found. There are many charitable institutions, among which are the Harrison almshouses, the fever and smallpox hospitals of the municipality, an excellent infirmary, etc. Leeds University has several fine buildings, with well-equipped departments of chemistry, engineering, biology, arts, and technical training, as well as a medical department, located near the Leeds Infirmary. (See LEEDS, UNIVERSITY OF.) The public recreation grounds, owned by the corporation, are Woodhouse Moor (the principal one), Hunslet Moor, Ivy House Estate, East End Park, and Armley Park. Roundhay Park, one of the most beautiful demesnes in England, at a distance of about 2 miles from Leeds, was bought by the corporation of the town in 1872 for \$140,000 and converted into a recreation ground for the use of the public. The city is divided into 16 wards and is governed by a mayor, 16 aldermen, and 48 councillors. The municipality owns fish, cattle, fruit, and corn markets, gas and water works, an electric-lighting plant, tramways, baths, free libraries, and cemeteries; subsidizes institutions for technical education; and maintains a fire brigade, an effective police force, and bands of music for the summer season. It provides garden lots for artisans and other people of small means, and has modern sewage works for converting the refuse into fertilizers.

For centuries Leeds has been the great centre of British woolen manufacture. Among the staple manufactures are fine broadcloths, army clothing, and fancy cloths sent from neighboring towns to be finished in Leeds. There are also manufactures of felt carpeting and drugget. Leeds has an enormous leather trade, and the manufacture of boots and shoes is a very important industry. The iron industry includes the smelting of ore, founding, and the manufacture of machinery, engines, agricultural implements, etc. There are extensive manufactures of fine decorative earthenware, leather, ready-made clothing, chemicals, silks, glass, railway cars, tobacco, paper, fire brick, etc.

Probably named after a British chief, Lede or Leod, in Saxon times Leeds was an important centre and is mentioned by Bede. Its charters, the first dating from 1208, were granted in the reigns of kings John, Charles I, Charles II, and James II. It was made a city in 1893 and sends five members to Parliament. At her jubilee in 1897 Queen Victoria created the chief magistrate Lord Mayor. Pop., 1801, 53,200; 1891, 367,505; 1901, 428,968; 1911, 445,568. The area of the city at the 1911 census was 21,593 acres. Consult: R. Thoresby, *Ducatus Leodiensis* (Leeds, 1816); Whitaker, *Loidis and Elmete* (ib., 1816); Jackson, *Guide to Leeds* (ib., 1889); Kidson,

Historical Notices of the Leeds Potteries (ib., 1892); Arthur Tait, *Some of the Public Institutions of Leeds* (ib., 1903); and Publications of the Thoresby Society.

LEEDS, DUKE OF. See DANBY, THOMAS OSBORNE, EARL OF.

LEEDS, UNIVERSITY OF. Founded in 1874, it constituted a part of Victoria University (Manchester) from 1887 to 1904, under the title of Yorkshire College. In 1904 it was reorganized as an independent university. It consists of four faculties—arts, science, technology, and medicine—and confers degrees also in law. The university practically stands alone in England in the provision of agricultural courses and in sending lecturers and dairying instructors to local centres. The institution, in addition to the usual sources of revenue, receives grants from the city and county councils in the ridings of Yorkshire and an annual subsidy from the Clothworkers' Company, London, which has equipped buildings for courses in dyeing, textiles, and tinctorial chemistry, and the Skinners' Company for similar work in the leather industries. The enrollment in 1912-13 was 1320. In 1911 Prof. Michael E. Sadler (q.v.) was appointed vice chancellor of the university. See MANCHESTER, UNIVERSITY OF.

LEEDS MUSICAL FESTIVAL. One of the important musical festivals of England, held every three years. Their chief object is the production of choral and orchestral novelties, principally by native composers, though foreigners are by no means excluded. The first of these festivals was held in 1858 in celebration of the opening of the town hall by Queen Victoria. The great artistic and financial success of the undertaking led to a movement for the establishment of a triennial festival, but it was not until 1877 that the plan was actually carried out. Since then the concerts have taken place regularly. From 1880 to 1898 Sir Arthur Sullivan was the conductor, and many important works were brought out. Since 1901 Sir C. Villiers Stanford has been the conductor.

LEE-HAMILTON, EUGENE (1845-1907). An English poet, born in London. He was educated in France, Germany, and at Oxford, entered diplomatic service, took part in the Alabama arbitration at Geneva, and was Secretary of the Legation at Lisbon. His health failing, he retired to Italy, where he lived with his half sister, Violet Paget (q.v.). Among his volumes are: *Poems and Transcripts* (1878); *Imaginary Sonnets* (1888); *The Fountain of Youth: A Fantastic Tragedy in Five Acts* (1891); *Sonnets of the Wingless Hours* (1894); *Forest Notes* (1899); a translation of Dante's *Inferno* (1898); *The Lord of the Dark Red Star* (1903).

LEEK. A manufacturing and market town in Staffordshire, England, 24 miles northeast of Stafford (Map: England, D 3). The parish church dates from 1180, but has suffered from its restorers. The churchyard, at the summer solstice, affords a view of a curious phenomenon, the sun appearing to set twice on the same day behind Cloud Hill to the west of the town. The town contains numerous educational and benevolent institutions. It has manufactures of silk goods, especially silk thread, and agricultural implements. It owns the gas and water works, markets, cemetery, and public baths and maintains an isolation hospital, public library, and technical school. The town charter was granted

by King John in 1208. Pop., 1901, 14,406; 1911, 15,487.

LEEK (AS. *leac*, OHG. *louh*, Ger. *Lauch*; possibly connected with OIr. *luas*, plant), *Allium porrum*. A biennial plant of the family Liliaceae, a native of the south of Europe. It is closely related to the onion, but instead of a bulb has a slight thickening at the base of the stem which may reach a height of 3 feet. The leaves are about an inch wide and a foot or more long, the flowers are in a large and dense terminal globular umbel, which is not bulbiferous. The leek has been long in cultivation, and some of the varieties exhibit the effects of cultivation in greatly increased size and delicacy. The lower part of the stem, before it has run up into a flower stalk, blanched by earthing up or other means which also induce it to swell and extend, is much esteemed in Europe for culinary purposes, but in America has not become widely popular. Its flavor is much milder than that of the onion. It is generally sown in spring and is used during the following winter. It flourishes in a rich but light and dry soil. Gardeners often transplant seedling leeks instead of merely thinning out the original rows. In general the culture of leeks is similar to that of the onion. See HOUSELEEK and Plate of ONIONS, OYSTER PLANT, ETC.

LEEMPOELS, lām'pools, JEF (1867-). A Belgian figure and portrait painter. He was born in Brussels and studied at the academy there under Portaels and Stallaert. His strikingly original work, although bold in technique, is minutely finished, with luminous color effects. All his pictures have an idealistic meaning, sometimes expressed by portraits of commonplace people, as in his "Friendship"; sometimes veiled in mysterious symbolism, as in "Destiny and Humanity." The latter painting, a reflection on the littleness of man, excited much controversy and earned for Leempoels the title of "a painter of hands." It was exhibited at Paris, Berlin, Antwerp, Vienna, Munich, and at St. Louis (1904), where it was awarded a gold medal. Among his other paintings are: "Angel or Demon"; "A Cruel Vision"; "Les Eplorés" (Those who Weep); "At Church"; "Dominique"; the decorative diptych, "Each in his Wisdom would Raise Aloft his Folly"; "Men Going to Work." His portraits, which are truthful and realistic to a marked degree, include the likeness of himself and his family, known as "Hymn to a Family"; King Leopold of Belgium (1904, Senate House, Brussels); Duchess d'Arenberg; Monsieur Schollaert, president of the Belgian Chamber; and a number of portraits of representative Americans, painted during a visit to New York. Leempoels received the great state medal at Vienna in 1895 and gold medals at Antwerp, Paris, and Buenos Aires (1910). He was made Chevalier of the Legion of Honor and Chevalier of the Order of Leopold.

LEER, lār. A town of East Friesland, in the Province of Hanover, Prussia, 50 miles west-northwest of Oldenburg, on the right bank of the Leda, near its junction with the Ems (Map: Germany, B 2). It manufactures machinery, cigars, tobacco, strawboard, creosoted block, soap, dye goods, lumber, and cabinetwork, and also has breweries, distilleries, iron foundries, and shipbuilding yards. A new harbor was completed in 1903, and the town carries on an extensive foreign trade in grain, groceries, animal

and dairy products, and in its own manufactures. The schools include a Gymnasium and a navigation school. Pop., 1900, 12,302; 1910, 12,690. Leer is believed to be one of the oldest towns of the province, although it obtained municipal rights only in 1823.

LEES, CHARLES HERBERT (1864-). An English physicist. Born in Glodwick, Oldham, he was educated at Owens College, Manchester, and at the University of Strassburg. He was demonstrator and then lecturer in physics at the University of Manchester and afterward professor of physics in the University of London. In 1910-13 he served as president of the London Physical Society. He wrote on the conductivity of heat (in crystals, metals, etc.), on explosives, and on electricity, and published school textbooks on practical physics.

LEES, JAMES CAMERON (1834-1913). A Scottish clergyman, born in London. He was educated at Glasgow and Aberdeen universities and, licensed to preach in 1855, was minister at Carnoch, Ross, in 1856-59 and of the abbey of Paisley in 1859-77. Becoming widely popular as a preacher, he was called to the pulpit of St. Giles's, Edinburgh, in 1877; there he remained until 1909. He served as chaplain in ordinary in Scotland to Queen Victoria from 1881 to 1901 and thereafter to the King. His writings include: *Tobersnorey* (1878); *History of the Abbey of Paisley* (1878); *Stronbury* (1881); *History of St. Giles's, Edinburgh* (1889); *Life and Conduct* (1893); *History of the County of Inverness* (1897).

LEETE, FREDERICK DELAND (1866-). An American Methodist Episcopal bishop, born at Avon Springs, N. Y. He graduated from Syracuse University in 1889, later studied there and at the University of Rochester, and entered the ministry in 1888. From 1891 to 1894 he was general secretary of the Young Men's Christian Association of Utica, N. Y. After a series of pastorates in large churches in Utica, Rochester, Syracuse, and Detroit, he was elected Bishop by the General Conference of 1912 and assigned to residence in Atlanta, Ga. He is the author of *Everyday Evangelism* (New York, 1909) and *Christian Brotherhoods* (ib., 1912).

LEETE, WILLIAM (c.1603-83). A Colonial Governor of Connecticut. He was born in England, where he studied law and served for a time in the Bishop's Court at Cambridge. He turned Puritan, emigrated to America in 1637, settled in the New Haven Colony in 1639, and was one of the founders of Guilford and a pillar of the church there. He served as Deputy Governor of New Haven from 1658 to 1661 and then as Governor until the Colony was united with Connecticut under the royal charter of 1662. He is said to have harbored the regicides Goffe and Whalley, and he certainly evaded the demands of the royal emissaries for their arrest. He was Deputy Governor of the united Colony from 1669 to 1676 and was then Governor until his death.

LEETO'NIA. A village in Columbiana Co., Ohio, 56 miles (direct) southeast of Cleveland, on the Youngstown and Ohio River, the Pennsylvania Company and the Erie railroads (Map: Ohio, J 4). There are large blast furnaces and machine shops manufacturing iron, bandsaws, planing machines, and miners' tools. Coal and natural gas are found in the vicinity. The water works are owned by the village. Pop., 1900, 2744; 1910, 2665.

LEEWARDEN, la'wår-den. A town of the Netherlands, capital of the Province of Friesland, in a rich and extensive plain, on the Harlingen and Gröningen Canal, 16 miles east-northeast of Harlingen (Map: Netherlands, D 1). Numerous canals intersect the town, and walks have been laid out on the site of the former fortifications. Leeuwarden has a handsome town hall and an ancient palace of the Stadholder of Friesland. There are several learned societies, among them the Frisian Society for the study of history, antiquities, and language, which possesses an interesting museum. The town has several libraries. The Gothic chancery of the sixteenth century was formerly the seat of the law court for Friesland and now contains the national archives and a provincial library. One of the curiosities of the town is the Oldehove, a massive but unfinished church tower, built of brick and dating from 1529. The industries include the manufacture of gold and silver ware, musical instruments, and mirrors. The town is a large fruit and beef market, the largest in Holland next to Rotterdam, and trades in flax, chicory, woolen goods, groceries, wines, and brandy. Pop., 1900, 32,162, 1912, 37,897. Leeuwarden was a walled town as early as 1190 and till the end of the thirteenth century was a port on a bay called the Borndiep, which the drifting sand gradually filled up.

LEEUWENHOEK, lä'wen-huk, ANTONY VAN (1632-1723). A Dutch naturalist, born at Delft. He did not receive a learned education, but was a man of means who devoted himself, for his own amusement, to the manufacture of lenses and to the investigation of microscopic forms of life, without, however, following any scientific plan of procedure. He discovered and identified the red corpuscles of the blood, described striated muscle fibres, and in 1686 demonstrated the circulation of the blood in the capillaries. He was also the first to find *Hydra*, Infusoria, and rotifers, many species of which he described. Leeuwenhoek studied the anatomy of many insects, observed the parthenogenetic reproduction of aphides, and disproved many cases of supposed spontaneous generation among animals. Whether he or Ludwig Hamm was the first to see living spermatozoa is a matter of dispute, the observations having been made at about the same time, in 1677. Most of Leeuwenhoek's writings were in the form of letters, published in London in the *Philosophical Transactions* of the Royal Society and in the *Mémoires* of the Paris Academy. One hundred and twelve of these letters appeared in the *Philosophical Transactions*. They were later published in a collected form under the Dutch title *Sendbrissen ontledingen en ontdekkingen, ondervindigen en beschouwingen* (7 vols., 1685-1718), and in Latin, *Opera Omnia, sive Arcana Naturæ Ope Exactissimorum Microscopiorum Selecta* (7 vols., 1715-22). An abridged English translation was published in London by Samuel Hoole in 1800. See BACTERIA.

LEEUWIN, loo'in, CAPE. The southwest extremity of Australia, marked by a first-class lighthouse, visible at 21 miles (Map: Australia, W., B 12). It was first sighted, in 1622, from the *Leeuwin* (Lioness), a Dutch vessel.

LEEWARD (loo'ard) ISLANDS. A part of the West India group (Map: West Indies, G 3). The name has four distinct applications: geographically it is sometimes used in reference to the Greater Antilles and adjacent islands, some-

times to the islands off the Venezuelan coast west of Trinidad (these were the Leeward Islands of the Spaniards), and sometimes to the islands lying between the Virgin group and Martinique (in the first two cases the name was used to denote islands not directly exposed to the trade winds); politically the name is applied to a British colony erected in 1871 and consisting of Antigua, Montserrat, St. Christopher and Nevis, a part of the Virgin group, Dominica, and their dependencies. The area of the colony is about 705 square miles. Pop., 1901, 127,434; 1912, 127,784, of whom about 95 per cent were negroes and colored persons. See articles on the islands named above.

LEEWAY. When a ship is steering in any direction and a strong wind is blowing, so as to make an angle with the direction of the ship, the ship's actual course is the resultant of two forces, one represented by her headway (or locomotive power), the other by the force urging her in the direction of the wind. This resultant must be somewhat between the two, and, with the same power of wind, the angle between the direction in which the ship is steering and the resultant will be great or small as the headway is diminished or increased. This angle represents the leeway, and the distance lost to leeward is shown by the side of the triangle subtending this angle. In computing the course, allowance must be made for leeway.

LEFANU, le-fá-nóo', JOSEPH SHERIDAN (1814-73). An Irish novelist and journalist, born in Dublin. He was educated at Trinity College, Dublin; joined the staff of the *Dublin University Magazine* (1837) and was its editor and proprietor from 1839 till 1872; purchased three Dublin papers and united them in the *Evening Mail* (1839); and wrote some 12 Irish novels, sensational, but fine in their way, the best of these being, perhaps, *Uncle Silas* (1864). In poetry he is notable for his weird and romantic touch, and he has written some stirring ballads. His *Purcell Papers*, a series of Irish stories, were edited with a memoir by A. P. Graves (London, 1880); and his *Poems* were for the first time collected and edited (ib., 1896), with an introduction, also by A. P. Graves.

LEFEBURE-WÉLY, le-fá'bur'-vā'lé', LOUIS JAMES ALFRED (1817-69). A French organist and composer, born in Paris. When only 15 years old, he succeeded his father as organist at Saint-Roch. In 1832 he entered the Conservatory and in 1834 won two second and the next year two first prizes. He further studied composition, counterpoint, and the organ with Halévy, Berton, Adam, and Séjan. From 1847 to 1858 he was organist at the Madeleine and, from 1863 to his death, at Saint-Sulpice. In 1850 he received the decoration of the Legion of Honor. As an organist, he was especially famous for his wonderful improvisation. His piano compositions were popular, but his organ pieces, "Cantiques," and "Offertoires" are superior. He also wrote an opéra comique, *Les recruteurs* (1861), symphonies for orchestra, chamber music, and masses.

LEFEBVRE, le-fév'r', CHARLES (1843-). A French composer. He studied at the Conservatory, where he won the Grand Prix de Rome and where he afterward taught. He composed *Judith*, a lyric drama in three acts (1879); *Melka* (1883); *Le trésor*, based on Coppée (1884); *Eloa*, a lyric poem based on De Vigny (1889); *Zaire*, from Voltaire (1887);

Sainte Océile (1896); *La messe du fantôme* (1899); *Toggenburg*, from Schiller (1906). He composed a number of symphonies, among which are *Symphonie en ré* and *Dalila*; sonatas; instrumental music; etc.

LEFEBVRE, le-fèvr', FRANÇOIS JOSEPH, DUKE OF DANZIG (1755-1820). A marshal of France. He was born at Ruffach in Alsace, entered the army at 18 and was a sergeant in the French Guards when the Revolution broke out. He rose rapidly in rank. Hoche in 1793 made him brigadier general and the next year general of division. He fought at Fleurus and along the Rhine from 1794 to 1797. In the latter year he was commander in chief of all the French armies for a few months after the death of Hoche. He took part with Bonaparte in the coup d'état of 1799 and in 1804 was made a marshal of the Empire. He distinguished himself in the war against Prussia in 1806-07. He conducted the siege of Danzig and after its capture was created Duke of Danzig (1808). He won fresh laurels in the campaign in Spain in the same year, especially by his capture of Bilbao and Segovia. In 1809 he was present at Eckmühl and Wagram and put down the insurrection in the Tirol. During the Russian campaign he had the command of the Imperial Guard and in 1814 fought valiantly against the allies in France. Submitting to the Bourbons after Napoleon's abdication, he was made a peer. During the Hundred Days he again joined Napoleon and was not pardoned by the Bourbons until 1819.

LEFEBVRE, JULES JOSEPH (1836-1912). A French historical and portrait painter. He was born at Tourman (Seine-et-Marne), studied with Léon Cogniet, and won the Prix de Rome in 1861. His drawing is correct, and his knowledge of form is complete, but he lacks power, his treatment is smooth, and he represents the academic tendencies of his day. Lefebvre was long a professor at the Ecole des Beaux-Arts and is chiefly important as an excellent and sympathetic teacher who numbered many Americans among his 1500 or more pupils. His paintings are usually single figures of beautiful women. He created a great sensation with his "Reclining Woman" (1868) and with the allegory of "Truth" (1870), a nude woman holding aloft a mirror, probably the best known of his works, and now in the Luxembourg. His other works include the "Grasshopper" (1872, St. Louis Museum); "Mignon" and "Graziella" (1878), both in the Metropolitan Museum, New York; "Slave Carrying Fruit" (1874, Ghent Museum); "Yvonne" (1876, Luxembourg); "Diana Surprised" (1879, Ecole des Beaux-Arts); "La Fiammetta" (1881), from Boccaccio; "Psyche" (1883); "Lady Godiva" (1890); "A Daughter of Eve" (1892). Among his best portraits were those of M. L. Raynaud and the Prince Imperial (1874). Among his many decorations were a first-class medal at the Paris Exhibition of 1878 and the medal of honor in 1886. He was a Commander of the Legion of Honor and a member of the Institute.

LEFEBVRE-DESNOUETTES, le-fèvr'-dâ'-no'et', CHARLES, COUNT (1773-1822). A French general, born in Paris. He entered the French army, serving in four different armies during the Revolution, and afterward as aid-de-camp to Napoleon at Marengo. He distinguished himself at Austerlitz, was made brigadier, and in 1808 general of division. He conducted the siege of Danzig, from which he got his title. At the siege

of Saragossa he was taken prisoner by the English, but escaped from England and took part in the Austrian, Russian, and Prussian campaigns, and fought in France against the allies in 1814. He was made a peer by Napoleon in 1815 and was at Fleurus and Waterloo. Condemned to death by the Bourbons, he escaped to the United States and attempted to establish a colony of French refugees in Alabama. Despondent and homesick, he obtained permission to return to France, but was drowned off the coast of Ireland on his way home.

LEFEBVRE, G. J. SHAW. See SHAW-LEFEBVRE, GEORGE JOHN.

LEFÈVRE, le-fèvr', **FAVRE**, fâ'vr', or **FABER**, fâ'bâr', PIERRE (1506-46). One of the six coadjutors of Loyola in the establishment of the Order of Jesuits. He was born at Villaret in Savoy. He came of a peasant family and went to study at the College of Sainte-Barbe in Paris (1527), where he became Loyola's tutor and closest friend. With five others he laid the foundations of the order at Montmartre, Aug. 15, 1534. Lefèvre received the appointment of professor of theology in the Collegio di Sapienza in Rome in 1537 and the next year was sent to Parma on a special mission for the reformation of the diocese. He visited Germany in 1541, when he became a member of the Assembly of Regensburg, and again in 1544, when he founded the Jesuit College at Cologne. He established the Jesuit colleges at Coimbra, Madrid, Valladolid, and Valencia. He died in 1546, on his way to join the Council of Trent. After his death he was canonized. Lefèvre was a man of great earnestness, learning, and eloquence, kindly in nature and pure in life.

LEFÈVRE D'ESTAPLES, dâ'tâ'pl', JACQUES. See FABER, JACQUES LEFÈVRE D'ESTAPLES.

LEFFERTS, MARSHALL (1821-76). An American engineer, born at Bedford, Long Island. He was early a clerk, a civil engineer, and in business. For 11 years (1849-60) he was associated with various telegraph companies. He patented an automatic system of telegraphic transmission and became electrical engineer of the American Telegraph Company and consulting engineer of the Atlantic Cable Company, for which he made valuable inventions. In 1861 he went to the defense of Washington in command of the Seventh Regiment, New York State Militia, was called out again in 1862 and in 1863, and was on duty in New York City during the draft riots of July, 1863. In 1867 he resigned his office with the Western Union (formerly the American) Telegraph Company and acquired an interest in its commercial news department. Two years later he became president of the Gold and Stock Telegraph Company and in 1871 took control of the commercial news department after its purchase by this company.

LEFFLER, M. G. MITTAG. See MITTAG-LEFFLER, MAGNUS GÖSTA.

LEFKOSIA, lèf'kô-zè'a. See NICOSIA.

LE FLÔ, le flô, ADOLPHE CHARLES EMMANUEL (1804-87). A French general and politician. He was born at Lesneven, was educated at the military school of Saint-Cyr, and, having joined the army (1825), took part in the Algerian campaign of 1831. In 1848 he was promoted to be brigadier general. In the same year he was sent as Ambassador to Russia, whence he returned in 1849 and became a member of the National Assembly. At first an adherent of Louis Napoleon,

Le Flô finally opposed his designs and was among those whom the coup d'état of 1851 drove into exile. Returning to France in 1857, he lived in retirement until after the fall of Napoleon. During the German War of 1870-71 he was for a short time Minister of War and at its close was appointed by Thiers to fill the same office. He soon resigned and was Ambassador to Russia from 1871 to 1879. A monument to him was erected at Lesneven in 1899.

LEFORT, le-fôr', FRANÇOIS (1653 or 1656-99). A Russian admiral and statesman, born and educated at Geneva. After serving for some time in the French and Dutch navies, he entered the Russian army and distinguished himself against the Turks and Tatars. He took an active part in the intrigues which made Peter the Great the sole ruler of Russia (1687-89). Peter never forgot Lefort, who became his favorite and devoted servant and, next to the Czar, the most important personage in Russia. He was a man of great acuteness and ability and, with Patrick Gordon, became a great force for Occidental civilization in Russia. He remodeled the Russian army and laid the foundation of the Russian navy. In 1694 he was made grand admiral and generalissimo. When Peter the Great visited foreign countries in 1697 Lefort was the chief of the embassy, in the train of which the Czar traveled incognito. Consult Blum, *Franz Lefort* (Heidelberg, 1867).

LEFRANC, le-frân', ABEL (1863-). A French critic, born in Oise. He was three times a laureate of the French Academy, became president of the Société des Etudes Rabelaisiennes, and served as a professor at the Collège de France. He gained a position of authority on sixteenth-century literature. In 1910 he visited America and lectured at Harvard, and in 1913 he was exchange professor at the University of Chicago. He wrote *Histoire de la ville de Noyon et de ses institutions jusqu'à la fin du XIIIe siècle* (1887); *La jeunesse de Calvin* (1888); *Les dernières poésies de Marguerite de Navarre* (1896); *Etudes sur le platonisme en France à l'époque de la Renaissance* (1896-1901); *Les idées de Marguerite de Navarre* (1898); *Publications des œuvres inédites d'André Chénier* (1899-1903); numerous studies in the *Revue des Etudes Rabelaisiennes* (1903-09); *Le tiers livre de Pantagruel et la querelle des femmes* (1904); *Leçons sur Molière et sur le roman français au XVIIe siècle* (1904-09); *Les navigations de Pantagruel* (1905); *Défense de Pascal: Pascal est-il un faussaire?* (1906); *Etudes sur Maurice Guérin et sur ses œuvres inédites* (1908); critical edition of *Jean Calvin* (1911); *Les œuvres de François Rabelais* (1912-13).

LEFUEL, le-fwèl', HECTOR MARTIN (1810-81). A French architect, born at Versailles. He received instruction from his father and Huyot before he entered the Ecole des Beaux-Arts. The Prix de Rome, which he won in 1839, enabled him to study the great monuments of classical architecture. His first important commission was the Salle de Spectacle in the palace of Fontainebleau (1853), but his principal work was on the new buildings of the Louvre and Tuileries as successor to Visconti upon his death in 1853. The new façade of the Grande Galerie, the remodeling of the pavilions Marsan and De Flore, and the new façade on the Rue de Rivoli were his work. He also built the national porcelain factories at Sèvres. He was elected a member of the Institute in 1855.

LEG (from Oícel. *leggr*, leg, Dan. *læg*, Swed. *låg*, calf of the leg). That part of the lower extremity which lies between the knee and the ankle. It consists of two bones, the tibia and fibula (see **SKELETON**; **FOOT**), and of masses of muscles (together with nerves and vessels) which are held in their position by coverings of fascia and are enveloped in the general integument.

The shaft of the tibia is of a triangular prismoid form and presents three surfaces and three borders. The internal surface is smooth, convex, and broader above than below; except at its upper third, it lies directly under the skin and may be readily traced by the hand. The external and the posterior surfaces are covered by numerous muscles. The muscular mass forming the calf (formed by the gastrocnemius, soleus, and plantaris muscles) is peculiar to man and is directly connected with his erect attitude and his ordinary mode of progression. The anterior border of the tibia, the most prominent of the three, is popularly known as the shin and may be traced down to the inner ankle. The fibula, or small bone of the leg, lies on the outer surface of the tibia and articulates with its upper and lower extremities and with the astragalus inferiorly. It affords attachment to many of the muscles of this region. The region is nourished by the anterior and posterior tibial arteries, into which the popliteal artery separates. Both these arteries occasionally require to be tied by the surgeon in cases of wounds or aneurism. The blood is returned towards the heart by two sets of veins—the deep, which accompany the arteries, and the superficial, which are known as the internal or long saphenous and the external or short saphenous veins. These superficial veins are very liable to become permanently dilated or varicose (a condition the nature and treatment of which are considered in the article **VARICOSE VEINS**) if there is any impediment to the free transmission of the blood, or even from the mere weight of the ascending column of blood, in persons whose occupation requires continuous standing. The nerves of the leg, both sensory and motor, are derived from the great sciatic nerve and from its terminal branches, the internal popliteal and the external popliteal or peroneal nerve. In cases of fracture or broken leg the two bones are more frequently broken together than singly, and the most common situation is at the lower third. The tibia is more liable to fracture than the fibula, in consequence of its sustaining the whole weight of the body, while the fibula has nothing to support.

Bandy Leg, or Bowleg. This is a condition in which the curve of the tibia is increased, and the leg is bowed with the concavity inward. It is due to allowing a child to walk too early, or to rickets (q.v.), or rarely to muscular contraction before the child is put on his feet. The condition may be remedied in many cases by appropriate orthopedic appliances or by means of a surgical operation, in which the outer condyle of the femur is cut off in a slanting line, and the limb allowed to fall into its new position. Or the shaft of the bone may be broken, the leg straightened, and bandaged in proper position until healing is complete.

See **KNOCK-KNEE**, also cut in article **ACHILLES TENDON**.

LEGACY (OF. *legacie*, from Lat. *legatum*, bequest, from *legare*, to bequeath, send on a com-

mission, from *law*, law). A gift of a chattel, a sum of money, or other personal property made by the will of a deceased person. The term is synonymous with bequest. Devise (q.v.) is the corresponding term in case of gifts by will of real estate.

Legacies may be either specific or general. A specific legacy is a bequest of a specific thing, as a particular horse, picture, piece of silver, or other article. A general legacy is a bequest payable out of the general assets of the estate of the deceased person. It may be a gift of money or it may be of property without in any manner separating or distinguishing it from other property of like kind belonging to the testator. The important difference between the two kinds of legacies is that, if the subject matter of the specific legacy fail, i.e., if the picture be destroyed or disposed of by the testator during his lifetime, or if the horse die, the legacy lapses, and the legatee takes nothing under his bequest. In the case of general legacies, as the legacy is not to be paid by or out of any particular property, the legacy does not lapse so long as there are any assets of the estate applicable to the payment of legacies. When, however, there are not sufficient assets in the estate (after paying the testator's debts, which must first be paid) to pay legacies, the specific legacies must be paid in preference to general legacies, which must abate, i.e., be reduced *pro rata*. The order of abatement may, however, be fixed by the terms of the will.

A third class of legacies, which partakes of the character of both specific and general legacies, consists of what are known as demonstrative legacies. A demonstrative legacy is one which the testator directs to be given out of specific money or property or its proceeds, as, e.g., a gift of a certain number of stocks and bonds out of a larger number, or of a chattel to be purchased out of the proceeds of a certain portion of the testator's estate. The demonstrative legacy is like a specific legacy in that it is given out of a specific fund, and in that it does not abate with general legacies, but it is like a general legacy in that it does not generally abate with the loss of the particular fund or property out of which it is to be paid. It is generally provided by statute that legacies shall not be payable until the expiration of one year after the testator's death, from which date interest is payable on the legacy if there are funds and it is not otherwise provided by the will.

If the legatee dies before the testator, the legacy in general lapses and will pass to the residuary legatee, i.e., the one to whom the will gives all personal property not otherwise disposed of. If there is no residuary clause in the will, lapsed legacies pass, under the statutes of distribution in force in the various jurisdictions, to the next of kin of the testator. In a few States it is provided by statute that legacies to a child of the testator, in case of the child's death before the death of the testator, shall go to the child's issue. Legacies may also in effect lapse by ademption, i.e., some act of the testator during his lifetime by which he pays or satisfies the legacy in advance of his death. (See ADEMPMENT.) In general any legal person may be a legatee. Legacies to a married woman, however, upon payment, vest in her husband at common law, and a legacy to an infant is payable to his guardian for the infant's benefit. In many

States there are various statutes limiting the power of a testator to make bequests to corporations and to aliens, so that bequests to corporations, and also for charitable uses not authorized by the statute, are void. (See USES AND TRUSTS.) Formerly a bequest to the witness of a will rendered the will void. Now, under most statutes of wills the will is valid, but the bequest is void. In some States bequests to the testator's illegitimate children are void. In general such bequests are valid, but the word "children," when used in a will, will be deemed to mean legitimate children, if there are such, to the exclusion of illegitimate. The more important rules as to the construction of clauses giving bequests are discussed under WILL. See also ADMINISTRATION. Consult the authorities referred to under WILL.

LEGACY DUTY. See DEATH DUTIES.

LEGAL CAPACITY. See CAPACITY, LEGAL.

LEGAL EDUCATION. On the Continent of Europe before 1088. In the time of the Roman Republic it was customary for a prospective lawyer to begin at the age of 16 to listen systematically to the advice given to clients by some learned juriconsult, and the student also had to familiarize himself with the Twelve Tables. It was thus that Cicero learned law under the two Scævolas. In the time of Augustus the study of the Twelve Tables was superseded by the study of the Prætorian Edict. About the same time certain juriconsults began to devote themselves principally to giving instruction. Among the earliest and most famous of these teachers were Labeo and Sabinus, today best remembered for their connection with the two sects of lawyers, the Proculians and the Sabinians. From about the beginning of the third century there were systematic law schools, especially at Rome and at Constantinople. The course in the law schools covered four years, and students were supposed to complete it at the age of 20. Before 533 the texts studied were the Institutes of Gaius, the same author's treatises on married women's property, guardianship, wills, and legacies, the Prætorian Edict, Papinian, Paulus, and the Constitutions. By a constitution of 533 the course of study was rearranged, and the old texts gave place to Justinian's Institutes, Digest, and Code. The framing of the *Corpus Juris Civilis*, indeed, was partly guided by the needs of students and was largely executed by the professors of Constantinople and Berytus.

In the East the study of the *Corpus Juris Civilis* was superseded by Greek paraphrases and then by new treatises. In Italy, however, the study of the *Corpus Juris Civilis* was never wholly abandoned. It is not known to what extent there was systematic study of law in the Dark Ages, but in the eleventh century Pavia and Ravenna were centres of law teaching, the former being preëminent in Lombard law and the latter in Roman law.

On the Continent of Europe since 1088. The year 1088 has become recognized rather arbitrarily as the beginning of European university instruction. It is taken as the year of the founding of the University of Bologna, because it marks, as nearly as practicable, the commencement of the teaching of law by Irnerius. By the middle of the twelfth century the appearance of Gratian's Decretum made possible a systematic study of the canon law. Academic degrees appeared in the thirteenth century. Early

in the fifteenth century the bachelor's degree was awarded by the universities to students of both the canon and civil law, four and five years' study respectively being required; and higher degrees for additional years of study. The teaching was by lectures which elucidated the text, developed a systematic view of the subject, and solved hypothetical problems. Soon after the time of Irnerius the study of the civil and the canon law spread to the universities that gradually arose in all parts of Europe.

Throughout the continent of Europe the universities are to-day the only route to the legal profession. The requirement for admission to the course in law is a general education substantially equivalent to that acquired by two or three years of residence as an undergraduate of an American college. The course in law covers not less than three nor more than four years. From country to country there are some differences in details. In Germany, e.g., admission to the bar is secured exclusively through a government examination, for which, however, university work equivalent to the requirements for a degree affords the only possible preparation; and the examination must be succeeded by practical work for three years, in which time the candidate passes successively from administrative duties to assisting a judge of one of the lower courts and then to helping a practicing lawyer with the daily tasks of a law office; and for persons hoping to become administrative or judicial officers these three years of practical work are followed by a second government examination. In France, on the other hand, the degrees are a baccalaureate in two years, a licentiate in three years, and a doctorate in four years; and the licentiate degree admits to the bar as an *avocat*, whereas two years of study under the law faculty suffice, without a degree either in general knowledge or in law, to admit the candidate to the grade of an *avoué*. Finally, in Germany, but not in France, almost all legal instruction is given by persons who have never been engaged in practice.

In England. The study of the *Corpus Juris Civilis* and of the *Corpus Juris Canonici* seems to have entered the universities of Oxford and Cambridge as soon as they were founded. The civil law continues to be taught in the English universities. The canon law ceased to be taught after the Reformation. The common law found little recognition in the universities until recently; and, indeed, even to-day the universities can hardly be said to be making a serious attempt to become places for the professional study of law. The famous lectures on the common law delivered at Oxford by Blackstone, beginning in 1753, were addressed to audiences largely composed of undergraduates, and kept in mind to a considerable extent the needs of persons who, without intending to enter the profession, wished to learn the general features of the political and legal system of their country. Both Oxford and Cambridge have a considerable number of teachers of civil law and of common law; but the instruction gives less prominence to common law than to civil law and to such comparatively non-professional topics as constitutional law, international law, and analytical jurisprudence; and the courses are taken chiefly by undergraduates as part of their preparation for the degree of bachelor of arts. There is provision, both by instruction and by appropriate degrees, for law study by graduates in arts who expect to become

lawyers, but these law degrees, of which fewer than 20 are annually conferred in each university, are taken chiefly by persons who have pursued the requisite studies in London. Indeed, the Inns of Court, which alone have the power to call to the bar, continue to be substantially the only centres for a barrister's education. These four Inns—the Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn—have been for about six centuries the learned societies to which every barrister belongs, and their historic associations, even independently of the conservatism of the profession, render it very difficult for legal education to become domiciled elsewhere. About the middle of the fifteenth century there were 10 Inns of Chancery, besides the four Inns of Court, and it was common for students to begin with the former and to complete their education at the latter. The total residence requisite for admission to the bar was apparently eight years. This time, however, was not wholly devoted to law, for other accomplishments, including singing and dancing, were pursued by the students, and, indeed, it seems to have been common for persons who did not contemplate entering the profession to go to the Inns, rather than to the universities, for the final embellishments of education. In those days, during the four terms of court, all barristers were resident in the Inns, and thus the students had excellent means of preparation for the profession. There were systematic lectures, called readings, by barristers, and at public moot courts and private boltings and even at meals the students discussed actual and hypothetical cases. In the sixteenth century students are known to have made great use of the *Natura Brevium*, the Old Tenures, and Littleton's Tenures; and the readings and mootings and boltings continued. After the middle of the seventeenth century Coke's Institutes became the chief textbook; and about the same time the old machinery of teaching began to be disused. In addition to the means of study already indicated, it is known that students made collections of notes from the Year Books and other reports of cases and that they spent much time in copying pleadings. From the middle of the eighteenth century the student, while keeping his terms at his Inn, began his studies by copying pleadings in the office of a special pleader and passed thence to the office of a barrister in general practice, paying to these instructors such substantial fees as procured adequate guidance in study. This remains the common mode of preparation for the bar in England. The student, after passing a preliminary entrance examination in grammar, composition, Latin, and the history of England—from which entrance examination he is exempt if a graduate of one of the universities—enrolls himself in one of the Inns. He next keeps 12 terms by eating six dinners at the Inn each term—though members of the universities need eat only three dinners each term. Meanwhile he has probably been passing six months in the office of a solicitor in good conveyancing practice and a year or two in the office of a barrister with a good chamber practice, and thus he has learned, among other things, to frame statements of cases to be submitted by a solicitor to a barrister, to give opinions upon such cases, and to frame pleadings. Simultaneously he attends court and does the reading necessary for the examinations for call to the bar. These examinations include Roman

law and constitutional law; but they are devoted principally to the ordinary heads of English law and equity. In the absence of extraordinary circumstances admission cannot occur until three years after entering the Inn. The examinations are conducted by the Council of Legal Education, which is appointed by the Inns. The Council maintains lectures by readers and assistant readers, but these lectures are not largely attended, and, though established half a century ago, have not yet made much impression upon the system of legal education.

The solicitors are under regulation by the Incorporated Law Society, which maintains lectures and examinations similar to those of the Council of Legal Education. The Incorporated Law Society, however, is the older body, and lectures and examinations for solicitors considerably antedate lectures and examinations for barristers.

In the United States. In America, as elsewhere, legal education was once obtained exclusively in lawyers' offices. Professorships entitled professorships of law, but devoted, it would seem, to presenting popular and not technical views of law to undergraduate college students and to the general public, were founded rather early, e.g., at William and Mary College in 1779, at the College of Philadelphia in 1790, at Columbia College in 1794, and at Harvard College in 1815. The professorship at Philadelphia resulted in a course of lectures by Justice James Wilson in 1790-91. The professorship at Columbia was twice held by Chancellor Kent, first from 1793 to 1795, and secondly from 1823 to 1826; and the work of Kent's second holding of the professorship was of a technical nature and produced the *Commentaries on American Law*. The Harvard professorship, called the Royall, was first held by Isaac Parker.

The earliest classroom instruction in technical law was furnished not at the colleges named, but in the famous private law school founded at Litchfield, Conn., by Tapping Reeve and maintained until 1833. This institution, though unincorporated, was thoroughly organized, having a course of 14 months, pursuing the lecture system, . . . examinations and moot courts, and . . . in some years as many as 50 students from all parts of the United States. Thus, in the case of Litchfield it is clear that there was a law school, whereas in some other cases it is difficult to say whether there was a law school or simply an ordinary law office paying extraordinary attention to law students. The Harvard Law School dates from 1817, when there were two professors and when students who had completed their general education began to come to Harvard for professional instruction; but the Harvard Law School was not conspicuous until 1829, when Justice Story became Dane professor of law. There was a private law school in 1821 at Needham, Va.; and that, though it lasted but a short time, it was carefully managed as indicated by Taylor's *Journal of the Law School*. There was a private law school at Northampton, Mass., in 1823; and this school ceased in 1829, when one of its instructors became Royall professor at Harvard. The Yale Law School dates from 1824, being apparently an outgrowth of a private school. There was a private law school at Winchester, Va., in 1826, and during its short existence it produced Tucker's *Commentaries on the Laws of Virginia*. The law school of the University of Virginia

was opened in 1826. The Cincinnati Law School was opened in 1833.

There has been a steady growth of law schools in number and in attendance; and in recent years this growth has been so emphatic as to prove that the law schools are now recognized as the only places for obtaining adequate preparation. In 1890-91 there were 54 law schools, with 406 instructors and 5252 students. In 1913-14 there were 114 law schools, with approximately 1200 professors and special and assistant instructors, and 15,000 students, including about 200 women. The numerical advances during this period were accompanied by other changes, most of them unquestionably changes for the better.

The requirements for admission have been increased so that now one-half of the schools require at least a high-school education, and several require a college degree or its educational equivalent. The law-school course has been lengthened, on the average, about one year, so that now 80 out of 114 schools offer a course of three years. There has been a tendency to change the method of study from the lecture and textbook systems to the case system, which was introduced at Harvard by Professor Langdell in 1870, and which gained a foothold at the Albany Law School in 1889, and at the State University of Iowa and Columbia University in 1890.

There is difference of opinion as to the merits of the three systems of legal teaching—or, better, of legal study. Under the lecture system the student first derives his knowledge at the lecture and from the lecturer; and the student very probably takes notes and ultimately answers questions as to his understanding of the instruction given. Under the textbook system the student primarily derives his knowledge at his own room and from the statements made by text writers; and he goes to the lecture room to be questioned on his recollection and understanding of the statements in the textbooks, and to receive more light from the instructor. Under the case system the student primarily derives his knowledge of law at his own room and through his own analysis of select reported cases, and after extracting from these cases the propositions of law necessarily involved in the decisions—the *rationes decidendi*—he goes to the lecture room to state and discuss these cases and to participate in the solution of hypothetical problems based upon them. Under each system there may be statements of law by the instructor, reading textbooks, study of reported cases, and discussion of problems; but, notwithstanding the possibility that each system may be so treated as to seem like one of the others, and notwithstanding the personal peculiarities which cause each instructor to pursue to some extent a method of his own, the distinction between the several systems is in practice readily drawn, and each law school is commonly known, according to the system to which it is principally devoted, as a lecture school, a textbook school, or a case school, although some of them attempt to combine systems and thus are rather difficult of classification.

There were, in 1913-14, 114 law schools in the United States, including the law departments of universities. Forty-five of these schools have joined the Association of American Law Schools, the purpose of which is the consideration and discussion of the problems of legal education, especially the improvement of law schools. One-

half of this number may properly be classed as case schools; and some of the others combine the study of cases with the use of standard textbooks. Membership in this association is now restricted to schools requiring a three-year course. Of the other schools not in this association, the majority adhere to the textbook system, and a few to the strict lecture system; but in many the study of leading cases in addition to the regular work is encouraged. There are 30 evening schools, 10 with separate evening and day courses, and the remainder have day sessions exclusively, although many give all lectures either before or after the usual hours of legal business, so as to afford students the opportunity of gaining experience in law offices at the same time. The academic year averages between 30 and 40 weeks. Eighty schools have a three-year course, and the remainder two years, with the exception of two which offer only a one-year term. In a number of schools there are opportunities for a four-year course. Harvard and Pennsylvania now require a degree in arts or in science, or the equivalent of a full college course, as a preliminary qualification for admission. Columbia, Yale, and California require three years' college work; Chicago, Minnesota, Missouri, Wisconsin, and Leland Stanford Junior require two years; and 15 schools require one. About one-half of the remaining schools require a preliminary education equivalent to a high-school course, about one-fourth something less than this, and the remainder make no conditions of this character.

There are now approximately 15,000 law students, of whom about 3000 hold college degrees, and approximately 4000 took the degree of LL.B. at the close of the academic year 1913-14. The value of the grounds and buildings of the law schools in the United States is estimated at \$2,500,000, and the endowment funds at \$1,500,000; and there are over 500,000 volumes in their libraries. A number of the schools maintain legal periodicals of value to the profession.

Closely connected with improvements in law schools is a recent advance in requirements for admission to the bar. The American Bar Association has made systematic efforts to raise the standard of admission to the bar in all States. Prior to 1880 the examination of candidates for admission was conducted exclusively by judges of the various courts, and consisted entirely of oral questions. There was, therefore, no uniformity in such examinations. In most States the candidates who received a diploma from a recognized law school were admitted without further examination. No fixed period of study was prescribed. At present half of the States require certain preliminary education; 35 States have State boards of law examiners; 40 States have uniform examinations; the examinations are conducted in writing in 40 States; 25 States require three years' study of the law before taking the examination for the bar. Examinations often include, in addition to definitions and classifications that have been substantially memorized, the solution of hypothetical problems resembling those which will arise in the actual prosecution of trial cases.

Legal education is a frequent subject of discussion at meetings of law societies. The American Bar Association has a standing committee on legal education and admission to the bar, and also a section of legal education. In 1901 the Association of American Law Schools was

founded, holding meetings at the same time and place as the American Bar Association.

Law Libraries in the United States. According to a report of the Committee of the American Association of Law Libraries, printed in the *Law Library Journal*, October, 1912, there were then in the United States and Canada 639 law libraries, containing 5,889,572 volumes. The report gives the name and location of each library, the name of its librarian, and the number of volumes. A report made in 1908 by the United States Bureau of Education in its "Statistics of Public, Society, and School Libraries having 5000 volumes and over," lists only 109 law libraries, but states also whether these libraries are free, free for reference, free for students, subscription libraries free for reference, or subscription only. Law libraries are among the earliest forms of special libraries and their growth in recent years has been rapid. There is a considerable demand for the addition of law books to public libraries ("Law Libraries and the Public," in *Law Library Journal*, January, 1914), due to the desire of citizens more intelligently to perform the functions of democratic government. Law libraries fall into three chief classes: (1) Bar Association libraries; (2) subscription libraries; and (3) law-school libraries. Law-school libraries are further divided into two classes, viz., (1) those serving isolated law schools, and (2) those which serve law schools which form part of a university. By a university law-school library is meant the library of a law school which has a vital, organic connection with the university. The library of the isolated law school performs only one of the functions which a university law-school library should perform. It is used only as a means of assisting technical students of the law. A university law-school library serves this purpose, but at the same time is an essential aid to students in government, philosophy, ethics, history, social science, and economics.

The Association of American Law Schools apparently had in mind only the technical requirements of a law school when in 1912 it decided to "require each school to own a law library of not less than 5000 volumes" in order to be entitled to membership in the Association. Obviously 5000 volumes are not sufficient equipment for a university law-school library. Even as a technical library this small number does not provide for graduate work, for research by professors, nor for the needs of legal writers; and it is even less satisfactory as a source for graduate students in history and politics.

The Association of American Law Schools, however, acted wisely in placing a minimum requirement, for only within recent years have some law schools realized the necessity for providing a library. The importance of the library has increased since the more general adoption, either wholly or in part, of the case system. This system sends students to the original reports and statutes, and prevents too great reliance on textbooks. Its adoption was attended by difficulties which resulted in the preparation of case books. Langdell in the first volume of his "Selection of Cases on Contracts," 1871, states that when he proposed to teach law by means of cases he "was met by what seemed at first to be an insuperable practical difficulty, namely, the want of books; for though it might be practicable in the case of private pupils hav-

ing free access to a complete library, to refer them directly to the books of reports, such a course was quite out of the question with a large class, all of whom would want the same books at the same time." Consequently Langdell began the publication of a series of selected cases on the various subjects of the law. The effect of the publication of case books on the use of the library was unexpected. Where the case system is properly maintained, the result is that case books stimulate the interest and arouse the curiosity of students so that the book of cases is merely a starting point in the investigation of a topic. Law-school libraries therefore are fast increasing in size, eight of them, according to available statistics, having more than 30,000 volumes each. These libraries are:

LAW SCHOOLS	Volumes
Harvard University	150,000
Columbia University	55,000
University of Pennsylvania	50,125
Cornell University	44,000
Northwestern University	40,000
University of Chicago	36,000
Yale University	35,000
University of Michigan	32,000

The case system requires also duplication of books, so that the figures given above necessarily do not indicate different titles but include many duplicates required by students needing to examine the same volume at the same time. The law-school library under modern conditions, therefore, is an essential part of the apparatus for legal students, and its administration is of vital interest to faculty and students. It has become recognized that the use of law books is a technical matter which requires special instruction. The function of the library is of equal importance with that of the classroom and to the duties of the law librarian has been added the teaching of the mechanics of book use. This is done usually by daily assistance in the library, but is often supplemented by lectures and systematic practice work. Courses of instruction in the use of law books are part of the regular curriculum in 30 law schools in the United States, while occasional courses are given in nine others.

One other development in law libraries in the last 25 years is the increased demand for foreign and international law. This demand results first from the study of comparative law in the universities, but second, quite as much, from increased interest in international affairs due to the work of international peace organizations, and the actual development of business as a cosmopolitan concern rather than a national interest.

Bibliography. Waterhous, *Fortescutus Illustratus* (London, 1663); Dugdale, *Origines Juridicales* (ib., 1671); Fortescue, *De Laudibus Legum Angliæ* (ib., 1775); Savigny, *Geschichte des römischen Rechts*, vol. iii (Heidelberg, 1834); *Report to the House of Commons from the Select Committee on Legal Education* (London, 1846); Pearce, *Guide to the Inns of Court* (ib., 1855); *Parliamentary Report of the Commissioners to Inquire into the Arrangements in the Inns of Court and Inns of Chancery for Promoting the Study of the Law* (ib., 1855); Smith, *History of Education for the English Bar* (ib., 1860); Poste, *Gaius* (Oxford, 1871); Hart, *German Universities* (New York, 1874); Muther, *Geschichte der Rechtswissenschaft* (Jena, 1876); Holland, *Institutes of Justinian*

C. Ledlie (3d ed., Oxford, 1901); Gibson and Chuckerbutty, *How to Become a Barrister* (London, 1902); Roscoe Pound, "A New School of Jurists," in *Nebraska University, University Studies*, vol. iv (Lincoln, 1904); *Akademisches Taschenbuch für Juristen* (Berlin, semiannually); *Annuaire de l'instruction* (Paris); *Calendars of the Universities of Oxford, Cambridge, London, Dublin, Edinburgh, and Glasgow*; *The Green Bag* (Boston, monthly); *Le livre de l'étudiant de Paris* (Paris, annually); *Reports of the American Bar Association* (Philadelphia, annually); *Reports of the Commissioner of Education of the United States* (Washington, annually).

LEGAL ESTATE. An estate or interest in lands cognizable at common law, as distinguished from equity, and defined and protected by the ordinary courts of common law, as distinguished from chancery. Strictly speaking, all estates are legal, the expression "equitable estate" having been invented at a comparatively recent date as a convenient description of the rights in equity which a person may have in lands which are legally vested in another. Thus, where lands are conveyed to A in trust for B, the legal estate is in A, the trustee, but B's rights as beneficiary of the trust (*cestus que trust*) are for some purposes conveniently described as his equitable estate in the premises. A, as the legal owner, is the only person entitled to protect the land by common-law process against trespass or disseisin, but the equitable interest of B, on the other hand, may be alienated by him by deed or last will, or will descend to his heirs in the same manner as though it were a legal estate. Such artificial splitting up of the property in land into a legal and an equitable estate has been a common thing in England since the Wars of the Roses (when it was freely resorted to for the purpose of enabling legal owners to escape the burdens and disabilities of such ownership) and in the United States from before the Revolution. Whenever the two estates, whether by alienation, descent, or otherwise, become united in the same person, they coalesce or merge into one, and that one the legal estate. In other words, in that event the equitable estate ceases, leaving only the legal estate surviving. See ESTATE; EQUITY; TRUST; REAL PROPERTY.

LEGAL HOLIDAY. See HOLIDAY; HOLIDAYS.

LEGAL HUNDRED, THE. This is the title of the governing conference which conducts the denominational business of the Wesleyan Methodist church, including the stationing of the ministers and the oversight of all work of the church. It was established by John Wesley in 1780 in a paper known as "the Deed of Declaration." It meets annually and is a self-perpetuating and self-governing body. Membership in the

body is considered a great honor. All Wesleyan ministers are members of the larger body called "the Conference" and are eligible to election in the Legal Hundred when a vacancy occurs as the result of a death or resignation.

LE GALLIENNE, le gal'li-en, RICHARD (1868-). An American writer. He was born in Liverpool, England; graduated from Liverpool College, for seven years was in business, and for a few months in 1889 was private secretary to the actor Wilson Barrett. In 1891 he became literary critic for the *Star*, and soon joined also the staffs of the *Daily Chronicle* and the *Speaker*. Two years later he was involved with Robert Buchanan in a controversy on the question "Is Christianity Played Out?" The outcome was the *Religion of a Literary Man* (1893). In 1899 he wrote *Rudyard Kipling*, a far from eulogistic study of Kipling's art and influence. The range and quality of his general criticism are well represented by *Retrospective Reviews* (2 vols., 1896); and a certain grace that is characteristic of him by *The Book-Bills of Narcissus* (1891), *Prose Fancies* (1st series, 1894; 2d series, 1896), and *Sleeping Beauty and Other Prose Fancies* (1900). In 1898 he visited the United States on a lecture tour, and afterward he lived in or near New York. Among his publications not cited above are: *My Lady's Sonnets* (1887); *Volumes in Folio* (1889); *George Meredith* (1890); *English Poems* (1892); *Robert Louis Stevenson and Other Poems* (1895); *The Quest of the Golden Girl*, a novel (1896), an adaptation of the *Rubaiyat* of Omar Khayyam; *Young Lives* (1899); *Travels in England* (1900); *The Life Romantic* (1900); *An Old Country House* (1902); *How to Get the Best Out of Books* (1904); *Romances of Old France* (1905); *Painted Shadows* (1907); *Little Dinners with the Sphinx* (1909); *The Highway to Happiness* (1912); *The Lonely Dancer and Other Poems* (1914); *The Silk Hat Soldier* (1915), war verse.

LEGAL PROCEEDINGS. In the most general sense, any proceedings, civil or criminal, instituted and carried on in a court of justice or before a judge of such a court acting in his official capacity. The expression, therefore, applies to every stage in the conduct of a suit, from the serving or filing of the original process to the rendering of a final judgment and the execution thereof, as well as to proceedings of a less formal character, as motions (in court or in chambers), orders upon motions, etc., and indeed to judicial business of every sort. In a more restricted sense, the expression is often employed by lawyers to denote proceedings in a court of common law, as distinguished from those carried on in a court of chancery, or equity, or in the court of Admiralty, or in the ecclesiastical courts. See COURT; PROCEDURE.

LEGAL REPRESENTATIVES. Those who, upon the death of a person, become entitled, whether as executors (where such were appointed by will of the deceased) or as administrators (where the deceased died intestate), to administer the decedent's personal estate. Where there are proper executors designated in the will, the personal estate vests in them at once upon the testator's death, but under modern practice the authority of the court of probate, exercised by the issue of letters testamentary to such executors, is requisite in order to enable them to act in all respects as legal representatives of the decedent. Administrators,

however, have no claim upon the estate and no right to exercise any authority with reference to it until qualified by letters of administration conferred upon them by the probate court. Where a will fails to appoint executors, or where the persons designated are no longer living or are ineligible, the court will, upon proper application, appoint an administrator "with the will annexed" (*cum testamento annexo*). The persons entitled to appointment as administrators are determined by statute. See ADMINISTRATION; ADMINISTRATOR; EXECUTOR; PERSONAL REPRESENTATIVE.

LEGAL RIGHTS. See RIGHTS, LEGAL.

LEGAL TENDER. In its broadest sense, an offer or attempt to perform a contract in accordance with the appropriate legal requirements. When thus used, the term includes an offer to perform by doing something, as well as an offer to perform by paying something. In the former case a legal tender, i.e., an offer to perform the contract at the agreed time and place, as in the case of a sale and delivery of a chattel, discharges the person making the tender from all contract liability, although the other party declines the tender. In the same way a legal tender of the amount due on a mortgage or a pledge, even though it be rejected by the creditor, will operate to discharge the property from the lien of the mortgage or pledge.

A tender of payment, however, does not discharge the debtor from his personal obligation. Only actual payment will do this. But a tender not accepted and kept good, i.e., held at the demand of the creditor, will save the debtor from interest accruing thereafter and from the costs of a suit for the debt. In order that a tender of payment be legal, it must be a proffer of money actually produced and accessible to the creditor unless the production be waived by him; the exact amount due must be offered or a sum tendered from which the creditor can take the exact amount, and it must be unconditional.

The term is also used to denote the kind of money that is legally tenderable in the payment of debts. This is regulated with considerable minuteness by modern statutes. In Great Britain Bank of England notes are a legal tender for any sum above £5. Gold coins of the Royal Mint, unless diminished in weight below the statutory standard, are a legal tender for a payment of any amount; its silver coins for an amount not exceeding 40 shillings; its bronze coins for an amount not exceeding one shilling. The crown, with the advice of the Privy Council, may by proclamation declare foreign or colonial coins legal tender. In the United States the various gold coins of the National Mint, the notes of the United States, ordinarily called greenbacks, and a specified class of United States Treasury notes are legal tender for debts of any amount. Silver dollars are a legal tender "for all debts, except where otherwise expressly stipulated in the contract"; while the other silver coins (the half dollar, quarter dollar, and dime) are a legal tender for an amount not exceeding \$10. Minor coins (the five-cent piece and the cent) are tenderable for an amount not exceeding 25 cents. Consult: 3 and 4 Wm. IV, c. 98; the Coinage Act, 1870, 33 and 34 Vict., c. 10; United States Constitution, Art. I, § 10; United States Revised Statutes, §§ 3584-3590, as amended; J. L. Laughlin, "Economic Effects of Legal Tender," in *Yale Review*, vol. x (New Haven, 1902); A. B. Hepburn, *History of Coin-*

age and Currency in the United States (New York, 1903); S. P. Breckenridge, *Legal Tender* (Chicago, 1903); A. R. Hunt, *Treatise on the Law of Tender* (St. Paul, Minn., 1903); J. C. Smith, *Legal Tender: Essays* (London, 1910); and authorities under CONTRACT.

LEGAL-TENDER CASES. A series of cases before the Supreme Court of the United States involving the question whether certain acts of Congress, declaring the notes of the United States lawful money and a legal tender in payment of all debts public and private within the United States, except duties on imports and interest on the public debt, were constitutional. The first case, which brought the question squarely before the court, was *Hepburn v. Griswold* (8 Wallace, 603), a case in which the Court of Errors of Kentucky had held the acts of Congress above mentioned unconstitutional. It was first argued at the December term, 1867, reargued at the December term, 1868, and decided November 27, 1869, by a divided court. Chief Justice Chase and Associate Justices Nelson, Clifford, Field, and Grier were for the affirmance of the decision of the court below, while Justices Miller, Swayne, and Davis dissented. In April, 1869, an Act was passed increasing the number of associate justices of the Supreme Court from seven to eight. Early in 1870 Justice Grier resigned, and Justices Bradley and Strong were appointed to the vacancies. After this reconstruction of the court a motion was made for the reargument of *Hepburn v. Griswold*; which was granted by a vote of five to four, and the constitutional question was again considered and decided in May, 1871. Again was the court divided, but this time a majority, consisting of Justices Miller, Swayne, Davis, Bradley, and Strong, upheld the constitutionality of the Act, while Chief Justice Chase and Justices Nelson, Clifford, and Field dissented. (*Legal-Tender Cases*, 12 Wallace, 457.)

All of the judges agreed that Congress had the power to direct issues of paper currency. The difference of opinion related solely to its power to make such currency a legal tender, especially for existing debts. The majority in *Hepburn v. Griswold*, who were the minority in the later cases, held that this power was neither specifically granted by the Constitution, nor was it necessary to the accomplishment of any granted power. Moreover, they deemed the statutes unconstitutional because they impaired the obligation of contracts and amounted to a taking of private property for public use without compensation. It was admitted by the minority in *Hepburn v. Griswold*, and the majority in the later cases, that the laws did impair the obligation of contracts made before their passage, but it was said, "While the Constitution forbids States to pass such laws, it does not forbid Congress." The Fifth Amendment, which forbids taking private property for public use without just compensation or due process of law, it was declared, had always been understood as referring only to a direct appropriation, and not to consequential injuries resulting from the exercise of lawful power. And, finally, it was held that the statutes were passed in the proper exercise of the power to borrow money and maintain the army and navy in time of war.

In 1878 Congress directed that the legal-tender notes of the United States which were redeemed, or received into the Treasury from any source, should be reissued and kept in circulation. As

the final decision in the legal-tender cases above referred to had been rested in part upon the necessity of the earlier legislation as a war measure, the validity of the Act of 1878 was assailed with much confidence. However, with but a single dissent (that of Justice Field), the court held that Congress has power to make United States notes a legal tender in the payment of private debts in time of peace as well as in time of war. "Congress," said the court, "has the power to issue the obligations of the United States in such form, and to impress upon them such qualities as currency for the purchase of merchandise and the payment of debts as accord with the usage of sovereign governments. The power, as incident to the power of borrowing money, and issuing bills or notes of the government for money borrowed, of impressing upon those bills or notes the quality of being a legal tender for the payment of private debts, was a power universally understood to belong to sovereignty in Europe and America at the time of the framing and adoption of the Constitution of the United States. The governments of Europe, acting through the monarch or the legislature, according to the distribution of powers under their respective constitutions, had and have as sovereign a power of issuing paper money as of stamping coin."

The foregoing decision has closed all judicial discussion, and declares the rule of law upon this point. Whether a national paper currency shall be a legal tender is now a question for the political forum only. Consult. *Legal Tender Case*, *Juilliard v. Greenman* (110 U. S., 421, 1884); Thayer, "Legal Tender," in *Harvard Law Review* (1887); George Bancroft, *A Plea for the Constitution* (New York, 1886); Miller, *Lectures on the Constitution of the United States* (ib., 1891).

LEGARDEUR DE SAINT-PIERRE, JACQUES. See SAINT-PIERRE, JACQUES LAGARDEUR DE.

LEGARÉ, le-gré', HUGH SWINTON (1789-1843). An American jurist and statesman, born in Charleston, S. C., of Huguenot stock, Jan. 2, 1789. He died in Boston, Mass., June 2, 1843. Though in youth of delicate health, he attended South Carolina College, then studied law for three years; visited Edinburgh, where he completed his education, and traveled on the Continent. Returning home, he devoted himself to planting for a time, was soon elected to the Legislature, and then began to practice law in Charleston. He was elected to the Legislature once more (1824-30), and was afterward made Attorney-General of the State, being at the same time editor of the *Southern Review*, which he helped found (1828-32), and to which he contributed learned articles. During the Nullification crisis he opposed extreme measures, although he was always in favor of States' rights. From 1832 to 1838 he served as chargé d'affaires at Brussels. On his return he was elected to Congress, where he served one term, winning reputation as a debater on the proslavery side. Opposition to the subtreasury scheme caused his defeat and drew him over to the Whigs. In 1841 he became Attorney-General under Tyler, and served until his sudden death, having also conducted the State Department after the retirement of Webster. He was a man of profound learning, especially in the civil law, and his essays on literary and general topics were equal to anything of the kind produced at the

time in America. His writings were edited by his sister, Mary S. L. Bullen, in two volumes (1846).

LEGASPI, MIGUEL LÓPEZ DE. See LÓPEZ DE LEGAZPI.

LEG'ATE (Lat. *legatus*, ambassador, deputy, lieutenant, governor, from *legare*, to send on a commission, bequeath). A title most commonly applied to the diplomatic and other representatives of the Pope outside of Rome. Legates are of three kinds: (1) *legati a latere* (from the side); (2) commissioners or nuncios, *legati missi*, *nuntii apostolici*, with a minor class of *internuntii*; (3) legates by virtue of their office, *legati nati*. The dignity of a legate *a latere* is the highest among legates, and has been confined to cardinals since the decree of Innocent IV (1243-54) on the subject. Legates *a latere* are either ordinary or extraordinary; the first commonly governed provinces within the Papal States; the second are commissioned to visit foreign courts for special purposes. The *legati missi*, or nuncios, correspond to the ambassadors or ministers maintained by secular states at foreign capitals. The dignity and jurisdiction of a *legatus natus* are permanently attached to a metropolitan see by papal concession; the Archbishop of Canterbury held this position up to the Reformation, and Cardinal Richelieu attempted to secure it for himself. Legates formerly exercised an immediate jurisdiction as representing the holy see; hence frequent conflicts with local episcopal authority arose. To quiet these conflicts, the Council of Trent (Sess xxiv, cap. 20) decreed that legates were not to presume on the strength of any faculties whatsoever to impede the bishops in matrimonial causes or in those of criminal clerks, nor to take proceedings unless recourse had been had to the bishop and he had neglected to act. Vienna, Madrid, Lisbon, Bavaria, Belgium, and Brazil have nuncios. A legate with the same powers but a lower rank is the *internuncio*, maintained in Argentina and Chile. An authority somewhat similar to the ancient legatine jurisdiction was granted by Pope Leo XIII to a permanent apostolic delegate for the United States (established in 1893) and to one for Canada (1899); and similar officials have been sent also to the Philippines and to Cuba to adjudicate the questions growing out of the Spanish-American War of 1898. Consult E. L. Taunton, *The Law of the Church* (St. Louis, 1906).

LEGA'TION. 1. An ambassador, minister, envoy, legate, or other diplomatic agent of a foreign power, together with his suite, or the persons associated with him in his official capacity. 2. The official residence of such a diplomatic agent in the country to which he is accredited, together with the compound or inclosure within which it is situated. By the fiction of extraterritoriality (q.v.) the residence of a foreign minister is deemed for many purposes to be under the jurisdiction of the power which he represents and thus exempt from the ordinary jurisdiction of the state to which he is accredited. It is accordingly entitled to immunity from the execution of compulsory legal process of the latter. A legation may, in some cases, serve as an asylum for political refugees, but never for ordinary criminals. See **ASYLUM**; **DIPLOMACY**; **INVOLABILITY**; **MINISTER**.

LEGATO, lá-gá'tó (It., tied). In music, a direction that the notes are to be played as if

they were bound or tied together, or in such a manner that the one note flows without break into the following one.

LEGAZPI, or **LEGASPI**, MIGUEL LÓPEZ DE. See LÓPEZ DE LEGAZPI, or LEGASPI, MIGUEL.

LEGEND, lě'jend or lě'jend (OF. *legende*, Fr. *légende*, from ML. *legenda*, story, from Lat. *legenda*, nom. pl. neut. of *legendus*, to be read, gerundive of *legere*, to read). In the technical language of folklore, a narrative relating to a sacred person or locality and connected with religious belief or worship. Legends were primarily lives of Christian saints, because these were included in the selections (*legenda*) to be read in public worship. (See **LESSON**.) In the early Church, on the anniversary of a martyr, it appears to have been usual to read the story of his passion. Later, readings from lives of the saints formed a part of monastic worship (office of nocturns). Different churches, according to local ideas and stories, enlarged the lives of their respective saints, so that in time it became necessary to gather and coördinate the material. As a result of this process, towards the end of the thirteenth century, Jacobus de Voragine (James of Varagium) composed the famous *Legenda Aurea*, or Golden Legend. The term "legend" there denoted the entire work, but subsequently it came to designate the story of any particular saint. The tendency of such narratives was towards a presentation continually more fanciful. Legends, at first brief and simple, became long and imaginative. Consequently they came to be regarded with suspicion, so that the word was finally taken to signify any narrative professing to be historical, but in reality of a traditional and imaginative character.

In regard to origins, the general principle is that a story primarily historical (though from the first often also semifabulous) becomes, in course of time, more and more imaginative through absorption of material from current literature or folklore, in such a manner that the actual occurrence is resolved into the popular ideal. This process has by no means ceased; as examples may be cited the accounts of modern Russian-Jewish rabbis, to whom are popularly ascribed wonderful qualities bestowed after the pattern of Talmudic authors. Thus, the personality of the founder of the fanatical sect of the Chasidim, Baal Shem (Israel Besht), who lived in the eighteenth century, has become obscured in the accounts of his admirers, who represent him as a miracle worker, predicted by prophets and encompassed with an aureole; the man himself seems to have been a quiet mystic. The unhistorical elements which have been incorporated in legends may be referred to several categories. For instance, a great influence has been exercised by the tendency to repeat types and events of the Old and New Testaments. A second class of legendary incidents arises from a confusion of fact and metaphor; e.g., inasmuch as the name Christopher signifies Christ-Bearer, the saint was represented as a giant carrying on his shoulders the infant Jesus. Yet a third class represents the survival of ideas and beliefs belonging to more ancient faiths, as in the (relatively late) story of the rescue by St. George of the daughter of a king of Libya, which preserves the tale of the dragon slayer Perseus.

A word must be said on the literary use of Christian legends. During the Middle Ages

their versification continued to be a favorite form of poetic composition. Rhymed accounts of Saints Eulalia and Alexis belong to the principal monuments of old French literature. In Germany legends were poetically treated in the thirteenth century by Hartmann von Aue, Rudolf von Ems, and Konrad von Würzburg. The Renaissance and the Protestant Reformation put an end to this literary interest, which, however, was renewed during the romantic revival of the eighteenth and the early part of the nineteenth century. Legend was then considered less as veritable history than as an expression of sentiment and folk thought.

From a primal application to Christian hagiology the legend has been extended to include histories belonging to other faiths. It is in the nature of things that every people should possess a multitude of traditional narratives, taken to be historical and explanatory of their usages and beliefs. Mohammedan saints also have their legends, which have not, however, found a place in the authorized worship. In dealing with the religion of ancient Greece it is usual to distinguish legends of heroes from myths concerning the gods, as if the former had more of an historical element, while the latter were more purely imaginative; but this distinction is by no means clear or well defined. Among American Indians the name of legend has been given to sacred histories which relate to personages honored in the cult, and which frequently supply information respecting the origin and migrations of the tribe. It is probable that similar legends, of a quasi-historical character, constitute a universal property of races in a primitive condition of culture.

Bibliography. For the manner in which legends became part of public worship, as well as for an account of Old English legends, consult Horstmann, *Altenglische Legenden* (Heilbronn, 1881). For remarks on classification and origin of legends, L. J. A. Maury, *Croyances et légendes du moyen âge* (Paris, 1896). For the literature of Christian lives of the saints and legends of the Virgin, consult authorities referred to under the corresponding titles. The *Legenda Aurea* of Jacobus de Voragine was printed in English translation by Oaxton (1484); recently reprinted by

Ellis (London, 1900). See **MARTYRLOGY**; **MYTHOLOGY**; **SAINT**.

LEGEND. In music, the title of compositions that are based on some legend of saints. But to-day the title is frequently given by composers to shorter instrumental compositions of an elegiac character which have no underlying programme whatever.

LÉGENDE DES SIÈCLES, lă'zhänd' dà sê-â'kl', La (Fr., The Legend of the Centuries). A collection of brilliant narrative poems by Victor Hugo (1859).

LEGENDE VON DER HEILIGEN ELISABETH, lă-gên'de fôn dêr hî'lî-gen ê-lê-zà-bêt. An oratorio by Liszt (q.v.), first produced in Budapest, Aug. 15, 1865; in the United States, Feb. 28, 1884 (Brooklyn).

LEGEND OF GOOD WOMEN. A poem by Chaucer, written probably in 1385. He intended to give the stories of 19 celebrated women of antiquity, but finished only nine. The plan was taken from Boccaccio's *De Claris Mulieribus*, but Chaucer evidently drew also from Ovid, Livy, Statius, Vergil, and a Latin translation of Plutarch's *Lives*. Traces of Dante and Guido delle Colonne can be seen. Tennyson's *Dream of Fair Women* was modeled on this poem.

LEGEND OF JUBAL, THE. The title of a collection of poems by George Eliot (1874).

LEGEND OF MONTROSE, A. A novel by Sir Walter Scott (1819).

LEGEND OF SLEEPY HOLLOW, THE. A tale by Washington Irving, in the *Sketch Book*. The tradition of the Headless Horseman, connected with the spot, is used by a rival for the hand of Katrina van Tassel to put a stop to the courtship of Ichabod Crane, the awkward schoolmaster.

LEGENDE, le-zhân'dr', ADRIEN MARIE (1752-1833). A French mathematician, born in Paris and educated in the Collège Mazarin. He early became professor of mathematics in the Ecole Militaire and later in the Ecole Normale at Paris. He was a member of the Academy and of the Bureau of Longitudes and in 1816 was appointed examiner for admission to the Ecole Polytechnique. In 1824, in an election at the Academy, he was deprived of his pension because he did not vote for the candidate of the government, and, as a result of this loss, he died in poverty. Legendre was one of the leaders in introducing the metric system and was associated with Prony in preparing the great centesimal trigonometric tables. He contributed extensively to the theory of attraction (from 1783) and introduced into the discussion of the attraction of spheroids the special cases of Laplace's coefficients which bear his name. He also wrote important memoirs (1787-88) on geodesy, introducing a method of treating the spherical triangle as plane, provided certain corrections are made with respect to the angles. The method of least squares (q.v.) was published in his *Nouvelles méthodes* mentioned below, although Gauss had already used it. The celebrated law of quadratic reciprocity (see **NUMBERS**), which Gauss called "the gem of arithmetic," appeared in a memoir of 1785, but the first proof was given in his *Théorie des nombres*. The most important of Legendre's works is the *Traité des fonctions elliptiques*, upon which he worked for 40 years. It is a tribute to his generosity that just as his work was appearing the labors of Abel and Jacobi became known and were at once recognized by him as superior

to his own. He even went so far as to embody them, with due credit, in his last volume. (See FUNCTION.) The work which had the greatest popularity, and which was a classic for a century, was his *Eléments de géométrie* (1794; 15th ed., 1881; Ger. trans. by Crelle, 6th ed., 1873; Eng. trans., 1860). The later editions of this work contain his proof of the irrationality of π and π^2 . His other works are: *Essai sur la théorie des nombres* (1798; 4th ed., 1900; Ger. trans. by Maser, 1886); *Nouvelle théorie des parallèles* (1803); *Nouvelles méthodes pour la détermination des orbites des comètes* (1805); *Exercices de calcul intégral* (1807; new ed., 3 vols., 1819); *Traité des fonctions elliptiques et intégrales Eulériennes* (3 vols., 1826-32). Consult J. B. Elie de Beaumont, "Memoir of Legendre," translated by C. A. Alexander, in *Smithsonian Institution, Annual Report*, 1867 (Washington, 1868).

LEGENDRE, LOUIS (1752-97). A French Revolutionist. Born at Versailles, he established himself in Paris as a butcher. When the Revolution broke out, his rude eloquence made him one of the popular leaders who led in the capture of the Bastille. He became a member of the Jacobin Club, one of the founders of the Cordeliers Club, and an enthusiastic partisan of Danton. A member of the Convention, he was sent by that body on missions to Lyons and to Seine-Inférieure. He was obliged to abandon Danton when the latter was arrested, and later he participated in the reaction that led to the fall of Robespierre, the suppression of the Jacobins, and the impeachment of Carrier. Finally he was elected President of the Convention and became a member of the Council of Ancients.

LEGENDRE, NAPOLEON (1841-1907). A Canadian poet and essayist. He was born at Nicolet, Province of Quebec, and was educated by the Jesuits in Montreal. He studied law, was called to the bar in 1865, and in 1876 entered the provincial civil service. He was one of the original fellows of the Royal Society of Canada (1872) and contributed many papers to its *Transactions*. He published: *Echos de Québec* (2 vols., 1876); *A mes enfants* (1876); *Les Perce-Neige* (1886), poems; *Mélanges* (1887); *Nos Écoles* (1890); *La langue française au Canada* (1892).

LEGER, le-zhà', LOUIS PAUL MARIE (1843-). A French writer and linguist, born at Toulouse. He was educated at Douai and Paris and early turned his attention to the study of Slavic languages and literatures. In 1864 he went to Bohemia, and this visit was followed by many others to that country, Hungary, Poland, and especially to Russia. After teaching at the Sorbonne he was at the Ecole Spéciale des Langues Orientales, where he became full professor in 1877. In 1885 he was appointed professor of the Slavic languages and literatures at the Collège de France. He was made a member of the Institute in 1900. Besides his contributions to the important journals of the day, he wrote such works as *Études slaves* (1875-80); *Nouvelles études slaves* (1880; 2d series, 1886); *Contes slaves* (1882); *Chronique dite de Nestor* (1884); *La Save, le Danube, et le Balkan* (1884); *La Bulgarie* (1885); *Histoire de l'Autriche-Hongrie* (1878, 1889); *Russes et Slaves* (1890-99); *La littérature russe* (1892); *Le monde slave* (2d ed., 1897-1902); *L'Évangéliste de Reims* (1899); *La mythologie slave* (1902);

Souvenirs d'un slavophile (1905); two art monographs, *Moscow* (1904) and *Prague* (1907); *Gogol* (1913); *Serbes, Croates, et Bulgares* (1913).

LEGERDEMAIN, ləj'ər-də-mān' (Fr., sleight of hand). The art of performing tricks of deception—in the narrower sense, with the hands alone; broadly, with any aid of physical appliances.

The arts of magic, seemingly as ancient as human intelligence, are of two general types: (1) forms such as necromancy, divination, sorcery, or enchantment, perhaps astrology, in which the magician works by means of spells, incantations, or of some occult science supposed to give him knowledge of superhuman agencies and power to direct them; (2) legerdemain and jugglery in which the magician displays his own skill at wonder working. Ordinarily, among primitive peoples, the magician—witch doctor, medicine man, or what not—is himself deceived by the usages of magic of the first type, receiving them as mysteries of his cult and implicitly relying upon their efficacy. Magic of the second type, however, is used and understood by him merely as a means of impressing his more ignorant fellowmen with a sense of his power; it is conscious deception. This distinction is significant in the history of magic and is maintained even in modern civilization; for, although many forms of the first type of magic are imitated by tricks of legerdemain, notoriously in the spiritualistic séance, there still persists credulity in occultism in connection with the frankest recognition of the natural causes of the deceptions of jugglery.

Legerdemain and jugglery are sometimes grouped under the title "natural magic," probably on the analogy of "natural philosophy," since so many of their deceptions are applications of simple principles of physics and chemistry; but the two terms are not precisely synonymous. Jugglery is the broader term, denoting not only tricks of deception, but performances with paraphernalia demanding great skill and dexterity, in which no deception is intended. Legerdemain, however, is confined simply to tricks of deception. The diverse development is perhaps illustrated in the jugglers of India and those of Japan. The performances of the former so often cited, such as the mango trick, the basket trick, and the snake-charming trick, are properly legerdemain, depending for their deception upon some type of substitution; whereas the feats of the Japanese are very largely feats of equilibration, as the balancing of objects upon various parts of the body, demanding great skill, but not, as a rule, designed to deceive.

In legerdemain proper the essential feature is generally an act of substitution, as when, e.g., the performer seems to discover eggs, money, and the like objects in places previously perceived to be empty. Often the substitution requires for its efficiency elaborate mechanical devices, though the most skillful thaumaturgists prefer to rely upon their own manual dexterity. The power of deceiving is almost invariably due to power of diverting the percipient's attention at a crucial moment—the moment of the substitution. In this even more than in celerity of movement lies the essence of the art. The psychological principles underlying the deception rest wholly upon the laws of attention. In proportion as attention is

intensified, its scope becomes narrowed; as, e.g., concentrated inspection of any object renders stimuli affecting the marginal regions of the field of vision practically invisible. It is, accordingly, the first duty of the performer to centre the percipient's attention as strongly as possible upon the object matter of the trick to be performed. Succeeding in this, he gains a practical control over the percipient's range of vision and has little difficulty in diverting it at the crucial moment. It may thus be said that the keenest scrutiny is the likeliest to fall victim to the trick.

The part of the legerdemainist himself, however, is one of great difficulty; for he must be able to discoördinate his actions and diversify his attention to a degree only attainable by long practice. His hands and eyes must be trained to work apart—the hands performing the substitution, eyes and bodily pose misleading the percipient. Similarly his attention must comprehend and direct many diverse details at once.

The origin of thaumaturgy is of remote antiquity. Savages the world over have developed cults and mysteries which transmit, with other lore, tricks of legerdemain from generation to generation. The Navaho Indians perform a trick with the cactus almost identical with the mango trick of India, and nearly all of the simpler performances are known to widely separated peoples. The wonder-workers of Egypt and Mesopotamia were anciently famous, and many of the miracles recorded indicate that the Roman priests utilized principles of hydrostatics and optics for the production of illusions. Jugglers were known among the Anglo-Saxons, but appear to have attained no great proficiency. Indeed, it was only with Robert Houdin (1805–71) that legerdemain became a matter of science. Houdin built many clever contrivances and wrote several books on the subject, never claiming to be a wonder-worker in a miraculous sense, but only a clever manipulator. The Herrmanns, Houdini, and Kellar have since advanced the art to a degree far in advance of any previously attained. On the other hand, many impostors have utilized legerdemain to produce "materializations" of spirits, clairvoyant readings, slate writings, and the like. Hypnotism has also been widely used by professional exhibitors—often fraudulently; and very many tricks which are merely exhibitions of known natural principles or feats of apparent strength, as the supporting of weights on the pelvic arch, have been passed as thaumaturgic phenomena.

LEGER (lɛʒ'ɛr) **LINES** (OF. *legier*, *leger*, Fr. *léger*, It. *leggiere*, light, from Lat. *levis*, light). In music, the name of the short lines above or below the staff, which are used to express those notes which lie beyond the five lines of the staff. The spaces between these auxiliary lines are called leger spaces. See MUSICAL NOTATION, *Clefs*.

LEGGE, JAMES (1815–97). A Scottish missionary and Sinologist, born at Huntley, Aberdeenshire. He was educated at the Aberdeen Grammar School and Aberdeen University, where he graduated in 1835, and proceeded to London, entering Highbury Theological School. Having been ordained, he was sent in 1839 by the London Missionary Society to the East as a missionary to the Chinese. Until 1842 he was stationed at Malacca, but when Hongkong became a British colony in that year he moved thither. From the first he was an earnest and industrious student of Chinese, giving his attention chiefly to the Chinese classics. His missionary labors, however, were not neglected, and during his years of service in that colony he baptized no fewer than 600 converts, besides acting as the pastor of the Union Church. In 1876 he became professor of Chinese language and literature at Oxford University, a chair which had been founded especially for him.

His greatest and most lasting work was his translation of the Chinese classics. Between 1861 and 1873 he issued at Hongkong eight volumes, containing the Chinese text, translation, and most elaborate and learned prolegomena, *The Four Books*, containing "The Analects of Confucius," "The Great Learning," "The Doctrine of the Mean," and *Mencius*; the *Shu King*, or "Book of History"; the *Shih King*, or "Book of Poetry"; and the *Ch'un Ch'un*, or "Spring and Autumn" (the only work ever written by Confucius), with Tso-chuan's *Commentary*. The remaining books of the series—the *Yih King*, or "Book of Changes", the *Li Ki*, or "Book of Rites"; the *Hiao King*, or "Book of Filial Piety"—were afterward published at Oxford, without the Chinese text, and are found in the "Sacred Books of the East Series," edited by Max Müller. He also prepared and issued for the use of general readers *The Four Books* without the Chinese text, and the critical notes. In 1886 he also prepared and issued the text and translation of *A Record of Buddhist Kingdoms* by the Chinese pilgrim Fa-Lien (399–414 A.D.), with an introduction and critical notes; and in 1891, in the "Sacred Books of the East Series," *The Texts of Taoism* (the Tao-teh-king, Chwang-tse, and the Kan-ying Pien) in two volumes. He also published a volume on *The Religions of China* (1881). He wrote *Notions of the Chinese Concerning God and Spirits and Confucianism in Relation to Christianity* (1877).

LEG'GETT, MORTIMER DORMER (1831–96). An American soldier, born in Ithaca, N. Y. He early removed to Ohio and there studied at first medicine and afterward law, which last he practiced with success. From 1855 to 1858 he was professor of pleading and practice in the Ohio College of Law and in 1858 became superintendent of schools at Zanesville. At the outbreak of the Civil War he helped raise the Seventy-eighth Ohio Volunteer Infantry, of

which, in January, 1862, he was commissioned colonel, and which he commanded at Fort Donelson, Shiloh, and Corinth. In November, 1862, he was appointed brigadier general of volunteers and participated in the Vicksburg campaign, during which he was wounded. Later he commanded the Third Division of the Seventh Army Corps on Sherman's march to the sea. He was brevetted major general of volunteers in July, 1864, and was commissioned major general a year later. He was appointed United States Commissioner of Patents in 1871 and held that position until 1881, when he resigned to resume his private practice.

LEGGETT, WILLIAM (1802-39). An American author, born in New York City. He was educated at Georgetown College, D. C., entered the navy in 1822 as midshipman, and served until 1826. During this time he had written a volume of poems entitled *Leisure Hours at Sea*, and after resigning from the navy he commenced his literary work as editor of the *Critic*, a weekly journal, which was afterward united with the New York *Mirror*. Several of his articles which appeared in the *Mirror* and other magazines he subsequently published in a volume with the title of *Tales by a Country Schoolmaster* (1835), which was followed by *Naval Stories*, published the same year. In 1829 he became one of the editors of the *Evening Post* and in connection with this work attracted attention by vigorously denouncing those who mobbed the Abolitionists in 1835 and by earnestly defending the right of free discussion. Retiring from the *Post* in 1836, he established the *Plaindealer*. He was appointed by President Van Buren diplomatic agent to Guatemala, but died suddenly at New Rochelle while preparing for his departure. He had many devoted friends, among whom was William C. Bryant, who wrote a highly eulogistic poetical tribute to his memory. Consult J. G. Wilson, *Bryant and his Friends* (New York, 1886).

LEG'HORN, lēg'hörn or lēg-örn' (It. *Livorno*, ML *Liburnum*, Lat. *Portus Hercules Liburni*, *Portus Labronis*). A city of Italy, in Tuscany, chief town of the Province of Leghorn (Map: Italy, C 3). The Province of Leghorn is the smallest in Italy, consisting only of the Circle (coextensive with the commune) of Leghorn and the Circle of Portoferraio, i.e., it consists of the city of Leghorn with its outlying district, the island of Elba, and a few smaller islands (Gorgona, Pianosa, Monte Cristo). The total area of the province is 133 square miles, its population (de facto) in 1901 was 123,877 and, in 1911, 135,765. The city of Leghorn is situated on the Mediterranean, 9 miles south of the mouth of the Arno and 12 miles by rail southwest of Pisa; by rail it is 62 miles west-southwest of Florence, 113 miles southeast of Genoa, and 208 miles northwest of Rome. It is the third largest commercial port in Italy (after Naples and Genoa) and is almost entirely modern. In 1551, it is said, the town had only 749 inhabitants. For an Italian city it is strikingly deficient in examples of Renaissance art. The city has broad, straight, well-paved streets, large public squares, and splendid boulevards. The main street, on which are all the principal shops, is the Via Vittorio Emanuele, running east-northeast from the harbor and crossing the broad Piazza Vittorio Emanuele, in which is an equestrian statue of King Victor Emmanuel II. In the Piazza Garibaldi

is a monument to the great patriot; in the Piazza Carlo Alberto are colossal statues of Ferdinand III and Leopold II, the last grand dukes of Tuscany; in the Piazza Cavour is a marble statue of the statesman; in the Piazza Micheli a statue of Ferdinand I, Grand Duke of Tuscany. Besides the seventeenth-century cathedral there are 23 churches (among them Evangelical, English, Greek, Armenian, Waldensian, Scottish), and a handsome synagogue founded in 1581. The most interesting public building is the royal castle. There are several good hotels and a number of sea-bathing establishments with cafés and terraces. Leghorn's popularity as a bathing resort is constantly growing, and during the season, from July 15 to September 15, many of the villas along the shore to the south are occupied by English and Americans. Electric cars connect the railway station with the bathing establishments and with the suburban summer resorts of Ardenza and Antignano. The new race track near Ardenza is one of the best in Italy. Montenero, 2½ miles from Ardenza, is a resort for pilgrims, having an image of the Madonna much esteemed by sailors. The water supply comes from the hills of Colognole, 13 miles away, and is stored in an immense reservoir. Educational institutions are the Royal Naval Academy, the Royal Commercial Marine Institute, a lyceum, a Gymnasium, and a public library with 71,200 volumes in 1913. Charitable institutions are two pesthouses, a great hospital (founded in 1622), an asylum for foundlings, and an orphan asylum. Leghorn is the seat of a bishop and of an American and other foreign consuls.

The inner harbor (Porto Vecchio or Mediceo) admits vessels of small draft only, the outer harbor (Porto Nuovo), added in 1854, is protected by a semicircular mole ⅝ of a mile long, with lighthouses at both ends. From them is to be had a comprehensive view of the city and of the islands of Elba, Gorgona, and Capraia. On a rocky island in the outer harbor is a lighthouse (Faro) erected in 1303. Numerous canals intersect the town, and a ship canal connects the harbor with the Arno. Leghorn has regular steamship communication with Genoa, Corsica, Malta, the Levant, Marseilles, and Hamburg. The tonnage entered and cleared in 1900 and 1904 was 2,532,000 and 4,226,000 respectively; in 1911, 5,108,172 (4607 vessels, of 2,557,937 tons, entered, and 4580 vessels, of 2,550,235 tons, cleared). The principal exports are cotton, wool, and raw silk to the Levant, other exports are olive oil, wine, candied fruit, borax and boracic acid, tartar, soap, hemp, hides, quicksilver, furniture, and marble. The principal imports are grain and petroleum from Russia via the Black Sea; other imports are spirits, sugar, tobacco, cotton, wool, hides, and coal. In 1911 imports were valued at 143,881,000 lire, and exports at 95,771,000 lire. The armored vessels of the Italian navy are built at the works of the Orlando Brothers. Among the manufactures are glass, porcelain, coral ornaments, and chemical products. There are copper, brass, and iron foundries. The de facto population of the commune in 1901 was 98,321 (of whom 79,342 dwelt in the city proper, and the remainder in the suburbs); in 1911, 105,315. Leghorn became important only after the decay of the neighboring city of Porto Pisano, the harbor of which is now entirely filled up. It came into the possession of Florence in 1421.

was fortified by Alessandro de' Medici, and was declared a free port (the first in the Mediterranean) by the Grand Duke Cosimo I. Under the Law of 1867 it ceased to be a free city. Consult Vivoli, *Annali di Livorno* (4 vols., Leghorn, 1842).

LEGIO FULMINATA. See LEGION, THE THUNDERING.

LEGION. See INFANTRY.

LEGION (Lat. *legio*, properly a levy, choice, from *legere*, to choose, select, Gk. *λέγειν*, *legein*, to choose). The tactical unit of the Roman army. In early Rome *legio* denoted the entire levy, the whole army, which consisted ipso facto of all the citizens, i.e., patricians, capable of bearing arms. Thus, it was an irregular force that, in time of need, could be summoned to combat by the chief. Romulus is said to have organized a force consisting of 3000 *milites*, or armed infantrymen, and 300 *celerēs*, or horsemen (knights; see EQUESTRIAN ORDER); these, continued the tradition, were furnished in equal numbers (1000 *milites* and 100 *celerēs*) by each of the three tribes, Ramnes, Tities, and Luceres, into which the citizens were divided, and commanded severally by the *tribunus militum* and the *tribunus celerum*. See ROME, the third paragraph under the caption *History of Rome during the Earliest or Regal Period*.

It was King Servius Tullius, however, according to the tradition of the ancients, who first organized the army on a substantial military basis. In accordance with the democratic reforms of the time, the warriors were not drawn exclusively from the patriciate; the lower classes also, or *proletarii*, were permitted to bear arms. The *iuniores*, or younger men, from 17 to 46, formed the backbone of the army and bore the brunt of actual fighting in the field; the *seniores*, elder men, from 46 to 60, defended the city and took the field only in times of pressing need. (See ROME, the last paragraph under the caption *History of Rome during the Earliest or Regal Period*.) They fought in the form of the *phalanx*, or solid body, without any regular division into battalions, except on the basis of age and rank described above; a system that was maintained until the beginning of the fourth century B.C., when a new reform is said to have been organized by Camillus (390 B.C.). This new system had for its basis the *legio*, or army corps, two of which formed the *exercitus consularis*, or consular army. Thus, the total levy for the year was now often four legions, two serving under each consul. The legion was commanded by six *tribuni militum*, always members of the nobility, who took turns, by the day or the month, in the actual command. Legions were always enrolled for a single year's campaign and dismissed at the end of the season. The warriors were compelled to furnish their own equipment, except that the *proletarii* were equipped by the state. With the gradual conquest of Italy, however, and the numerous wars with nations beyond the sea, this system of annual citizen soldiery became impossible, and war tended to become a profession.

The army, as organized on the legionary system of the Republic, was divided as follows: the legion consisted normally of 4200 infantry and 300 cavalry; the infantry body (aside from the *proletarii*) was divided into 30 maniples, and each manipulus was subdivided into two centuries, or "companies." But there was also a division according to age and experience. Each

legion had 1200 *hastati*, or younger men, forming the first line in battle, 1200 *principes*, men of riper years, and 600 *triarii*, or veterans; and this was the legion proper, as divided into maniples and centuries. They were armed with bronze helmets with plumes (*cassis*), leather cuirass (*lorica*), metal greaves (*ocreae*), a long semicylindrical shield (*scutum*), and a short, pointed, double-edged sword (*gladius*). The *hastati* and the *principes* carried also each two pila, or long, heavy javelins, while the *triarii* bore lighter lances. In addition to the above, each legion had 1200 *velites*, light-armed troops drawn from the *proletarii*, armed with leather helmet (*galea*), round shield (*parma*), and short sword (*gladius*). The 300 horsemen (*equites*) attached to the legion were divided into 10 *turmae* of 30 horse each, each *turma* under the command of three decurions. Each half of the manipulus was captained by a centurion and had its own standard, while the legion as a whole had its eagle (*aquila legionaria*; see EAGLE). A new reform in army organization was due to Gaius Marius at the end of the second century B.C. The *census*, or position according to social rank, wholly ceased to be regarded. The Italian allies of Rome were admitted to the legions. The class of *velites* was abolished, and the cavalry was no longer made up exclusively of Roman *equites*. The army was now a permanent body, serving for pay, 20 years was the usual term of service. An important change was effected also in the internal organization of the legion. Its tactical division was no longer the manipulus, but the cohort (*cohors*). The three lines were assimilated, and the legion was divided into 10 cohorts, each consisting of three maniples, or six centuries. At the same time the effective strength of the legion was increased, but during the civil wars the actual number of men varied with the exigencies and possibilities of the case. The normal strength of the cohort was soon raised to 600, making a legion of 6000 men, besides auxiliary troops and cavalry drawn from the barbarian subjects and allies of Rome. In battle the legion was arranged in two lines of five cohorts each; but Cæsar altered the formation to three lines, of four, three, and three cohorts respectively. The chief centurion of the *triarii*, or veterans, known as *primus pilus*, was the ranking officer of the legion, but the responsibility of command was vested in the *legatus legionis*, or lieutenant general, while the six *tribuni militum* remained a sort of honorary staff of young nobles, who used this irresponsible form of military service as a first step in their public career, but were actually rather a nuisance in the army.

When the battle of Actium (31 B.C.) left Octavius in sole control of the Roman world, there were remnants of 50 legions under his command. In 27 B.C. he effected a thorough reorganization of the Roman armies, reducing the total number of legions to 23, to which he added two new ones about 5 B.C. Under the Empire, when whole legions were annihilated in war, they were either newly recruited or the name was dropped. The number of legions, however, gradually increased. Claudius added a new one after his conquest of Britain; Nero created three more; Galba, one; and so on until under Septimius Severus there was a total of 33 legions, which remained the full number until the reign of Diocletian. Under the late

Empire the quota of men to the legion was reduced, but the number of legions was vastly increased. In the fourth century there were more than 175 legions in the field.

The legions of the Empire were distinguished by numbers and names. Examples are Cæsar's famous *Legio X*, *Legio VIII Augusta*, *Legio XII Fulminata* (see **LEGION**, **THE THUNDERING**), *Legio XV Apollinaris*. Titles were sometimes bestowed by the emperors, as special marks of honor, as *pia* (loyal), *vindex* (avenging). Sometimes they were derived from the name of the reigning emperor, as *Severiana*, *Antoniniana*, and often from the place of service, as *Italica*, *Macedonica*. On the legions of the Empire, consult Pfitzner, *Geschichte der römischen Kaiserlegionen* (Leipzig, 1881). On the legion in general, consult: Alfred von Domaszewski, in Mommsen-Marquardt, *Handbuch der römischen Altertümer*, vol. v (2d ed., Leipzig, 1884), the article "Exercitus," in William Smith, *A Dictionary of Greek and Roman Antiquities*, vol. i (3d ed., London, 1890); H. P. Judson, *Cæsar's Army* (Boston, 1894), the article "Exercitus," in Pauly-Wissowa, *Real-Encyclopædie der classischen Altertumswissenschaft*, vol. vi (Stuttgart, 1909); G. L. Cheesman, *The Auxilia of the Roman Imperial Army* (Oxford, 1914). See **ARMIES**, **Rome**.

LEGION, MEDAL OF HONOR. See **MEDAL OF HONOR** **LEGION**.

LEGION, THEBAN (Lat. *Legio Thebana*). A legion of Christians, said to have suffered martyrdom to a man under the Emperor Maximian (286-305). As the story goes there was a legion in the Roman army recruited in the Thebais, the region round Thebes in Egypt, led by Mauritius, and made up entirely of Christians. This legion, being brought to suppress a revolt in Gaul, the Emperor reviewed at Agaunum in Switzerland, and required to swear allegiance in the usual heathen manner. This they refused to do and were massacred to a man. The event, first recorded in writing in the fifth century, made so profound an impression that the name of the place was later changed into Saint-Maurice and a Benedictine monastery built there: the commander became St. Maurice, patron saint of Magdeburg and many other places, his lance became the ensign of the Burgundians, and his spear part of the investiture of the Burgundian kings. The arguments pro and con for this story are given in the *Acta Sanctorum* of the Bollandists under September 22.

LEGION, THE THUNDERING (Lat. *Legio Fulminata*). A legion of the Roman army (See **LEGION**, last paragraph). During the war waged by Marcus Aurelius (q.v.) with the Marcomanni (q.v.) (174 A.D.), his army, according to the narrative, being shut up in a mountainous defile, was reduced to great straits by want of water; but when a body of Christian soldiers prayed to the God of the Christians, not only was rain sent seasonably to relieve their thirst, but this rain was turned upon the enemy in the shape of a fearful thundershower, under cover of which the Romans attacked and utterly routed them. The legion to which these soldiers belonged was thence, according to one of the narrators, called the Thundering Legion. This legend has been the subject of much controversy; it is certain that the last-told circumstance at least is false, as the name Thundering Legion existed as early as the time of Augustus. The legion was so called, apparently, because its shields bore a

device representing the lightning. There would appear, nevertheless, to have been some foundation for the story told of Marcus Aurelius' army. The scene is represented on the column of Antoninus. The event is recorded by the pagan historian Dion Cassius (lxx, 8), who declares that the miracle was wrought by an Egyptian sorcerer, who prevailed on Mercury to aid the Romans, and by Capitolinus and Themistius, the latter of whom ascribes it to the prayers of Aurelius himself. It is appealed to by the nearly contemporary Tertullian, in his *Apology* (c. 5), and is circumstantially related by Eusebius, by Jerome, and Orosius.

LEGION OF HONOR. A French order of merit founded by Napoleon in 1802 and organized two years later. The distinction was conferred for meritorious conduct in military or civil life. The order comprised in the beginning 3665 chevaliers, 450 officers, 300 commanders, 105 grand officers, and a grand master, the last office being vested in Napoleon himself. All members at their initiation were required to pledge their support to the defense of the state and of the liberties achieved by the Revolution. The order experienced many alterations with the successive changes of dynasties in France. Its present constitution dates from the year 1872, when it was reorganized into five classes—chevaliers, officers, commanders, grand officers, and grand crosses. Stipends ranging from 250 francs for a chevalier to 3000 francs in the case of a grand cross are attached to these dignities. In 1892 the order numbered 43,851 members of all classes, and by Law of 1897 the maximum number of additional crosses to be distributed was fixed at 14,320. The emblem of the order is a five-rayed star of white enamel edged with gold, bearing on its obverse the image of the Republic with the inscription *République Française*, and on the reverse two flags with the motto *Honneur et Patrie*. It is surmounted by a wreath of oak and laurel and is suspended from a red ribbon. Originally the cross bore, instead of the emblem of the Republic, the portrait of Napoleon, and was surmounted by an Imperial crown. The order is also conferred on foreigners, and in some cases upon women. See **PLATE OF ORDERS**.

LEG IRONS. See **IRONS**.

LEGISLATION. The declaration, creation, alteration, or repeal of law, by the person or body to whom, by the constitution of a state, the authority has been committed. In primitive society legislation as a source of law has little or no place, custom and usage supplying whatever rules are found to be necessary for the regulation of the common affairs of the community. In such a society the deficiencies of customary law are often supplied by commands issued by the king or chief, sometimes with the assent of his warriors or nobles. In some communities this power became vested in a special class of learned persons, as, e.g., the Druids in Britain and the Brehons in Ireland. The disinclination to innovate upon the customary law, however, and the comparatively few legislative needs of a primitive society made the enactment of new law a rare occurrence. It is doubtful if the great ancient codes contained much new law, for it would have been a rash act for a lawgiver to presume to innovate upon the immemorial customs of the race. But with the growth of a more highly developed society and the advance of civilization new sources of

law made their appearance. Legislation, says Sir Henry Maine, is one of the three agencies by which law is brought into harmony with society, the other two being legal fiction and equity. Bentham, however, using the term in a wider sense, includes both legal fiction and equity under the head of legislation, on the ground that all three processes involve the making of new law, the difference being only one of method. The term is more commonly employed in the special sense of the enactment or amendment of law by the direct action of the sovereign, or of a special organ of the state to which the legislative power is committed. As thus employed, it excludes the process of adjudication, which is, however disguised, one of the most prolific sources of law. Indeed, the complete separation of the two processes is a device of modern society, legislative and judicial functions not being distinguished in the earlier stages of legal development.

Legislation played an important rôle in the legal development of the Greek republics of antiquity, especially in the popular assemblies of Athens and Sparta, but it attained its highest development in the Republican era of Rome. Here its chief organs were the *comitia*, or popular assembly of free citizens, and the Senate, whose decrees (*senatus consulta*) have been the model of succeeding ages. During the Imperial period the legislative function gradually passed out of the hands of the Senate into those of the Emperor, whose judgments and decrees (known variously as constitutions, decrees, rescripts, and mandates) had the force of law without further sanction. The responses of the jurists (*responsa prudentum*), to whom the actual decision of doubtful cases was referred, likewise derived their authority from their confirmation by the Emperor. See *COMITIA*; *LEX*.

During the mediæval period legislation throughout Europe was a function of the prince, sometimes assisted by a council, but never controlled by it. Towards the close of the Middle Ages, however, the rise of Parliament in England led to the withdrawal of a considerable part of the legislative power hitherto exercised by the King, and its assumption by Parliament. (See *LEGISLATURE*.) Elsewhere this power was retained by the princes until the nineteenth century, during the course of which period representative legislative bodies were provided in all those countries which established constitutional systems of government. According to the modern idea of the term, legislation has reference to the formal enactments of those representative bodies especially created for purposes of law-making. But besides the body of legislation emanating from the legislatures there is another important body of law peculiar to modern states which goes by the name of organic or fundamental legislation, and is embodied in the various constitutions of government. This form of legislation differs from the preceding class both as to source and status. In the first place, it emanates usually from constituent assemblies, or, as they are popularly called in America, constitutional conventions; and, secondly, it takes precedence in authority over the body of law which emanates from the legislatures. There is still a third form of lawmaking, commonly known as direct legislation, which results from the application of the principle of the referendum (q.v.). According to this method legislative projects are initiated by the legislature or

by popular petition and submitted directly to the electorate for its approval or disapproval, the validity of the statute being conditioned upon its acceptance by a majority of the voters at the polls. This method of legislation is resorted to quite generally in Switzerland, both in the federal and cantonal governments, as well as in some of the American States. Recently constitutional amendments have been enacted in many States of the Union for the establishment of a system of popular initiative in legislation, such as exists in Switzerland. There are undoubtedly signs of a growing tendency in the United States to accord a more general recognition to this method of legislation as a means of avoiding certain evils of the representative system.

Another, and common, form of legislation is that enacted by municipal and quasi-municipal corporations (cities, counties, townships, etc.). This class of legislation deals with matters chiefly of local concern, but sometimes also of interest to the state at large, and is enacted as a result of special grant from the legislature. In Europe, as a rule, there is a more general grant of legislative power to the localities. In the municipalities the organ of legislation is a representative council, sometimes consisting of a single chamber, sometimes of two, the right of veto usually being given to the mayor. In the counties it is usually a small representative board of commissioners or supervisors; in the townships it is sometimes a popular assembly of the voters, sometimes a smaller body of selectmen, trustees, or commissioners.

Statutory legislation in the United States is from the standpoint of its territorial application classified as *general*, when it applies to the State as a whole, and *special*, when its application is restricted to a particular locality. The abuses which have arisen from the practice of special legislation have recently led to the incorporation of provisions in many State constitutions restricting or prohibiting this form of legislation, but these provisions have not in general proved effective, being evaded by a system of municipal classification. See *MUNICIPALITY*.

Viewed from the standpoint of time of operation, legislation may be either *prospective* or *retroactive*. Retroactive legislation unless for curative purposes is generally regarded with disfavor. When it imposes a criminal liability or tends to impair the obligation of contracts, it is expressly forbidden by the Constitution of the United States. Looked at from its content, legislation may be either *substantive* or *remedial*. Legislation of the former character creates and defines individual rights; of the latter, provides remedies and affords protection.

The methods and processes of legislation roughly fall into two general classes: (1) the cabinet method, and (2) the congressional or committee method. According to the first method, which prevails everywhere in Europe except in Switzerland and Germany, and even to a limited extent in Germany, the great mass of legislation is formulated and initiated by responsible ministers who have seats in the Legislature and may at the same time be members of that body. Whether members or not, the ministers take part in the debates advocating the adoption of the public measures which they wish to have enacted into law, defending

them from the attacks of the opposition and finally resigning when defeated upon any important measure advocated by them. (See CABINET.) According to the second method there is no ministry to formulate and expedite the passage of bills, but each individual member introduces such public or private bills as he chooses and relies upon the aid of his colleagues to secure their passage. This is the method in vogue in the Congress of the United States and in the legislatures of the several States. (See UNITED STATES, *Government*.) Here the chief agencies for expediting legislation are the standing committees of the Congress or Legislature, which play only a subordinate part in the European systems. Apart from this divergence in the method of initiating and expediting the enactment of public measures, there is a substantial consensus among the leading nations of the world as to the general principles of legislative organization and procedure. The constitutions of many States prescribe detailed rules in regard to the form in which projects of legislation shall be cast, their reference to committees, the number of readings through which they shall pass, the keeping of a journal, the recording of the ayes and nays in certain cases, reconsideration of the executive veto, and sometimes such matters as amendments, divisions, discipline, and petitions.

LEGISLATION, LABOR. See LABOR LEGISLATION.

LEGISLATURE. That body of citizens in any state or nation, or part thereof, which is specifically empowered to make, alter, and repeal the laws. In some countries, however, the power of the legislature is more or less restricted by what is known as the constitution, or organic law, of those countries. In ancient systems of government, legislatures, in the modern sense, were practically unknown, though in Athens there was an assembly known as the *Ecclesia*, and in Rome there were various councils, which exercised many of the functions which belong to a modern legislature. In the later Roman Empire the chief source of legislation was the Emperor. In the Germanic tribes there were councils, which all freemen could attend, and these survived for a long time in some cases, as e.g., the Witenagemot (q.v.) among the Anglo-Saxons. Likewise the origin of the Spanish Cortes has been traced to the early Middle Ages, but in general, legislative power ultimately rested during the Middle Ages in the King or the feudal superior. In the Holy Roman Empire, the Imperial Diet possessed a shadow of legislative authority. Of the medie-

val legislatures, the English Parliament is of the most importance, because it was the only one to attain a complete development. It developed out of the Saxon Witenagemot and its successor the Norman Royal Council. Until the thirteenth century, however, it represented only the higher nobility and clergy and possessed little or no independent authority. During the reign of Henry III members from the counties and towns representing the gentry and the burghers were admitted, and in the struggles which followed over the arbitrary exactions of the King, Parliament, as the new body now came to be called, gained increasing power and finally took over from the King the greater part of the legislative authority hitherto exercised by him. It first asserted the right to raise taxes, then to specify the purposes for which they should be expended, then to inquire into the abuses of the administration and impeach the King's responsible ministers for misconduct. Next it asserted the right to share with the King the lawmaking power, and to give its resolutions precedence in authority over royal ordinances, and finally it succeeded in establishing its right to freedom from interference from the royal authority, together with the power of determining the qualifications and elections of its own members.

In the English dominions in America legislatures modeled upon the Parliament of the mother country were early established in every colony. At the time of the adoption of the national Constitution these bodies were bicameral in form in all the States except Georgia and Pennsylvania, the Lower House everywhere being an exclusively popular body. From the first there was a clear-cut distinction between legislative, executive, and judicial powers, and the early constitutions almost without exception expressly required that each set of functions should be exercised by a separate and independent organ of government. The only legislative power left to the Governor was the right to veto bills and recommend the enactment of laws which seemed to him wise and needful.

At the end of the eighteenth century the political reformers on the European continent looked to the institutions of England for their inspiration, so that during the course of the nineteenth century most of the countries of continental Europe adopted written constitutions of government providing for legislative bodies, partially representative at least, and vested with the greater part of the legislative power and often modeled closely upon the English Parliament. In some of the continental states, particularly France, Germany, and Italy, the chief executive still has a large ordinance power which is not only used to fill in the details of legislative acts, but even to supplement them in some cases. Such ordinances, however, are always subject to alteration or repeal by the legislative body. So far as the general principles of legislative organization and procedure are concerned, it may be said that the European and American states have pretty nearly reached a uniform practice. In all the countries of America and Europe where legislative bodies exist, except in some of the Balkan and Central American states, the bicameral system has been adopted as having substantial advantages over the old three-chambered bodies of Estates of the Realm on the one hand, and the single-chambered legislatures on the other. There is also

substantial agreement that the lower houses shall be popular bodies and consequently vested with the exclusive right to initiate financial and revenue measures. With this exception the two houses everywhere enjoy substantial equality of powers in legislation except in Great Britain, where, by a recent Act of Parliament (the Parliament Act, Aug. 18, 1911), the House of Lords was wholly deprived of its power to reject or amend a money bill and, as to all other measures passed by the House of Commons, was restricted to a suspensive veto, it being provided that such measures, if passed by the Commons in three successive sessions, shall become law, notwithstanding their rejection or amendment by the Lords, provided that at least two years have elapsed from the introduction of a bill to its third passage by the House of Commons. It is a general principle that the upper houses shall also be vested with certain administrative or judicial functions, such as the trial of impeachments preferred by the lower houses, the ratification of treaties, the confirmation of appointments to office, the issue of administrative regulations, etc. Similar distinctions in favor of the upper houses exist in the case of the local legislatures of the United States.

The principle of representation upon which the popular chambers rest is essentially the same almost everywhere, namely, apportionment according to the population, often with some regard to geographical division, and choice by district ticket, rather than the apportionment according to classes of voters and choice by general ticket. A striking exception to the principle of apportionment strictly according to population is afforded by the State of Connecticut. The ratio of representation varies greatly. In the Congress of the United States it is one representative to every 212,407 inhabitants, in the German Empire one to every 131,000, in Great Britain and Ireland (on an average) one to every 63,000, in France one to every 100,000, in Mexico one to every 40,000, and in Switzerland one to every 20,000. There is a great diversity with respect to the principles of representation in the upper houses of the legislatures. In general, the representation is of classes or of territorial divisions. In the United States, France, Switzerland, Mexico, and Brazil, the Upper House represents the individual States or the larger administrative units. In all of these except France the principle is equality of representation without respect to size or population of the area represented. In Great Britain, Spain, Portugal, Italy, Austria, and Hungary the principle of class representation is largely employed. Germany has as a part of its legislature a body, known as the Bundesrat, which, though in one sense an upper house, at the same time resembles a meeting of diplomatic representatives of the several states of the Empire.

The source from which the legislatures proceed is now substantially the same everywhere in the case of the lower houses, namely, universal manhood suffrage. To this rule there are exceptions, as in Australia, New Zealand, Finland, Norway, Iceland, and a dozen American States, where women possess the parliamentary or legislative franchise equally with men; in Italy, where a complex system of qualification (education, tax, rent) prevails; in Great Britain, where there is a household lodger franchise;

and in the Netherlands, where the payment of a direct tax is required. So far as the upper houses are concerned, there is considerable variety in the source from which they proceed. In France the Upper House is chosen by indirect election, in the United States (since 1913), Mexico, the Commonwealth of Australia, and Brazil it is chosen by direct election; in Germany and Switzerland it is appointed by the local governments. The British House of Lords consists of peers of the blood royal, English bishops, English peers (hereditary and created by the sovereign), Scotch representative peers (elected for duration of Parliament), and Irish representative peers (elected for life). The constitution of the Austrian Herrenhaus and of the Hungarian Table of Magnates is in the main very similar to that of the British House of Lords. The composition of the Prussian Herrenhaus is somewhat more complex than that of the Austrian; included in its members are representatives of the large cities and of the universities. The Senate in Italy is composed of princes of the royal house and of an unlimited number of peers, nominated by the King for life. The members of the Senate of the Dominion of Canada are appointed for life by the Governor-General. Among the commonwealths of the American Union the source of both houses is popular election.

The qualifications for members of the lower houses do not now differ greatly in the various modern states of the world. In general they are male sex, mature age, sometimes 21 years, although it is 25 in the United States, France, Germany, Spain, and Prussia, and 30 in Italy. citizenship, and residence in the state and sometimes in the district from which the member is chosen. The usual disqualifications are conviction of crime, bankruptcy, pauperism, and the holding of incompatible office at the same time. For eligibility to the upper houses there is usually a higher age qualification, the average being about 30, although it is 35 in Brazil, and 40 in France and Italy. In Europe appointed members of the Upper House are usually required to be selected from certain professional, learned, or noble classes. Among the States of the American Union the qualifications for membership in both Houses are the same, usually mature age and citizenship.

There is substantial agreement throughout the United States and Europe as to the rights and privileges of legislative members. These are the right of each House to judge of the elections and qualifications of its own members; freedom from arrest during the session, except for treason or other high crimes, or unless the member is caught in the act of committing a crime; and freedom of debate without responsibility to any power except the chamber for words spoken or votes cast. There is not yet unanimity of opinion on the question of whether members of the Legislature should receive compensation. In the United States, Mexico, Brazil, and France the practice exists of granting compensation to members of both Houses, and in Great Britain, Switzerland, Belgium, and Prussia to members of the Lower House. In Germany, Italy, and Spain members receive no compensation. In the American commonwealths the practice is to grant a small salary or per diem allowance together with mileage (q.v.).

The tenure of legislative members varies greatly. In the upper chambers of the European

legislatures it is generally for life or long periods of time, although in France it is nine years, and in Switzerland and Germany it depends upon the will of the local governments. As to the lower houses the tenures are usually for short periods of time, ranging from three years in Switzerland to five in Great Britain. In the United States it is six years for the Upper House and two for the Lower; in Mexico it is four for the Upper House and two for the Lower; in Brazil it is nine for the Upper and three for the Lower. Frequent provision is made for a partial renewal of the upper houses. Among the individual States of the American Union the most common provision is a four-year tenure for the Senates and two years for the lower houses. In some States, however, annual elections of members of the Legislature are still held. Relative to the powers of the Legislature over its own assembling, opening, adjournment, prorogation, and dissolution, it may be stated as a general rule that in the American republics and in the commonwealths of the United States this right belongs to the legislatures themselves, subject to certain provisions in the constitutions relative to the times of meeting and the length of the session. Most States have thus restricted the length of the legislative session to periods varying from 40 to 90 days. In the European legislatures, on the other hand, the more common rule is that these are prerogatives of the head of the state. So far as internal discipline, and procedure are concerned, a general rule is that each House shall be left to its own judgment subject to a few limitations prescribed by the constitutions relative to publicity of procedure, the infliction of punishment on refractory members, and the organization of the chamber. There is a substantial agreement that a quorum for the transaction of business should be a majority of the legal number of members. In some states this is regulated by statute, and in others it is made a constitutional principle. This rule, however, is departed from in the case of the British Parliament and the German Bundesrat, in both of which cases the presence of a comparatively small number of members is sufficient to transact business.

So far as the frequency of legislative sessions is concerned, it may be stated as a general rule that national legislatures assemble annually. This is required by the constitutions of the United States and France, while the demands of a complex and increasing civilization make it practically necessary everywhere. In the United States, however, the popular distrust of the State Legislature has led to the general adoption of the system of biennial sessions and in one State (Alabama) of quadrennial sessions. At the present time (1915) only seven States adhere to the old practice of annual sessions.

LEGISLATIVE MANAGEMENT IN INDUSTRY. See MANAGEMENT, LEGISLATIVE.

LEGITIM, lej'tim (Fr. *légitime*, from Lat. *legitimus*, lawful), or BAIEN'S PART. In Scots law, the legal provision which a child is entitled to out of the movable or personal estate of the deceased father. In Scotland, as formerly by the English common law, a father is not allowed wholly to disinherit his children. If a wife and children survive, the movable estate is divided into three equal parts, one of which is preserved to the children. If only children survive, and not the wife, then half the personal estate is legitim, the other half being called "dead's part" and being devisable by the father at his pleasure. Though a father may in his lifetime, without any check from his children, squander his property, still he is not allowed, by will or otherwise, to make gifts so as to lessen the fund to which the children are entitled. The legitim is claimable by all the children who survive the father, but not by the issue of those children who have predeceased. It is immaterial what the age of the child may be and whether married or not. Children claiming legitim must, however, give credit for any provision or advance made by the father out of his movable estate in his lifetime. All the children, though of different marriages, share equally in the legitim. The principle of the legitim does not now exist at the common law, but it obtains in Louisiana and in all the modern States whose legal systems are derived from that of the civil law. See INFAMOUS TESTAMENT.

LEGITIMACY. In law, the status of a child who is born in lawful wedlock. Any child born during wedlock is presumed to be legitimate, but this presumption may be rebutted by positive proof that the husband and wife had not cohabited for a time which would completely negative any possibility of the former being the father of the child. The old common-law rule was that the child was conclusively presumed to be legitimate unless the husband was "beyond the seas" for over nine months previous to its birth, but that rule has been modified as above stated. At common law the subsequent marriage of the parents did not have the effect of legitimizing children previously born to them, and such is still the law in England; but in civil-law countries (including Scotland, Quebec, and Louisiana), and now by statute in most of the United States, a child born out of wedlock is legitimized by the subsequent marriage of its parents, in which case it has the same status in law as a child born in wedlock.

As the only legal disabilities under which an illegitimate person rests are his inability to inherit land and, as next of kin, to administer the estate of a deceased parent or to share therein under statutes of distribution, the question of one's legitimacy is rarely raised, except when he asserts a claim to real or personal estate under such circumstances or when some one claims under or through him. Since 1858, in England, by virtue of the Legitimacy Declaration Act (21 and 22 Vict., c. 93), any natural-born subject, whose domicile is England or Ireland, or who claims any real or personal estate situate in England, may by direct proceedings, instituted by him for that purpose in the Divorce and Matrimonial Court, have the

question of his legitimacy tried and judicially determined. In the United States the old practice still generally obtains. See BASTARD; HEIR; ILLEGITIMACY; LEGITIMATION.

LEGITIMATION (from ML. *legitimare*, to make legitimate, from Lat. *legitimus*, lawful). The act of conferring the status of legitimacy on a person born a bastard. This may be effected by adoption, by act of parliament or legislature, or by the subsequent marriage of the father and mother of the illegitimate offspring, called legitimation *per subsequens matrimonium*. This effect, however, can only be produced provided at the time of the birth the parents might have been married, or there was no obstacle to their then marrying, if so inclined, as, e.g., if they were both unmarried, and there was no impediment. Sometimes it has happened that the father, A, or mother, B, after the child's birth, marries a third person and has children, and after the dissolution of the marriage A and B marry. In this perplexing case the courts have held that the intervening marriage with a third party does not prevent the bastard child, born before that event, from being legitimated by the subsequent marriage of A and B. But it has not been settled what are the mutual rights of the children of the two marriages in such circumstances, though it appears that the legitimate-born children cannot be displaced by the legitimated bastard. The doctrine of legitimation *per subsequens matrimonium* obtains in Scotland and in the legal systems of the Continent which are derived from the civil law, but is not recognized in England or Ireland, having been solemnly repudiated by the famous statute of Merton, and the maxim prevails there, "Once a bastard, always a bastard." This harsh rule of the common law still prevails in a few of the United States, but in most the civil-law rule has been adopted. The rule is the same where the parents were not really married, though they both bona fide believed themselves to be married. Consult "Legitimation by Subsequent Marriage," in *Journal of Society of Comparative Legislation*, vol. vi (N. S., London, 1906).

LEGITIMISTS (Fr. *légitimiste*, from Lat. *legitimus*, legal, from *lex*, law), THE. In France, after 1830, the party that upheld the claims of the elder line of Bourbons against the younger or Orleanist line. Charles X, who was deposed in 1830, belonged to the Bourbons, while Louis Philippe, who succeeded him, belonged to the house of Orléans. The death of the Count de Chambord, the last of the Bourbon line, in 1883, ended the dispute by leaving the Count de Paris, grandson of Louis Philippe, sole heir to the claims of both branches of the Bourbon family. The name to-day is applied to a believer in hereditary monarchy as opposed to parliamentary rule.

LEGLER, leg'ler, HENRY EDUARD (1861-). An American librarian. Born at Palermo, Italy, he was educated in Switzerland and in the United States. He served as a member of the Wisconsin State Assembly in 1889, as secretary of the Milwaukee, Wis., School Board from 1890 to 1904, and as secretary of the Wisconsin Library Commission in 1904-09. In 1909 he became librarian of the Chicago Public Library, and in 1912-13 he was president of the American Library Association. He is author of *Chevalier Henry de Tonty* (1896); *A Moses of*

the Mormons (1897); *Leading Events of Wisconsin History* (1897); *James Gates Percival* (1901); *Early Wisconsin Imprints* (1903); *Poe's Raven: Its Origin and Genesis* (1907); *Of Much Love and Some Knowledge of Books* (1912).

LEGNAGO, là-nyà'gò. A city in the Province of Verona, Italy, 33 miles by rail southeast of the city of Verona, on the Adige (Map: Italy, F 2). It has a technical school, a city library, and two theatres. The country is fertile though swampy, and Legnago is an important market for rice and other grain, wine, potatoes, and flax. In 1796 it was captured by the French, and the old fortifications were razed under Napoleon in 1801. In 1815 the Austrians, to defend the passage of the Adige, re fortified Legnago, making it one of the fortresses of the famous Quadrilateral. Pop. (commune), 1881, 14,358, 1901, 14,529; 1906, 17,000.

LEGNANO, là-nyà'nò. A town 16 miles northwest of Milan, Italy, on the river Olona. There are cotton and silk factories. Pop., 1901 (commune), 12,002; 1911, 24,364. It is famous for the victory of Milan and the allied Lombard cities over the Emperor Frederick Barbarossa (q.v.) in 1176. In the year 1876, the seven-hundredth anniversary of the battle, a monument was erected on the battlefield.

LE GOFFIC, le gô'fèk', CHARLES HENRI (1863-). A Breton poet, novelist, and critic, born at Lannion. The traditions and customs of Brittany have been depicted by him in a striking manner, on much the same lines as his contemporary Le Braz (q.v.). He became a Chevalier of the Legion of Honor and was three times a laureate of the French Academy. His literary career opened with a volume of verse, *Amour breton* (1889), followed by *Le pardon de la reine Anne* (1892). In 1913 his *Poésies complètes* began to appear. His other works include: *Le crucifié de Kérault* (1892); *Passé l'amour* (1895); *Le pays* (1897); *Sur la côte* (1897); *Morgane* (1898); *L'Erreur de Florence* (1904); *Les bonnets rouges* (1906); *L'Âme bretonne* (1902-08); *Passions celtiques* (1908); *La double confession* (1909); *Fêtes et coutumes populaires* (1911). Le Goffic's critical writing is found in *Nouveau traité de versification française* (1890, 5th ed., 1910), with E. Thieulin; and *Les romans d'aujourd'hui* (1890). In collaboration with Gabriel Vicaire he wrote the drama *Le sortilège* (1900).

LEGOUIS, le-gôo'è', EMILE (1861-). A French literary critic. He was born at Honfleur (Calvados), was educated at the universities of Caen and Paris, and after teaching in various provincial institutions, including 19 years as lecturer and professor at the University of Lyons, he was appointed to the chair of English language and literature at the Sorbonne (1904). In 1912-13 he visited America as exchange professor at Harvard and while here lectured at various other universities. His works include: *Le général Michel Beaupuy* (1891); *La jeunesse de William Wordsworth* (1896); *Pages choisies des grands écrivains, Shakespeare* (1899); *Morceaux choisis de littérature anglaise* (1905); edition of the *Jocelyn* of Lamartine and *Pages choisies d'Angellier* (both 1906); *Dans les sentiers de la renaissance anglaise* (1907); introduction to the French edition of the *Canterbury Tales* (1908); *Chaucer*, in the series "Écrivains étrangers" (1910); *Défense de la poésie française à l'usage des lec-*

teurs anglais (1912); "William Wordsworth," in the *Cambridge History of English Literature*, vol. xii (New York, 1914).

LEGOUVÉ, le-goo'vâ', ERNEST (1807-1903). A French dramatist, essayist, and academician, son of the poet Jean Baptiste Legouvé. His mother died in 1810, and his father soon had to be put in a lunatic asylum, but the orphan had plenty of money and was well educated. In 1829 he won an academic prize for a poem on the discovery of printing; but he first made his mark 20 years later (1849) by the drama *Adrienne Lecouvreur*, written in collaboration with Scribe (q.v.), as were also *Les contes de la reine de Navarre* (1850), *Bataille des dames* (1851), *Les doigts de fée* (1858). His dramas written independently of Scribe are insignificant, save for *Médée*, rather than play which Rachel paid 5000 francs, though Ristori achieved success with it in an Italian translation. Legouvé's dramatic works were collected (1887-90). He wrote also on education, on the social position of women, and on *L'Art de la lecture* (1877, 1881), in which he was an adept. In 1881 Legouvé was made director of studies in the normal school for girls at Sèvres and in 1887 a Commander in the Legion of Honor. Towards the end of his life Legouvé was known for his studies on the character and needs of women and children in France. *La femme en France au XIX^{ème} siècle* (1864) was reissued, much enlarged, in 1878. *Messieurs les enfants* appeared in 1868; then came his *Conférences parisiennes* (1872); *Nos filles et nos fils* (1877); and *Une éducation de jeune fille* (1884)—all very influential in changing French methods of education. In 1886-87 Legouvé published his autobiography, *Soixante ans de souvenirs*. He was always fond of physical training, which he urged as important to France, and was himself a skillful fencer and pistol shot. He died March 14, 1903.

LEGOUVÉ, JEAN BAPTISTE (1764-1812). A French poet and dramatist, born in Paris. His first play, *La mort d'Abel*, was produced in 1792 and was followed by *Epicharis* (1793), *Quintus Fabius* (1795), *Étécle* (1799), and *La mort de Henri IV* (1806), the only play he wrote which was well received. In general his dramatic works lack movement and interest. His poem *Le mérite des femmes* (1801) was very popular; it went rapidly through 40 editions. Legouvé was elected to the Institute in 1798.

LEGRAIN, le-grân', GEORGES ALBERT (1865-). A French Egyptologist, born in Paris. There he received his education, studying in the Ecole des Beaux-Arts under Gérôme and in the Collège de France under Maspero. In 1892 he became a member of the Institut Français d'Archéologie Orientale at Cairo, and of the museum of that city he was appointed Inspecteur-dessinateur in 1894. In 1897 Legrain became a member of the Institut Egyptien; in 1908 he was made a Chevalier of the Legion of Honor. While working on the reconstruction of the great temple of Ammon at Karnak, of which he had been placed in charge in 1895, he had the good fortune in 1904 to discover 800 statues of stone and 17,000 of bronze which had been buried in one place. Legrain's numerous publications include: *Le livre des transformations*; *Catalogue du musée de Cairo*; *Repertoire général de logue et onomastique du musée de Cairo*; *Les temples de Karnak*; *Louqsor*; *Légendes et*

chansons populaires; *La statuette funéraire de Pathmos* (1904); *Notes prises à Karnak* (1905); *Comment doit-on établir une généalogie égyptienne* (1906); *La grande stèle de Toutankhamanou à Karnak* (1907); *Sur une stèle de Senousrit IV* (1908).

LEGRAND, le-grân', LOUIS DÉSIRÉ (1842-). A French legal scholar and diplomat, born at Valenciennes. From 1882 to 1895 he was Minister Plenipotentiary at The Hague. He became a Councillor of State and an Officer of the Legion of Honor and was decorated by Holland. He wrote: *Du divorce et de la séparation de corps* (1865); *Sénac de Meilhan et l'indépendance de Hainaut et du Cambrésis* (1868); *Le mariage et les mœurs en France* (1879), crowned by the French Academy and the Academy of Moral and Political Science; *La révolution française en Hollande: La république batave* (1895); *L'Idée de patrie* (1897); *Précis de procédure civile usuelle et pratique* (1897; new enlarged ed., 1904).

LEGRAND DU SAULLE, le-grân' du sôl, HENRI (1830-86). A French alienist. He was born at Dijon, studied medicine there, and was interne at Rouen and at Charenton, was associate editor of the *Gazette des Hôpitaux* (1854-62), and in 1862 became doctor of medicine with a thesis *De la monomanie incendiaire*. He was an associate of Lasègne at the prefecture of police, Paris; was physician at the Salpêtrière (1877) and chief physician of the special infirmary for the insane at the prefecture of police, Paris (1883). He was long editor of the *Annales médico-psychologiques*. His principal works were: *La folie devant les tribunaux* (1864), an essay on *Le délire des persécutions* (1871); *Etude médico-légale sur les épileptiques* (1877); *Traité de médecine légale* (2d ed., 1885).

LEGRENZI, là-grên'tsé, GIOVANNI (c.1625-90). An Italian composer, born at Clusone, near Bergamo. After having studied under Pallavicino he became organist at Bergamo and, as *maestro di cappella* to the Duke of Ferrara, produced his first opera, *Achille in Sciro*, in 1663. The next year he went to Venice, where he was elected director of the Conservatory de' Mendicanti (1672), and in 1685 became *maestro di cappella* at Saint Mark's. In the latter capacity he enlarged the orchestra and introduced a number of innovations. He was one of the first to write trios for two violins and violoncello, and his operas (18 in all) are marked by a freer use of melody and a more coherent instrumentation than had been common before his time. In addition to his operas and instrumental compositions, he wrote considerable sacred music. He died in Venice.

LEGROS, le-grô', ALPHONSE (1837-1911). A French painter, etcher, and sculptor. He was born at Dijon, studied at the School of Fine Arts there and in Paris under Lecoq de Boisbaudran. He first exhibited a portrait of his father (1857, Tours Gallery), which caused him to be classed among the so-called Realists. Two years afterward his "Angelus," owned by Seymour Haden, excited further attention, and in 1861 his "Ex Voto" (Dijon Museum) aroused a storm of criticism. In 1863 he removed to London, where he became professor of etching in South Kensington schools and in 1876 was appointed Slade professor of fine arts at University College, London, to succeed E. J. Poynter. By his teaching and lofty example he

strongly influenced English art. His earlier period is marked by a primitive but picturesque realism; his later works are more simple and dignified, and in spirit nearly approach the old masters. Legros was extraordinarily versatile and prolific. His etchings are vigorously executed, with much restrained force, dramatic power, and grotesque humor. His innumerable pen and pencil drawings and his etchings and his medal work are widely known, and in his later years he gained fame as a sculptor. His subjects, beside portraits, are largely religious, or else illustrate the life of beggars, vagabonds, and the common people. His painting "Public Penance" (1868) is in the Luxembourg, which also possesses "The Dead Christ" (1868), a landscape, and the portrait of Gambetta. Among other important examples are: "Woman Praying" (1888, Tate Gallery, London); "Young Woman Walking beside a River" (1889, Alençon Gallery); "On the Edge of the Woods" (Metropolitan Museum, New York). Among Legros's best-known sculptures are "The Mask of Miss Swainson," in the South Kensington Museum, and the monumental fountain at Welbeck Abbey. His etchings include "The Triumph of Death," a remarkable allegorical series; "The Death of St. Francis"; "Procession through the Vaults of Medard," and "The Dying Vagabond." His portraits, such as those of Burne-Jones, Huxley, and Browning, are also notable.

LEGROS, PIERRE The name of two French sculptors.—**PIERRE THE ELDER** (1629-1714) was born at Chartres and studied in Paris under Sarrazin. He was chosen member of the French Academy in 1666 and appointed professor in 1702. Many of his statues and decorative works, which he modeled for Versailles, still exist. They are in the exaggerated baroque style of the period.

His son and pupil **PIERRE** (1666-1719) was born in Paris. He also studied at Rome, where he resided for many years and where most of his works are to be found. There are large religious groups by him in the Turin Cathedral, and in the church of St. John Lateran and St. Peter's in Rome, and several busts in the Louvre. They show artistic talent, but very little taste.

LEGUÍA, Iá-goo'yá, AUGUSTO B. (1863-). A Peruvian statesman, born in Lambayeque. He was educated in Valparaíso, Chile, and upon his return entered business in Lima. He served with distinction as a private in the Chilean-Peruvian War. After the war, he entered employment of the New York Life Insurance Company and soon became the general manager for Peru, Ecuador, and Bolivia. Later he organized and directed La Sud Americana Insurance Company in Peru and managed the British Sugar Company, Ltd. In 1903 he entered political life, accepting the Ministry of Finance, in which he introduced many fiscal improvements, especially that of the collection of the taxes through a private corporation. His measures greatly increased the public revenues. In 1908 he was elected President of Peru. Although much criticised by his own as well as by the opposition party, he maintained a firm control of the situation, governing with justice. His administration was progressive and peaceful. Education was encouraged, boundary disputes with Brazil and Bolivia were settled, the national defense was improved, and wireless communication was established between Lima

and Iquitos. At the end of his term in 1912 he went to London, where he thereafter resided.

LEGUME, lē'ūm or lē-gūm' (Fr. *légume*, from Lat. *legumen*, bean, from *legere*, to gather). A dry, dehiscent fruit, consisting of one carpel, and dehiscing (opening) by splitting down both sides, as in the pea, bean, etc. It is characteristic of the Leguminosæ, or pulse family, and is commonly spoken of simply as a pod. See **FRUIT**.

LEGU'MIN (from Lat. *legumen*, bean). A vegetable protein of the globulin group, found mainly in the seeds of many plants, including the leguminous plants, such as peas, beans, and lentils. Its exact nature is not known. Ritt-hausen found legumin from peas and field beans to contain the elements in the following proportions: carbon, 51.5 per cent; hydrogen, 7 per cent; nitrogen, 17.1 per cent; sulphur, 0.4 per cent; and oxygen, 24 per cent. Osborne found: carbon, 52.1 per cent; hydrogen, 7 per cent; nitrogen, 18 per cent; sulphur, 0.4 per cent; and oxygen, 22.5 per cent. Legumin may best be prepared by freeing finely ground peas of fat with the aid of naphtha, then extracting with a 10 to 20 per cent aqueous solution of common salt; the extract is filtered, precipitated with ammonium sulphate, the precipitate is again dissolved in a 10 per cent solution of common salt, and the salt is removed from the solution by dialysis, whereupon the legumin separates out almost pure, the final purification is effected by washing with water and alcohol. Legumin is insoluble in water, but soluble in very weak acids and alkalies, it is not coagulated by heat. It resembles the casein of mammalian milk, with which it was considered identical by Liebig and others, and was therefore called vegetable casein. It contains less carbon and more nitrogen, however, than true casein. Upon treatment with sulphuric acid, legumin gives leucine, tyrosine, and glutamic and aspartic acids. It is closely related to conglutin, a substance found in the seeds of cereals. Consult Osborne, *The Vegetable Proteins* (New York, 1909).

LEGU'MINOSÆ (Neo-Lat. nom. pl., from Lat. *legumen*, bean). A great family of dicotyledonous plants, containing about 12,000 species. It is far the largest family of the Archichlamydeæ, and with one exception (Compositæ) the largest family of angiosperms. In fact, it comprises approximately one-tenth of all angiosperms. The outstanding feature of the family is the legume, which is a pod developed by a single carpel and characterized by the fact that it splits into two pieces or valves, as in the case of peas and beans. The Leguminosæ overlap the Rosacæ (q.v.), the *Mimosa* tribe having many of the features of the latter family. The outlying features of the Rosacæ are regular flowers and several carpels, while the outlying features of the Leguminosæ are irregular flowers and a single carpel. In the *Mimosa* tribe of Leguminosæ, however, there is a combination of the regular flowers of the Rosacæ and the single carpel of Leguminosæ. This indicates that the legume, rather than the irregularity of the flowers, determines a member of Leguminosæ. The irregularity of the family is shown by the corolla and is very characteristic, consisting in what is called a papilionaceous (butterfly-like) corolla. The common sweet pea suggests the type of irregularity. The uppermost petal, called the standard, is the largest,

USEFUL LEGUMES

1. VETCH (*Vicia villosa*).
2. GARDEN PEA (*Pisum sativum*).
3. STRING BEAN (*Phaseolus vulgaris*).

4. PEANUT (*Arachis hypogaea*).
5. COWPEA (*Vigna catjang*).
6. LIMA BEAN (*Phaseolus lunatus*).

and encloses the others in the bud; the two lateral petals form the so-called wings; while the two lower petals unite to form the characteristic keel, which usually incloses the stamens and pistil. The stamens are quite characteristic, usually being ten in number, and united into one set or two sets (9 and 1). Occasionally they are free from one another, and rarely they are five in number. The three tribes of the family are very well marked.

1. *Papilionoideæ*. This tribe, much the largest, is characterized by its distinctly papilionaceous flowers. It includes a host of familiar forms, the most representative in American flora being *Baptisia* (false indigo), *Crotalaria* (rattlebox), *Lupinus* (lupin), *Trifolium* (clover), *Psoralea*, *Amorpha*, *Petalostemum* (prairie clover), *Robinia* (locust), *Astragalus* (milk vetch), *Desmodium* (tick trefoil), *Lespedeza* (bush clover), *Vicia* (vetch), and *Lathyrus* (everlasting pea). Among the more common and best-known forms naturalized from Europe, in addition to peas (*Pisum*) and beans (*Phaseolus*), are *Genista* (whin), *Cytisus* (broom), *Ulex* (gorse), *Melilotus* (sweet clover), and *Medicago* (alfalfa).

2. *Casalpinioidæ*. This tribe is characterized by its regular or imperfectly papilionaceous corolla, presenting a condition distinctly intermediate between the two other tribes. Even when the corolla is imperfectly papilionaceous, it can be distinguished from the preceding tribe by the fact that the upper petal is inclosed by the others in the bud, rather than the reverse. The common representatives are *Gymnocladus* (Kentucky coffee tree), *Gleditsia* (honey locust), *Cassia* (senna), and *Cercis* (redbud).

3. *Mimosoideæ*. This tribe is characterized by its regular corolla, which is valvate in the bud, that is, the petals do not overlap one another. It is the group of sensitive plants, chiefly characteristic of the southwestern arid regions of North America. The representative genera are *Mimosa* and *Acacia*.

A very notable feature of the Leguminosæ is the presence of root tubercles which are inhabited by nitrogen-fixing bacteria. Certain soil bacteria enter the young root hairs, grow and multiply, and work gradually into the cortex, where as they increase they stimulate the rootlet to multiply and enlarge the cortical cells, so that a local swelling, or tubercle, is formed. The largest of these scarcely exceeds the size of a hazelnut, and most are smaller than a pea, or even a grain of wheat. The bacteria inhabiting these tubercles can use the free nitrogen in their manufacture of protein. By means of their favorable situation, many of the bacteria become excessively enlarged. The leguminous host sooner or later gets the better of the parasites, and consumes these fat bacteria (bacteroids). In consequence of this peculiar relation between leguminous plants and nitrogen-fixing bacteria, leguminous crops, as clover and alfalfa, can be grown in soils poor in nitrates, and if the crop is plowed under, the soil is enriched in nitrogen at the expense of the air. For this reason leguminous plants are the most useful in the so-called rotation of crops.

LEHAR, lē'hār, FRANZ (1870-). An Austrian composer, born at Komorn (Hungary). Having completed his musical education at the Prague Conservatory, he began his career as concert master of the Elberfeld Opera. From 1890 to 1902 he was bandmaster of various

Austrian regiments. He then became conductor of the Theater an der Wien. The lukewarm reception of his first serious opera, *Kukushka* (1896), caused him to withdraw from the field of composition for some years. Meanwhile he discovered his truly remarkable talent for light opera, and his first attempts in this field, *Wiener Frauen* and *Der Rastelbinder*, both produced in 1902, proved emphatic successes. These were followed two years later by the equally successful *Die Juaheirat* and *Der Gottergatte*. On Dec. 30, 1905, he scored his greatest success, when *Die lustige Witwe* (The Merry Widow) had its initial performance in Vienna. Immediately the work made the rounds of all the stages throughout the civilized world, arousing the wildest enthusiasm everywhere and incidentally making the composer a millionaire. This was followed by other successful works, *Mitslav der Moderne* (1906), *Der Mann mit den drei Frauen* (1908), *Das Fürstenkind* and *Der Graf von Luxemburg* (1909), *Zigeunerliebe* (1910), *Die ideale Frau* (1912), *Endlich allein* and *Le roi des Montagnes* (1914). In the early part (1914-15) of the European War he was taken prisoner by the Russians.

LEHI. A city in Utah Co., Utah, about 30 miles south of Salt Lake City, on the Denver and Rio Grande and the San Pedro, Los Angeles, and Salt Lake railroads, and on two canals (Map: Utah, C 2). The surrounding region is adapted to irrigated farming, fruit growing, and sugar raising, and there are roller mills, a canning factory, and a large sugar refinery. The water works are owned by the city. Pop., 1900, 2719; 1910, 2964.

LEHIGH, lē'hi. A river of eastern Pennsylvania. It rises in the southwestern part of Pike County, flows southwest to White Haven in Luzerne County, then southeast to Allentown, Lehigh County, where it turns northeast and enters the Delaware at Easton, after a course of about 120 miles (Map: Pennsylvania, L 6). It is followed for the greater part of its course by the Lehigh Valley Railroad and passes through a region rich in anthracite coal and iron, for which it is an important outlet. By means of locks and dams it has been opened for slack-water navigation 84 miles from its mouth.

LEHIGHTON, lē'ht-tūn. A borough in Carbon Co., Pa., 86 miles by rail north by west of Philadelphia, on the Lehigh River, on the Lehigh Coal and Navigation Canal, and on the Lehigh Valley and the Central of New Jersey railroads (Map: Pennsylvania, K 5). Among the important industries are silk and lace mills, a meat-packing house, shirt factory, automatic-press works, car shops, stoneworks, foundries, etc. The fair grounds of the County Industrial Society are here, and there are two beautiful parks. Pop., 1900, 4629; 1910, 5316.

LEHIGH (lē'hi) **UNIVERSITY**. An unsectarian institution of higher learning at South Bethlehem, Pa., founded in 1865 by Judge Ass Packer (q.v.), of Mauch Chunk, with a gift of \$500,000 and 115 acres of land, and incorporated in 1866. By his will Judge Packer, who died in 1879, endowed the university with \$1,500,000 and the library with \$500,000. The object of Judge Packer was primarily to afford the young men of the Lehigh Valley a complete technical education for the professions represented in the development of the peculiar resources of the region. The university is organized in two departments: the department of

arts and sciences, comprising a classical course and business administration and scientific courses; and the department of technology, with highly developed courses in civil, mechanical, metallurgical, mining, and electrical and chemical engineering, electrometallurgy, and chemistry, leading to the corresponding engineering degrees. Graduate courses are offered in both departments, conferring the master's degree in art and science, and attendance at the summer schools forms part of the required work in the engineering courses. The college buildings, 17 in number, include Packer Hall, the Packer Memorial Church, well-equipped laboratories for chemistry and metallurgy, physics and electricity and steam engineering, the Sayre Astronomical Observatory, the John Fritz Engineering and Testing Laboratory, the Coke Mining Laboratory, a modern gymnasium, and the "Pittsburgh" (the gift of Charles L. Taylor, of Pittsburgh, Pa.), a large concrete stadium, Brown Memorial Hall (the student clubhouse), student commons or dining hall, and two dormitory buildings. The productive funds in 1913-14 amounted to \$1,314,000 and the annual income to \$260,638. The university had in 1914 an attendance of 672 students, a faculty of 75 instructors, and a library of 133,000 volumes. The president in 1914 was Henry S. Drinker, LL.D.

LEHMANN, lä'mán, ALFRED GEORG LUDVIG (1858-). A Danish psychologist and psychophysicist, born in Copenhagen. He took the degree of Ph.D. in 1884 at the University of Copenhagen, where, after study in Leipzig under W. Wundt, he became (1890) docent and (1910) professor, and where he founded a psychophysical laboratory. He wrote: *Hovedlove for det menneskelige Følelsesliv* (1892), for which the Society of the Sciences awarded him a gold medal; *Overtro og Trolddom* (4 vols., 1893-96; trans. into German); his main work, *De sjælelige Tilstandes legemlige Ytringer* (3 vols., 1898; Ger. trans., 1899-1905; continuation in German, *Elemente der Psychodynamik*); *Psychologische Methodik* (1905); *Grundzüge der Psychophysikologie* (1912); *Pædagogisk Psychologi* (1913).

LEHMANN, FREDERICK WILLIAM (1853-). An American lawyer. He was born in Prussia, graduated from Tabor College, Iowa, in 1873, and was admitted to the bar in 1873. He then practiced law at Nebraska City, Neb., until 1876, then at Des Moines, Iowa, until 1890, and thereafter at St. Louis, Mo., where he was a member of the firms of Boyle, Priest, and Lehmann (1895-1905) and Lehmann and Lehmann (1905-10). He was Solicitor-General of the United States in 1910-12 and represented the government at the Mexican Peace Conference at Niagara Falls, N. Y., in 1914. He served as president of the American Bar Association in 1908-09.

LEHMANN, lä'mán', HENRI (1814-82). A French historical and portrait painter, born at Kiel, Schleswig. He was a pupil of his father, Leo Lehmann, and of Ingres in Paris, where he opened a studio in 1847, after having become naturalized. He received many medals and was a member of the Institute and professor at the Ecole des Beaux-Arts. His work is of unequal merit. Much is dry and academic, but the best is pure in line and graceful in form. Among the best of his canvases are: "Jephtha's Daughter" (1836); "Grief of the Oceanides" (1850); "Prometheus"; "Erigone's Dream";

"Venus Anadyomene"; "Adoration of Magi and Shepherds" (1855, Rheims Museum); "Marriage of Tobias" (1866); mural paintings in the chapels of the church of St. Merry, on the ceiling of the Great Hall in the Palais de Justice, and in the Throne Hall, Luxembourg Palace. He painted many well-characterized portraits of celebrated contemporaries—Liszt, Ingres, and Edmond About, among others.

LEHMANN, lä'mán, JOHANNES EDVARD (1862-). A Danish theologian and Church historian, born in Copenhagen. In 1890 he won the gold medal of the University of Copenhagen, where, after studies in Lund, Germany, Holland, England, and Paris, he took the degree of Ph.D. (1896), and where he became docent in 1900. In 1910 he was appointed professor of religious history and religious philosophy at the University of Berlin and was made honorary doctor of theology by Leyden. In 1913 he became professor at Lund. He exerted great influence through his lectures and many books, the most important of which are: *Zarathustra* (2 vols., 1899-1902), treating of the old faith of the Persians; *Mystik i Hedenskab og Kristendom* (1904; Ger. trans., 1907); *Om Bibelen at læse og lære* (1906); *Buddha* (1907); *Opdragelse til Arbejde* (1910; Ger. trans., 1913); *Almuvel og Eventyr* (1910); *Teatrbuch zur Religionsgeschichte* (1912); *Hvorledes skal jeg undervise?* (1912); *Barnelærdom og Ynglingsliv* (1913). He edited and partly wrote P. D. C. de la Saussaye's *Lehrbuch der Religionsgeschichte* (4th ed., 1912), the most important book on the subject.

LEHMANN, lä'mán, KARL BERNHARD (1858-). A German physician. He was born in Zurich, was educated at the University of Zurich, and in 1881 became assistant in the physiological institute there. In 1883 he took a similar post in Munich and in 1887 went to Würzburg as assistant professor of hygiene, taking charge of the hygienic institute. In 1894 he became professor. Among his hygienic studies are a large number (beginning 1886) on gases, on the metals (copper, zinc, tin, nickel, chromates), on flour and bread (1894-1904), on cotton (1907), on tobacco and its use (1909-13), and on coffee (1912). He also published *Methode praktischer Hygiene* (2d ed., 1901; Eng. version by Crookes, 1893), and *Atlas und Grundriss der Bakteriologie* (1897; 5th ed., 1911), with R. O. Neumann.

LEHMANN, LILLI (1848-). An eminent German dramatic soprano, born in Würzburg. Her first lessons were from her mother, who was a harp player and prima donna under Spohr at Cassel. After singing small parts on the stage she made her début in Berlin as a light soprano in Meyerbeer's *Das Feldlager in Schlesien* in 1870 and became so successful that she was appointed Imperial chamber singer in 1876, in which year she sang the bird music in *Siegfried* and took the part of one of the Rhine daughters in the Nibelungen trilogy at Bayreuth. She sang in London in 1884 and came to New York, where she was engaged as principal soprano at the Metropolitan Opera House from 1885 to 1890. It was there that, together with Fischer, Alvary, Brandt, and Seidl, she helped accomplish the final triumph of Wagner's music. After her return to Germany she appeared as a Lieder singer, proving herself the equal of the greatest artists in that field also. Occasionally she appeared as guest on the oper-

atic stage; but for long the German opera houses were closed to her because she had remained in America beyond the leave granted her by the Berlin Opera. At last, however, through the personal intervention of the Emperor, the ban was removed. In 1901 she not only organized but also managed the famous Mozart Festivals in Salzburg. In 1888 she was married to the tenor Paul Kalisch. Her voice, of superb quality and volume, gained for her the reputation of being not only one of the greatest Wagnerian singers of her day, but also an ideal interpreter of Mozart. She was unsurpassed in the rôles of Brünhilde and Isolde. Consult: L. Andro, *Lilli Lehmann* (Berlin, 1907); Lilli Lehmann, *Mein Weg* (Leipzig, 1913; Eng. trans. by Alice B. Seligmann, *My Path through Life*, New York, 1914).

LEHMANN, lä'män, LIZA (Mrs. HERBERT BEDFORD) (1862-). An English concert vocalist and composer, born in London. Her father, Rudolph Lehmann, was a well-known artist, and her mother (daughter of Robert Chambers, cofounder of *Chambers's Journal*) was a composer, writing under the pseudonym of A. L. Liza Lehmann, studied voice culture under Randegger (London) and Raunkilde (Rome), and composition under Freudenberg (Wiesbaden) and Hamish MacCunn (London). Her début as a vocalist was at the London Monday Popular Concerts on Nov. 23, 1885; she afterward met with remarkable success throughout Great Britain and Germany. In 1894 she married Herbert Bedford (a composer of merit) and retired from concert work. Her most successful work is the song cycle *In a Persian Garden*, the words, taken from the *Rubaiyat* of Omar Khayyam, consisting of a connected group of solos and part songs. Other cycles are Tennyson's *In Memoriam*, *The Daisy Chain*, *Songs of Love and Spring*, *Nonsense Songs*, *Songs of Good Luck*. None of her later cycles has had the vogue of the *Persian Garden*. She also wrote two operas, *Sergeant Brue* (1904) and *The Vicar of Wakefield* (1906). In 1910 she made a most successful tour of the United States with her two cycles *In a Persian Garden* and *Nonsense Songs*. Her work is marked by a refinement of sentiment which betrays strongly the influence of Schumann.

LEHMANN, MAX (1845-). A German historian, born in Berlin and educated at Königsberg, Bonn, and Berlin. In 1879 he began to teach in the Berlin Military Academy, in 1887 was made a member of the Prussian Academy, and a year later went to Marburg as professor of history. In 1892 he was appointed to a like chair at Leipzig and in 1893 became professor of mediæval and modern history at Göttingen. He wrote: *Das Aufgebot zur Heerfahrt Ottos II. nach Italien* (1869); *Der Krieg von 1870 bis zur Einschliessung von Metz* (1873); *Knesebeck und Schön: Beiträge zur Geschichte der Freiheitskriege* (1875); *Stein, Scharnhorst und Schön* (1877); *Scharnhorst* (1886-87), which won a prize; *Friedrich der Grosse* (1894); *Freiherr von Stein* (1902-05), which won the Wedekind prize; *Historische Aufsätze und Reden* (1911); *Die Erhebung von 1813* (1913).

LEHMANN, OTTO (1855-). A German physicist; born in Constance and educated at Strassburg. From 1876 to 1883 he taught in the Gymnasium at Mülhausen and then in schools of technology at Aix (until 1888) and, after a year at Dresden, at Karlsruhe. Besides

contributions to German technical periodicals and to Meyer's *Konversations-Lexikon*, he wrote: *Physikalische Technik* (1885); *Molekularphysik* (1888-89); *Krystallanalyse* (1891); *Elektrizität und Licht* (1895); *Versuchsergebnisse und Erklärungsversuche* (1899); *Flüssige Krystalle und die Theorie des Lebens* (1906; 2d ed., 1908); *Die scheinbar lebenden Krystalle* (1907); *Die wichtigsten Begriffe und Gesetze der Physik* (1907); *Die Kristallisations-Mikroskop* (1910). He revised Frick's *Physikalische Technik* (7th ed., 1902-04) and Müller's *Grundriss der Physik* (1896).

LEHMANN, PETER MARTIN ORLA (1810-70). A Danish lawyer and politician, born and educated in Copenhagen. He early entered politics, became editor of *Kjøbenhavnsposten* (1835), and founded *Fædrelandet* (1839) as organ of the opposition. An enthusiastic friend of freedom, he worked for the national-liberal ideas, founded the Society for the Freedom of the Press (1839), started the Schleswig movement, and worked for the political and economic interests of the farmers. In 1848 he became Minister in the "March Ministry," later Governor, in 1851 an influential member of the Folketing, and in 1854 member of the Landsting. After 1860 he urged the government to take a strong stand against Prussia, and in 1861 Hall, to satisfy public demand, had to take him into his ministry. He was an enthusiastic adherent of "Scandinavisme," the aim of which was the political and cultural unity of the three Scandinavian countries. He wrote *Om Aarsagerne til Danmarks Ulykke* (1864; 8 editions; Eng. trans.). H. Hage and C. Ploug published his collected works (4 vols., 1872-74).

LEHMANN, RUDOLPH CHAMBERS (1856-). An English journalist, lawyer, and politician, born near Sheffield. He graduated at Trinity College, Cambridge, became a barrister of the Inner Temple in 1880, and took a prominent part in Liberal politics. From 1890 he was a member of the staff of *Punch* and in 1901 was editor of the *London Daily News*. He published a volume on rowing (in the *Isthmian Library*, vol. iv, 1897), and in 1896-97 acted as head coach to the Harvard University crew. Further publications by him include a *Digest of Overruled Cases* (1887), with Dale; *The Billbury Election* (1892); *Mr. Punch's Prize Novels* (1893); *Annæ Fugaces* (1901); *Adventures of Picklock Holes* (1901); *Crumbs of Pity* (1903); *The Sun-Child* (1904); *The Complete Oarsman* (1908); *Memories of Half a Century* (1908); *Light and Shade* (1909); *Charles Dickens as Editor* (1912), an edition of previously unpublished letters of Dickens, edited by Lehmann; *Sportsmen and Others* (1912); *The Spark Divine: A Book for Animal Lovers* (1913). In 1906 he was elected to Parliament as a Liberal from Leicestershire, South.

LEHMANN-HAUPT, CARL F. (1861-). A German-English archaeologist and historian. He was born in Hamburg of a family of artists and was educated at the Johanneum there and at Heidelberg, Leipzig, Göttingen, Johns Hopkins, and Berlin universities. He was assistant in the Egyptian department of the Royal Museum at Berlin from 1887 to 1898 and taught ancient history in the University of Berlin in 1893-98. He then traveled in Armenia and in 1901 became professor of Greek antiquities at Liverpool. In his special field of Armenian and Babylonian history and archaeol-

ogy he wrote: *Das alt-babylonische Mass- und Gewichtssystem* (1893); *Zwei Hauptprobleme der altorientalischen Chronologie* (1898); *Materialien zur alten Geschichte Armeniens und Mesopotamiens* (1907); *Die historische Semiramis und ihre Zeit* (1910); *Israel, seine Geschichte im Rahmen der Weltgeschichte* (1911); *Solon, the Poet, the Merchant and the Statesman* (1912); and a sketch of Greek history to Chæroneia (1913) in Gercke and Norden's *Einkleitung in die klassische Philologie*.

LEHR, IAR, JULIUS (1845-94). A German economist, born at Schotten, Hesse, and educated at Giessen. He taught at Munich from 1885 until his death. Lehr wrote: *Schutzzoll und Freihandel* (1877); *Eisenbahntarifwesen und Eisenbahnmonopol* (1879); *Politische Oekonomie in gedrängter Fassung* (4th ed, 1905); *Grundbegriffe und Grundlagen der Volkswirtschaft* (1894; 2d ed., 1901); *Produktion und Konsumtion in der Volkswirtschaft* (1895, ed. by Frankenstein).

LEHR, IAR, PAUL ERNEST (1835-). A French legal scholar, born at Saint-Dié (Vosges). He studied in Strassburg, where he was admitted to the bar, and where in 1870 he helped defend the city as captain of the National Guard. In 1875 he was appointed professor of comparative jurisprudence at the Academy of Lausanne, Switzerland. He contributed especially to the knowledge of foreign law by the publication of *Éléments de droit civil germanique* (1875); *Éléments de droit civil russe*, i (1877), ii (1890); *Éléments de droit civil espagnol*, i (1880), ii (1890); *Éléments de droit civil anglais* (1885).

LEHR, IARS, KARL (1802-78). A German classical scholar, born at Königsberg. He studied at the university of Halle and was made professor there in 1845. His most valuable work is *De Aristarchi Studii Homericis*, a comprehensive treatise on early Homeric criticism (1833, 3d ed., 1882), of great value; it led scholars to explain Homer from Homer himself. Of his other writings, mention should be made of his *Quæstiones Epicæ*, dealing with Hesiod (1837); *Herodiani Trias Scripta Minora* (1848); *Populäre Aufsätze aus dem Altertum, vorzugsweise zur Ethik und Religion der Griechen* (1856; 2d ed., enlarged, 1875); and *Die Pindarscholien* (1873), an investigation into the sources of the remaining scholia. Consult E. Kammer, *Karl Lehrs* (Berlin, 1879), and J. E. Sandys, *A History of Classical Scholarship*, vol. iii (Cambridge, 1908).

LEIB, IAP, MICHAEL (1760-1822). An American politician, born in Philadelphia, Pa., of Pennsylvania-Dutch parentage. A Republican of the most radical type, and at first an ardent supporter of Jefferson, he began his political career as a member of the Pennsylvania Legislature. Elected in 1798 to Congress, where he served until February, 1806, he soon attracted attention by his extreme views. In 1802 he became associated with William Duane (q.v.), who, with his journal, the *Aurora*, was beginning to make things uncomfortable for the Jefferson administration. In 1803 he opposed the bill for the creation of Louisiana Territory, drawn probably by Jefferson and Madison, as conferring "royal" power upon the Governor. He was the official mouthpiece of the Duane faction in its successful fight against the McKean-Dallas party, the "quids" as the *Aurora* called them, and, in spite of great opposition,

was triumphantly returned to Congress in 1804. On the floor of the House he reechoed the philippics of the *Aurora* against Gallatin, who had become the special object of Duane's enmity. He was elected to the Senate to fill a vacancy, took his seat in January, 1809, and served until February, 1814, when he resigned. In the Senate he continued his hostility to Gallatin and Madison to such an extent as almost to nullify the administration policy. In 1813, with William Branch Giles (q.v.) and Samuel Smith, he joined the Federalists in refusing to confirm the nomination of Gallatin to the Russian mission with J. A. Bayard and John Quincy Adams. In 1817-22 he was postmaster of Philadelphia by appointment of Gideon Granger (q.v.), the Postmaster-General. The appointment, made in the face of the President's opposition, resulted in Granger's dismissal, and legislation which required the confirmation of postmasters in the future.

LEIBERICH, IAR, BARON MACK VON. See MACK, KARL.

LEIBL, IAR, WILHELM (1844-1900). A German genre and portrait painter, one of the most important and influential of the later nineteenth century. He was born at Cologne, Oct. 23, 1844, and studied under Piloty and Ramberg at the Munich Academy. Impressed by the works of the French Realists, particularly Courbet, at the Munich Exhibition of 1865, he followed Courbet to Paris. In the Salon of 1870 he received the gold medal for his portrait of Frau Gedon. His sojourn in Paris was decisive in Leibl's career, and made him the pioneer of Realism in Germany. After his return to Germany in 1870 he retired to Graselfingen, Bavaria, and removed in 1881 to Aibling. Although he lived a secluded life, his influence extended over an entire generation. He combined unusual knowledge with great artistic skill. Although a master of detail, he excelled also in broad sweeping brushwork. His genre subjects are Bavarian peasants, but he does not treat them anecdotally, as did former German genre painters. They are the embodiment of a robust, sober, hard-headed race, seldom depicted in action, yet full of latent power and energy. His art falls into three periods. In the first he paints under the influence of the French Realists, with great breadth and power, as in the "Cocotte" and the "Dinner Party" (Herr Seeger, Berlin). The transition to careful surface execution can be traced in "The Dachauer Peasant Women" (1874) and the "Hunter" (both in the National Gallery, Berlin), and in "The Village Politicians" (1876). The minute finish of his second period is best shown in "Three Women in Church" (1883, Hamburg Gallery). His third manner combines breadth, delicacy, and a marvelous fusion of color, suggestive of Holbein, in a light joyous tone. To this period belong his "Two Poachers" (Berlin Gallery), "Old Woman Spinning," "Reading the Paper," "A Provincial" (Pinakothek, Munich), "In the Kitchen" (Stuttgart Museum). His portraits, which are among the best of the century in Germany, include likenesses of his father (Wallraf-Ricartz Museum, Cologne), the painter Paulsen (Berlin Gallery), Frau Rosner Heine (1900), and the landscape painter Sperl (Budapest Gallery), with whom he occasionally collaborated, notably in "Girls in a Fruit Orchard" (Cologne Museum). Leibl was also an etcher of note. He became a member of the

Academy of Berlin, and received the Prussian large gold medal for art and several exhibition medals. Consult his biographers Gronan (Bielefeld, 1901) and Maur (Berlin, 1906).

LEIBNITZ, lib'nits (Ger. *Leibniz*), GOTTFRIED WILHELM VON (1646-1716). A German philosopher and mathematician, born in Leipzig, July 1, 1646. His father, who was professor of law at the university, died when Leibnitz was six years old. He studied at the *Nikolaischule* of his native city, entered the university with unusual preparation, in his fifteenth year, and selected the law as his profession, but devoted himself also to philosophy and literature. When 17 years old he defended a remarkable thesis entitled *Disputatio Metaphysica de Principio Individui*, and in the summer of the same year he spent some time at the University of Jena, studying mathematics. In 1664 he published *Specimen Difficultatis in Jure*, and in 1666 *Dissertatio de Arte Combinatoria*. In the latter year he presented himself for the degree in law. In consequence of his youth, however, he was not permitted to take it at Leipzig, but a few months later, November, 1666, he received the degree of *doctor juris* from Altdorf. After pursuing further studies he had the good fortune to become a kind of protégé of Baron von Boyneburg, ex-Prime Minister to the Elector of Mainz. At Boyneburg's suggestion he dedicated to the Elector an essay, *Nova Methodus Discendæ Docendæque Jurisprudentiæ* (1667). This gained an appointment for Leibnitz in the Elector's service. Leibnitz now (1668-69) set to work to reform the *Corpus Juris* (q.v.). Meanwhile he published several theological treatises. In 1670, at the age of 24, he was appointed assessor on the bench of the upper court of appeals, which was the supreme court of the electorate. In 1672 he accompanied Boyneburg's sons to Paris, and there wrote with a view to submission to Louis XIV a plan for the invasion of Egypt. Leibnitz's real intention in this memorandum was to divert Louis's attention from plans against Germany. Louis seemingly never received this document; at any rate he did not act on the advice. It was reserved for Napoleon to make the invasion of Egypt (1798), and five years later (1803) Napoleon discovered to his surprise that he had been anticipated in his plan by the German philosopher. From Paris Leibnitz went to London; both in Paris and in London he formed the acquaintance of the most eminent philosophers, among them Boyle, Huygens, and Malebranche. In 1676 Leibnitz entered the service of the Duke of Brunswick-Lüneberg as librarian and privy councillor. After a tour of historical exploration, he prepared a series of works illustrating the history of the house of Brunswick. He undertook likewise the scientific direction and organization of the mines in the Harz, into which he introduced many improvements; he took an active part in negotiations for Church unions, and in the theological discussions connected therewith, which formed the subject of a protracted correspondence with Bossuet and with Pellisson. His private studies, however, were chiefly philosophical and philosophical. He was chief organizer in 1700 and first president of the Academy of Sciences of Berlin, which later became the Berlin Academy; and he proposed at Vienna the establishment of a similar organization, which, however, was not established till 1846, the two hundredth an-

niversary of his birth. It was to him, likewise, that Peter the Great owed the plan of the since celebrated Academy of St. Petersburg. The Czar bestowed on Leibnitz a pension and the title of Privy Councillor. In 1714 Leibnitz wrote the *Monadologie* in French for Prince Eugene of Savoy. In the same year he was appointed Privy Councillor and Baron of the Empire. Towards the close of his life Leibnitz spent some time in further work on the annals of the house of Brunswick, and was drawn into a philosophical controversy with Samuel Clarke (q.v.). Before the close of the controversy he died rather unexpectedly at Hanover, Nov. 14, 1716. A monument has been erected to him in Hanover, and in 1883 a statue was unveiled in Leipzig.

Leibnitz was eminent in history, divinity, philosophy, political studies, experimental science, mathematics, mining engineering, and even belles-lettres. But it is chiefly through his philosophical and mathematical reputation that he lives in history. He was greatly influenced by the Cartesian philosophy; but he differed from Descartes both in his method and in some of his principles. In epistemology Leibnitz was an opponent of the doctrine that the mind, at birth, is a *tabula rasa*, a blank tablet to be written on by experience. He maintained, on the contrary, that, although we are not born with ready-made knowledge in the sense of clear, distinct ideas, still there are "small, dark notions of the soul," which are not the mere passive results of impressions. There may be perceptions of which we are not aware, or which are not aware of themselves. Indeed, in the last resort, Leibnitz denies the reality of everything which is not a percipient or a perception. The perception may be very minute, so as not to be self-conscious, or it may be conscious of itself. In the latter case it is called apperception. Growth in knowledge consists in the process of clarification and distinction of ideas. Sense is not fundamentally different from intellect; it is only confused intellect. Nothing comes to the soul from without. Everything it seems to acquire in the process of learning is originally possessed in obscure form. Virtually, therefore, all ideas are innate in the sense that they are not acquired; but the explicit consciousness of them is acquired. That which has presentations is called by Leibnitz a monad, or a unity, just because it is thus a self-contained system of perceptions, not influenceable from without. It is described as having no windows through which it can look out upon the rest of the universe, but as mirroring the whole universe within itself. But because each monad mirrors the whole universe, each is in so far like the others; the perceptions in each are precisely alike in content; the only difference is that these perceptions may vary indefinitely in clearness and distinctness. Those monads in which all perceptions are obscure are called matter; from matter up to God there is no difference in kind, merely a difference in degree of clearness and distinctness of presentations. Monads are found in all stages of clearness of presentation (see CONTINUITY, LAW OF), and each monad tends towards clarification and distinction of these presentations. Those presentations which are merely clear, but not distinct, i.e., which are not confused with others, but are not adequately known in themselves, are objects of empirical or contingent knowledge; those pres-

entations which are both clear and distinct are objects of rational or necessary knowledge. The validity of rational knowledge is guaranteed by the principle of contradiction that of empirical knowledge by the principle of sufficient reason, which Leibnitz was the first to introduce into a system of philosophy. In other words, necessary truths are analytical, contingent truths synthetical. The latter must have authentication from without; an adequate reason must be given for their validity. The former are authenticated by the fact that it is impossible to think their opposites. The changes that take place at the same time in various monads have no influence on each other. There is no interaction. But there is a preestablished harmony of such sort that presentations in one monad correspond to those in another. The relation between any two monads is likened to that between two clocks keeping perfect time. They do not influence each other's movements, but they keep together. This correspondence is due to the fact that God, the monad of monads, created all other monads in such a way that in their subsequent course of development their changes should harmonize. These monads are immortal. In choosing to create this world of monads, God selected the best of all possible worlds. God's wisdom gave Him an infinite range of choice; His goodness determined the selection He made. This is Leibnitz's peculiar optimism, which does not assert that everything is perfectly good, but that the world as a whole is the best of all possible worlds. In this way Leibnitz sought to justify God in creating a world with evil in it. This is Leibnitz's theodicy.

His mathematical work is worth special treatment. He began his work on the calculus (q.v.) about the time of his settling in Hanover in 1676, and two years later he had developed it into a fairly complete discipline. It was not, however, until six years after this that he published (1684) anything upon the subject. Two years earlier (1682) he and Mencke founded the *Acta Eruditorum*, and it was in this celebrated journal that most of his mathematical memoirs appeared (1682-92). The first one on the new calculus was his *Nova Methodus pro Minimis et Maximis* (1684). Newton (q.v.) had known and used the principles of the fluxional calculus as early as 1665, and had made them public, although not in print, in 1669. Leibnitz had access to certain letters of Newton's in 1676. He also had the opportunity of knowing of the theory when he was in London in 1673, and with the mathematical acquaintances he met there it might be expected that the new theory would be discussed. There is, however, no exact evidence that he knew anything of Newton's discovery at the time he began his own work. It should, however, be stated that the germs of the theory of the calculus are to be found in the works of Fermat, Wallis, and Cavalieri, all of which were well known at that time in the mathematical world.

The essential differences in the two systems lie in the notation and the method of attack. Newton used \dot{x} where Leibnitz used dx , and based his treatment on the notion of velocity of material substances where the latter proceeded from the concept of the infinitesimal. As mathematics developed, the differential notation proved greatly superior to the fluxional, and in the first quarter of the nineteenth century it was

adopted in England, as it had been adopted a hundred years earlier on the Continent. With this change of notation the so-called fluxional calculus disappeared and the differential calculus took its place.

The further mathematical work of Leibnitz was not of a high order. His contributions to analytic geometry were noteworthy only for laying the foundation (1692) for the theory of envelopes, and for introducing the terms "coordinates" and "axes of coordinates." He contributed a little to the theory of mechanics, but his work was often inaccurate, and he made no great discoveries.

In addition to Leibnitz's works already referred to, special mention should be made of *Nouveau système de la nature* (1695); *Essais de théodicée* (1710); *Principes de la nature et de la grâce* (1714); *Nouveaux essais sur l'entendement humain* (finished by 1704 and published posthumously in 1765), and *A Collection of Papers which Passed Between the Late Mr. Leibnitz and Dr. Clarke in the Years 1715 and 1716* (London, 1717). His Latin and French philosophical works have been many times collected, edited, and published. The editions of Erdmann (Berlin, 1840), of Jaret (Paris, 1866; 2d ed., 1900), and of Gerhardt (Berlin, 1875-90) are especially noteworthy. The publishing of a complete edition of all Leibnitz's works was undertaken by Pertz. This edition, as it now stands, contains four volumes of history (Hanover, 1843-47); seven volumes of mathematics, edited by Gerhardt (Berlin and Halle, 1849-63); but of the philosophical portion only one volume appeared. A satisfactory edition is yet to be published. In 1900 some French and German scholars undertook to prepare for such an edition; but so far only a few isolated volumes have appeared. In the *Journal of Speculative Philosophy* are to be found translations of the *Monadologie* and many of the lesser writings; and some of the important philosophical works have been translated by G. M. Duncan (New Haven, 1890); the *Nouveaux essais* by A. G. Langley (London, 1894); *The Monadology and Other Philosophical Writings* by R. Latta (Oxford, 1898).

1907-09; Eng. trans., 2 vols., New York, 1884); F. O. R. Falckenberg (New York, 1893); E. K. B. Fischer (10 vols., Heidelberg, 1897-98); Wilhelm Windelband (2d ed., New York, 1910); Harald Höffding (ib., 1912); Frank Thilly (ib., 1914).

LEICESTER, lēs'tēr. The capital of Leicestershire, England, on the Soar, 100 miles north-northwest of London (Map: England, E 4). It is well built, with spacious and regular streets, interesting municipal buildings, educational and benevolent institutions, and numerous churches, one of which, St. Nicholas, is partly constructed of bricks from the old Roman wall. It is a progressive municipality, and owns or maintains an excellent water supply, gas and electric-light plants, markets, abattoirs, baths, bathing places, libraries, technical schools, an art gallery, artisans' dwellings, garden allotments, four parks, eight recreation grounds and two public gymnasiums, three sewage farms, an isolation hospital, a lunatic asylum, cemeteries, a fire brigade, and an effective police force. Manufactures of boots and shoes, elastic webbing, and woolen and cotton hosiery goods, lace making, wool combing, matting, brickmaking, and dyeing are extensively carried on. Leicester lies near a coal field, and is the centre of a famous agricultural and wool-raising district. It is also a suffragan bishopric of the diocese of Peterborough. An early British city, the capital of the Coritani, it was known to the Romans as Ratæ. It was one of the five Danish burghs, and from 680 to 874 the seat of a bishopric. The Mount or Castle View, an artificial earthwork on which stood the donjon or keep, and the great banqueting hall, modernized and used as an assize court, are all that remains of the Norman castle, dismantled by Charles I in 1645. The ruins of the abbey of St. Mary Pré (of the Meadow), where Cardinal Wolsey died in 1530, still exist. Numerous municipal charters and privileges, the first granted by King John and the last by Queen Elizabeth, governed the town prior to the Municipal Corporations Act. Thomas Cook (1808-1892), the founder of Cook's tours, was born in the town. Pop., 1901, 211,600; 1911, 227,242. Consult: Johnstone, *History of Leicester* (1892); "Leicester as a Municipality," in *Municipal Journal*, viii, 878 (London, 1899); Bateson, Stevenson, and Stocks, *Records of the Borough of Leicester* (Cambridge, 1901).

LEICESTER. A town in Worcester Co., Mass., 6 miles west-southwest of Worcester (Map: Massachusetts, D 4). It is in a fertile agricultural region, which contains some good timber. The manufacture of clothing constitutes the chief industry. The town has a public library. Pop., 1900, 3416; 1910, 3237.

LEICESTER. A tragedy by William Dunlap (1794), said to have been the first American tragedy put on the stage. It is also called *The Fatal Deception*.

LEICESTER, EARL OF. See MONTFORT, SIMON DE.

LEICESTER, ROBERT DUDLEY, EARL OF (c.1532-88). A favorite of Queen Elizabeth. He was the fifth son of John Dudley, Duke of Northumberland, and received a very good education. At an early age he was taken to court, where he met the Princess (later Queen) Elizabeth. In 1550 he was married publicly to Amy Robsart, and, although they lived much apart, there was never, so far as is known, any serious

quarrel between them. After the death of Edward VI, in 1553, Dudley aided in the attempt to place his sister-in-law, Lady Jane Grey on the throne, for which he was imprisoned in the Tower. On the accession of Elizabeth in 1558, Dudley rapidly advanced and became the Queen's favorite, and for a long time it was thought they would marry. Nevertheless, Elizabeth allowed Dudley little or no influence in political affairs. The intimacy between Elizabeth and Dudley gave rise to several rumors of a scandalous nature, and when in 1560 Lady Amy was found dead from a fall down a flight of stairs, the belief spread that she had been murdered, though there is no evidence to prove that it was not an accident. Scott's *Kenilworth* is based on the popular rumors of the time. In 1563 it was suggested that Dudley should marry Mary, Queen of Scots, and he was made Earl of Leicester; but in 1565 the Scottish Queen married Darnley. Meanwhile Leicester had been made chancellor of Oxford University, but his future was darkened by the fact that Elizabeth realized the impracticability of marrying him, for he was very unpopular and opposed by all the old nobility. In 1571 he seems to have married the widow of John, second Baron of Sheffield, but afterward he refused to acknowledge her as his wife, and in 1578 married Lettice Knollys, Countess of Essex, at the news of which the Queen was very angry. When in 1585 Elizabeth decided to aid the Netherlands in their struggle for independence from Spanish rule, Leicester received command of the expedition, and in the following year the States-General elected him Governor. His incapacity, however, soon showed forth glaringly, and he lost town after town, so that the Dutch were glad when in 1587 he was recalled. In 1588 Elizabeth appointed him commander of the forces assembled to oppose the Spanish invasion, but he died soon after, on Sept. 4, 1588. Consult: Samuel Jebb, *The Life of Robert, Earl of Leicester* (London, 1727); Amye Robsart and the Earl of Leicester: A Critical Inquiry into the Authenticity of the Various Statements in Relation to the Death of Amye Robsart (ib., 1870); F. J. Burgoyne (ed.), *History of Queen Elizabeth, Amy Robsart, and the Earl of Leicester, being a Reprint of "Leicester's Commonwealth," 1641* (ib., 1904); Mrs. Aubrey Richardson, *The Lover of Queen Elizabeth* (ib., 1907).

LEICESTERSHIRE. An inland administrative county of England, south of the counties of Derby and Nottingham. Area of county 819 square miles; pop., 1901, 225,911; 1911, 249,361 (Map: England, E 4). The Soar and Avon, tributaries respectively of the Trent and Severn, are the chief rivers. Coal is mined in the west, and granite, slate, and freestone are quarried. The soil is a loam of varying degrees of fertility, and while barley, wheat, and oats are cultivated, the chief agricultural branches are grazing, stock raising, and dairy farming. Stilton cheese is chiefly made in this county, while Melton Mowbray is famous for its pork pies. The local breed of sheep is noted for its fine wool. The principal manufactures are hosiery, agricultural implements, and pottery. Leicestershire is one of the greatest fox-hunting counties in England, the chief centre of this sport being at Melton Mowbray, and the Quorn hunt at Quorndon is one of the most famous in the country. Capital, Leicester. The early inhabitants were the

Celtic Coritani, who were conquered by the Romans. Later the region was part of the Mercian Kingdom, until subdued by the Danes, and afterward by the Normans.

LEICESTER SQUARE. A London square, formerly Leicester Fields, laid out in the latter part of the seventeenth century. Many French Huguenots made their residence there after the revocation of the Edict of Nantes in 1685, and it is still a popular foreign quarter. Savile House and Leicester House once stood on it, and in the latter Queen Elizabeth of Bohemia died in 1662. Reynolds, Hogarth, Hunter, and Newton lived in the . . . and their busts adorn the square . . . seventeenth century it frequently served as a dueling ground.

LEICHHARDT, LIK'härt, FRIEDRICH WILHELM LUDWIG (1813-48). A German explorer, born at Trebatsch, Province of Brandenburg, Prussia. After studying philology at Göttingen and natural history at Berlin, he traveled in Italy, France, and England and in 1841 went to Australia. Here he at once began the geological investigations which he later described in his *Contributions to the Geology of Australia* (1855). In 1844 he set out on his second expedition to Australia, and with about seven companions traveled from Moreton Bay, on the eastern coast, through Queensland, to Port Essington, in the extreme north of the continent. After accomplishing this journey, in which he covered about 2000 miles in 16 months, Leichhardt returned to Sydney and published the results of his expedition in his *Journal of an Overland Expedition in Australia from Moreton Bay to Port Essington* (1847). In March, 1848, he started on his last trip, in which he proposed to go from Moreton Bay across the central part of the continent from east to west. The last information received from him was sent from Macpherson's Station on the Cogoon River, on April 3, 1848. No less than five relief expeditions were organized in 1851-65, but these failed to discover a trace of the lost explorer, whose disappearance remains unexplained. A district or grand division of Queensland, a county of New South Wales, and a town in Cumberland County, N. S. W., not far from Sydney, were named in his honor. Consult the study by Zuchold (Leipzig, 1856).

LEICHTENTRITT, LIK'ten-trit, HUGO (1874-) A German writer on music, born at Pleschen (Posen). In 1889 he came to America, and soon afterward entered Harvard, where he studied music under J. K. Paine. He returned to Germany in 1895, spending the next three years as a pupil of the Königl. Hochschule in Berlin. In 1901 he joined the faculty of the Klindworth-Scharwenka Conservatory. Numerous essays published in various musical journals soon established his reputation. Among his more important books are: *Chopin* (1904), *Geschichte der Musik* (1905), *Geschichte der Motette* (1908). He edited many works of older masters, and also made himself known as a composer of meritorious songs and chamber music.

LEIDEN, LI'den. A city of the Netherlands. See **LEYDEN**.

LEIDENFROST, LI'den-fröst, JOHANN GOTTLIEB (1715-94). A German scientist and professor of medicine. He was born at Rosperwenda, was educated in Giessen, Leipzig, and Halle, and in 1743 became professor at Duisburg. He is best known from his book *De Aquæ*

Communis Nonnullis Qualitatibus (1796) and for his *Opuscula Physico-Chemica et Medica* (1797). In the former he describes the experiment, sometimes called after him, in which he dropped water on a hot plate and proved the spheroid shape of the drop and the presence of a layer of vapor between drop and plate.

LEIDY, LI'di, JOSEPH (1823-91). A distinguished American naturalist, born in Philadelphia, Pa. He obtained his degree in medicine at the University of Pennsylvania in 1844, executed the dissections and drawings for the work on *Terrestrial and Air-Breathing Mollusks of the United States* (Boston, 1845), by Amos Binney, was appointed chairman of the Board of Curators of the Academy of Natural Sciences in 1846, and became demonstrator of anatomy in the University of Pennsylvania. In 1853 he was appointed full professor of anatomy in the Medical School of the university. He was also the first director of the biological department of the university, organized in 1884, and for a time occupied the chair of natural history in Swarthmore College. In 1881 he was elected president of the Academy of Natural Sciences at Philadelphia and in 1885 president of the Wagner Free Institute of Science in that city. He received the Walker grand honorary prize of the Boston Society of Natural History in 1880, and, for distinguished contributions to the science of paleontology, the Sir Charles Lyell medal of the Royal Geological Society of London in 1884 and the Cuvier medal of the Institut de France in 1888. His contributions to the natural sciences included comparative anatomy, botany, mineralogy, geology, and microscopic zoology, helminthology, and more especially paleontology. His researches in connection with the fossil horse and camel, published in the *Proceedings* of the Academy of Natural Sciences and of the Smithsonian Institution from 1847 to 1891, were of acknowledged service to Darwin and Sir Charles Lyell. He also discovered (1846) the hog to be the host by which the parasite *Trichina spiralis* is introduced into the human system. His writings include numerous papers contributed to the *Transactions* of the American Philosophical Society, the publications of the Wagner Free Institute of Science, Smithsonian publications under the auspices of the United States Geological Surveys, and the *Journal and Proceedings* of the Academy of Natural Sciences—in all, 553. *A Flora and Fauna within Living Animals* (1851); *Description of the Remains of Extinct Mammalia and Chelonians from Nebraska Territory* (1852), *Cretaceous Reptiles of the United States* (1865); *The Extinct Mammalia Fauna of Dakota and Nebraska* (1869); *Contributions to the Extinct Vertebrate Fauna of the Western Territories* (1873); *The Fresh-Water Rhizopods of North America* (1879); *Treatise on Human Anatomy* (1861-89), are among the most important. Dr. Leidy was an honorary member of more than 65 scientific societies of the United States and other countries. Consult the memoir by H. C. Chapman, in the *Proceedings* of the Academy of Natural Sciences (1891).

LEIF (LI'f) **ERICSON.** See **ERICSON, LEIF**.

LEIGH, LI. A town in Lancashire, England, 11 miles west of Manchester. Silk, cambric, muslin, fustian, and agricultural implements are the leading manufactures; there are glass-works, foundries, and breweries, and in the

vicinity are productive coal mines (Map: England, D 3). The town has an ancient and heavily endowed grammar school and a restored parish church dating from 1279. It owns its gas, water, and electric-lighting works, baths, markets, and cemetery, and maintains a free library, hospital, and fire brigade. Sewage is chemically treated and utilized. The town dates from the twelfth century, but was not incorporated until 1899. Pop., 1901, 40,000; 1911, 44,103.

LEIGH, EDWARD (1602-71). An English Puritan writer, born at Shawell, Leicestershire. He graduated M.A. at Oxford University in 1623 and enrolled at the Middle Temple. He was elected a member of Parliament in 1640 and became a colonel in the Parliamentary army in 1644, but was among those expelled from the House of Commons in 1648. His chief work was the *Critica Sacra, or Observations upon all the Greek Words of the New Testament and on the Primitive Hebrew Words of the Old Testament* (2 vols., 1639-42; 4th ed., 1662). He was also author of *A Treatise of the Divine Promises* (1633; 4th ed., 1657); *A Treatise of Divinity* (3 parts, 1647); *The Saint's Encouragement in Evil Times* (1648; 2d ed., 1651); *A Systeme or Body of Divinity* (1654, 2d ed., 1662).

LEIGHTON, ALEXANDER (1568-1649). An English physician and divine. He was born at Edinburgh, Scotland, was educated at St. Andrews, and in 1613 became a Presbyterian preacher in London, practicing medicine at the same time. He published: *Speculum Belli Sacri, or The Looking-Glass of the Holy War* (1624), an attack on Romanism; and an *Appeal to the Parliament, or Sworn's Plea against the Prelacie* (1628). The latter—denouncing the bishops in unsparing terms, rebuking the King for marrying a papist, and bidding Parliament rid him of his bad advisers—was deemed libelous in respect of the King, Queen, and bishops. Leighton was sentenced by the Star Chamber to be degraded from holy orders, to be twice whipped publicly, to lose his ears, one at a time, to have his nose slit, to stand twice in the pillory, to be branded on the face with the letters S. S. (sower of sedition), to pay a fine of £10,000, and suffer life imprisonment in the Fleet. After the first half of the sentence of physical torture had been executed, Leighton escaped; upon his capture the second half was apparently remitted. The Long Parliament released him in 1640, after he had been confined for 11 years. He received a pecuniary indemnity and in 1642 was made keeper of Lambeth Palace as a state prison, where he died.

LEIGHTON, FREDERICK, LORD (1830-96). An English historical painter. He was born at Scarborough, Dec. 3, 1830, and spent much of his youth in travel. His father, a physician of means, enabled him to prosecute very extensive studies in painting. He began at 14 in Florence, continuing in Frankfort, Brussels, Paris, and Rome, his chief master having been Steinle at Frankfort. His first picture, exhibited at the Royal Academy, "Cimabue's Madonna Carried in Triumph through Florence" (1855, Tate Gallery, London), made a great impression and was purchased by the Queen. After this he spent four years in Paris, studying part of the time under Ary Scheffer. In 1858 he joined for a short time the Pre-Raphaelite Brotherhood, his "Lemon Tree" and "Byzan-

tine Wellhead" receiving the enthusiastic praises of Ruskin. He soon ceased this manner, and in 1866 his "Venus Disrobing for a Bath," one of his most admirable pictures, secured his election as associate of the Royal Academy. He became a member in 1869 and president in 1878, fulfilling the public functions with especial grace. Although a bachelor, he entertained royally in his fine house at Kensington. He received first-class medals at Antwerp in 1885 and Paris in 1889, was an honorary member of many foreign academies and orders, and received honorary degrees from Oxford, Cambridge, and Edinburgh. In 1886 he was made Baronet, and on Jan. 21, 1896, he was raised to the peerage as Baron Leighton of Stretton. He died on the following day in London and was buried in St. Paul's Cathedral.

Leighton was a clever rather than a great artist. His work is finished and painstaking, the result of study and cultivated taste rather than genius. His art is the equivalent of the classical art of Ingres, softened by a sort of romantic feeling. His earlier works (before 1866) include: "Paolo and Francesca," the "Odalisque," "Dante at Verona," "Orpheus and Eurydice." Among the most important of his later paintings are: "Hercules Wrestling with Death" (1871); the "Condottiere" (Birmingham Gallery); "Summer Moon"; "Daphnephoria" (1876); portrait of Sir Richard Burton (1876), "Music Lesson" (1877); "Biondina" (1879); his own portrait (1880, in the Uffizi Gallery, Florence); "Wedded" (1882); "Last Watch of Hero" (1887); "Captive Andromache" (1888, Manchester Gallery); "Bath of Psyche" (1890, Tate Gallery); "Rizpah" (1893); "Phœnicians Trading with Britons," a decoration for the Royal Exchange. He painted a decoration "Music," for the ceiling of the Marquand residence, New York, and in the Metropolitan Museum are "Lachrymæ," "Lucia," and "An Odalisque." He painted a few portraits, the finest of which include those of Signor Costa, Mrs. Stephen Ralli, Sir Richard Burton, and his own portrait (Uffizi). Leighton also attempted a few pieces of sculpture with success, the best of which are "Athlete Struggling with a Python" (1877) and a "Sluggard," both in Tate Gallery. He also designed illustrations to George Eliot's *Romola* and *Daniel's Bible*. His *Addresses to the Students of the Royal Academy* were published in 1896.

Bibliography. The best works on Leighton are E. I. Barrington, *The Life, Letters, and Work of Frederick Leighton* (2 vols., New York, 1906); Edgumbe Staley, *Lord Leighton of Stretton* (ib., 1906). Briefer biographies are by L. B. Lang (London, 1885); Ernest Rhys (ib., 1905); Sir Wyke Bayliss, *Five Great Painters of the Victorian Era* (ib., 1902); Kenyon Cox, *Lord Leighton* (New York, 1907).

LEIGHTON, ROBERT (1611-84). Archbishop of Glasgow. He was born probably in London. He entered Edinburgh University in 1627, took his degree of M.A. in 1631, and afterward proceeded to France, where he was intimate with the parties of the Catholic church. Returning to Scotland, he was appointed, in 1641, to the parish of Newbattle, near Edinburgh; but he was not militant enough to please his fierce copresbyters, while they appeared to him, who had studied far more deeply than any Scotchman of his time the various ecclesiastical politics of Christendom, truculent about trifles.

In 1652 he resigned his charge and in the following year was elected principal of the University of Edinburgh and professor of divinity, a dignity which he retained for 10 years. After the restoration of Charles II Leighton, who had long separated himself from the Presbyterian party, was, with much reluctance, induced to accept a bishopric, as a part of the plan of the King to impose episcopacy upon Scotland. He chose Dunblane because it was small and poor. Unfortunately for his peace, the men with whom he was now allied were even more intolerant and unscrupulous than the Presbyterians. Twice he proceeded to London (in 1665 and 1669) to implore the King to adopt a milder course. Nothing was really done, though much was promised, and Leighton had to endure the misery of seeing an ecclesiastical system which he believed to be intrinsically the best perverted and himself made the accomplice. In 1670, on the deprivation of Dr. Alexander Burnet, he was made Archbishop of Glasgow, an office which he accepted only on the condition that he should be assisted in his attempts to carry out a liberal measure for "the comprehension of the Presbyterians." His efforts, however, were vain; the high-handed tyranny of his colleagues was renewed, and Leighton resigned in 1674. After a short residence in Edinburgh he went to live with his sister at Broadhurst in Horsted Keynes, Sussex, where he spent the rest of his days in retirement. He died June 25, 1684. Leighton's complete works (he published nothing during his lifetime) are to be found in an edition published in London (ed. by West, 7 vols., 1869-75); a volume of selections by Blair appeared in 1883. The most admired of his writings is his commentary on First Peter. Consult his biography by West and Blair in the editions mentioned above, and Bishop Burnet, *History of my own Time*. A Leighton bibliography, compiled by Blair, is in the *British and Foreign Evangelical Review* for July, 1883.

LEINSTER, lén'stēr. One of the four provinces of Ireland, occupying the southeast portion of the country and bounded on the east by St. George's Channel and the Irish Sea. Area, 7622 square miles; divided into the counties of Dublin, Meath, Louth, Kildare, Carlow, Kilkenny, Wexford, Wicklow, West Meath, Longford, King's, and Queen's (q.v.). Pop., 1901, 1,152,829; 1911, 1,162,044.

LEIPA, or **BÖHMISCH-LEIPA**, bě'mish lř'pā (Boh. *Ceská-Lipa*). A town of Bohemia, Austria, 42 miles north-northeast of Prague, on the river Polz (Map: Austria-Hungary, D 1). One of its Catholic churches was begun by Wallenstein in the seventeenth century. It manufactures print goods, velvet, sugar, starch, beer, leather, lumber, pianos, and has a trade and agricultural school. The shops of the Northern Railway of Bohemia are situated here. Pop., 1900, 10,674; 1910, 13,493, mostly Germans.

LEIPO'A (Neo-Lat., probably from the native name). An Australian megapode, called native pheasant and mallee bird by the country people. See MOUND BIRD.

LEIPZIG, lř'psik, or **LEIPSIC**, lř'psik. The largest city in the Kingdom of Saxony, and the third city in size in the German Empire, in lat. 51° 20' N. and long. 12° 23' E., situated on the Elster, Pleisse, and Parthe, 74 miles by rail northwest of Dresden (Map: Germany, E 3).

Leipzig lies in a rich and extensive plain. Its fortifications no longer exist, having given way to pleasant promenades. The mean annual temperature is 46.7° F.; rainfall in 1913, 23 inches.

In the old town, which has become more and more exclusively the business section, are many ancient buildings and narrow streets, diversified by handsome modern edifices in the Renaissance style. Here quaint, shop-lined courts serve to connect streets and shorten distances. This section is surrounded by finely built modern districts, forming both an inner and an outer circle of suburbs, beautified by spacious avenues and promenades. Beyond these suburbs are still other suburban areas, incorporated with the city in 1892 and subsequently. The spacious thoroughfare called the Brühl crowns the northern part of the old town. In the vicinity are the monument to Hahnemann, of homeopathic fame, and the monument, with the Polish eagle, on the spot where Poniatowski was drowned at the beginning of Napoleon's retreat in 1813. Along the avenues in the old town are large squares, the most important of which is the imposing Augustusplatz, surrounded by the Augusteum (main building of the university), post office, theatre, and museum—one of the largest squares in Europe. In the Johannisplatz rises the Reformation monument to Luther and Melancthon, unveiled in 1883 on the four hundredth anniversary of Luther's birth. In the market place in the centre of the old part of the town stands the great war monument by Siemering, with bronze figures, unveiled in 1888.

Architecturally the churches of Leipzig have little to offer. Their number is upward of 30, of which 25 are Evangelical-Lutheran. The Thomaskirche has more than a local fame for the weekly motets sung by a choir of boys. This church, dating from the early part of the thirteenth century, was enlarged in 1482 and rebuilt in 1885-89. The University or Pauline Church was built about 1240 and in 1545 was dedicated by Luther. During the reconstruction of the church of St. John, about 1895, the tomb of Bach was discovered. His remains as well as those of the poet Gellert repose in the new church. Leipzig has an Anglo-American church, dedicated in 1885. Among the prominent secular edifices, the several university buildings are of particular interest. Among these are the extensive Augusteum with an aula and fine reliefs; the Fridericianum, built in 1843, the Mauricianum, dating from 1649; and the immense Albertinum. The university library, containing 570,000 volumes in 1913, was completed in 1891. The imposing new Gewandhaus, with a large concert room, is enriched with sculptures by Schilling. In front stands the statue of Mendelssohn, who was the conductor of the Gewandhaus concerts for several years. The old Gewandhaus, or Hall of the Cloth Merchants, where he directed, is now used for business purposes. The splendid Imperial Supreme Court building was completed in 1895. It consists of a central edifice, with a copper dome 224 feet high surmounted by a large bronze figure of Truth, and of wings appropriately adorned with columns and sculptures. Other conspicuous edifices are the Booksellers' Exchange, in German Renaissance style, with archives and a library; the elegant new Renaissance Stock Exchange, with an immense hall; and the Crystal Palace, used for entertainment purposes. In the vicinity stands the curious old Rathaus, built in the

middle of the sixteenth century. The Königs-haus in the market place is associated with memories of Napoleon, Charles XII, and Peter the Great. In the old castle of Pleissenburg, formerly a citadel and destroyed in later years, Luther and Eck held their disputations, and Pappenheim died. The Museum building was completed in 1858, and is ornamented with statues. The splendid new theatre was finished in 1868 in the Renaissance style. Among all the literary associations of Leipzig no other is so famous as Auerbach's cellar, with its curious vaulted ceiling and mural paintings—the scene of a part of Goethe's *Faust*. Among the monuments not already mentioned are a bronze statue of Leibnitz, who was born in Leipzig, and the new monument to Bismarck, and the one to Schumann, who lived here for 14 years.

Leipzig is the centre of the German book trade, and is famous for its publishing industry. Other of its leading industries are wood carving and paper making. Still other products are machinery, leather, textile goods, pianos, tobacco and cigars, chemicals, and foodstuffs. Leipzig leads in the bookselling and publishing trade of the world, having about 1000 publishing and book-selling establishments (including those of the art and music trade). Its commercial importance is due in part to its favorable situation between the Elbe and Rhine basins, and between the Thuringian mountains and the Erzgebirge. It holds famous fairs at New Year's, Easter, and Michaelmas, with furs, glass, cloth, and leather as the principal lines of trade, the value of the annual sales amounting to \$50,000,000. Leipzig is a world market for furs. Since the middle of the nineteenth century the historic fairs, though increasing in the actual value of their transactions, have declined in relative commercial importance. Among the countries importing from Leipzig the United States ranks first. The American imports embrace furs and hides, books, leather gloves and leather, chemicals and volatile oils, bristles, woolen goods, carpets, and musical and other instruments.

Leipzig is famous for its educational advantages. Besides its university (see LEIPZIG, UNIVERSITY OF), there are a municipal Gymnasium, founded in 1221, among whose celebrated cantors was Bach; another municipal Gymnasium, dating from 1511; also two state Gymnasias, a municipal realgymnasium, four realschulen; a royal art academy, an industrial school; a royal builders' school; a municipal industrial school and many other schools, for secondary or special education. The first commercial high school in Germany was founded in 1898 in Leipzig. Besides the university library there is the municipal library with 129,500 volumes in 1913. The museum of the book trade is perhaps the most valuable of its kind in existence. The Grassi Museum contains art-industrial and ethnographical collections; also a fine Historical Museum of Music; and the Permanent Exhibition of Machinery and Furniture. The important collections of the Leipzig Museum include some noteworthy sculptures—Thorvaldsen's "Ganymede," Hildebrand's "Adam," Klinger's "Cassandra" and "Salome," and Schilling's "Phidias." Among its valuable pictures are Preller's cartoons representing scenes from the *Odyssey*, several examples of Lenbach and Böcklin, and Delaroche's "Napoleon at Fontainebleau." These collections contain more than 750 oil paintings, 275 sculptures, and 100 cartoons

and aquarelles. The Royal Academy of Plastic Arts dates from 1764. Leipzig abounds in admirable organizations for the advancement of knowledge. There are the Historical Society, with relics of the famous battlefield; the Academy of Art; School of Industrial Art; the Technical School; and the celebrated Royal Conservatory of Music, founded in 1887. In the new Gewandhaus weekly concerts are given in winter.

Leipzig has been since 1879 the seat of the supreme law court of the Empire. It is the seat also of the Imperial Discipline Court, and of numerous important institutions of the Kingdom of Saxony. The city government is administered by an overburgomaster, a burgomaster, a police director, about 25 magistrates, and some 75 councilmen. There are two municipal as well as other gas companies. The water works belong to the city. Since 1897 all the street railways have been electric. Among the many excellent hospitals the most prominent perhaps is St. John's, built in 1872. The municipal bakery is one of the features of the city. The environs, extremely attractive for their fine woods and meadows, are famous as having been the scene of the great battle of Leipzig (see LEIPZIG, BATTLES OF). The population of Leipzig in 1675 was about 20,000; in 1775, about 24,000; in 1800, about 32,000, in 1832, 43,189; in 1864, 85,394; in 1880, 149,081; in 1890, 357,122; in 1900, 456,124; in 1910 (census of December 1), 580,850. The area corresponding to the last figure is 79 square kilometers (over 30 square miles). Subsequent to the 1910 census suburbs were annexed, increasing the population (on the basis of that census) to 626,267. The population is overwhelmingly Protestant.

LEIPZIG, BATTLES OF. Leipzig was the scene of three noteworthy battles, two in the Thirty Years' War (q.v.) and one in the Napoleonic wars. 1. The first battle of Leipzig (or Breitenfeld, from the plain on which it was fought, about a mile from the city) was the first great battle in Germany of Gustavus Adolphus (q.v.). The Elector of Saxony, John George I (q.v.), was vacillating between the Imperial side and that of his fellow Protestants when Tilly (q.v.), the Imperial general, invaded Saxony and took Leipzig. The Elector closed an alliance with Gustavus, who on the 17th (old style 7th) of September, 1631, joined battle with Tilly. The Imperial army numbered about 44,000 men, that of Gustavus about 20,000, Swedes and Saxons. Tilly succeeded in routing the Saxon troops, but succumbed to the valor of the Swedes and to the genius of their commander. The Imperial army lost from 7000 to 10,000 men, while the loss on the part of the Protestant forces was about 2700, of whom only 700 were Swedish troops. The battle of Leipzig or Breitenfeld is important in military history as decisively demonstrating the superiority of mobility over weight in battle. More important still was its effect upon the progress of the Thirty Years' War. It was the first serious check which triumphant Catholicism had as yet encountered.

2. The second battle of Leipzig or Breitenfeld was won by the Swedes under Torstensson against the Imperialists, Oct. 23 (new style, Nov. 2), 1642.

3. The most celebrated of the battles around Leipzig was that fought between the French under Napoleon and an allied army of Austrians, Russians, Prussians, and Swedes under the supreme command of Prince Schwarzenberg, Oct.

16-19, 1813. It marked the triumphant issue of the Prussian War of Liberation, and is known as the Battle of the Nations from the number of nationalities that participated in the contest. German, Spanish, Italian, Portuguese, and Polish contingents fought in the ranks of the French army. At Dresden, on Aug. 26-27, 1813, Napoleon had won his last great victory in Germany, and this had been followed by a series of conflicts, Culm, Gross-Beren, and Katzbach among others, in which separate corps of the French army met with disaster. Napoleon took his last stand at Leipzig as the most favorable situation from which to threaten the individual armies that were converging on his position from Bohemia, Silesia, and the north. The disposition of the French forces on the first day of the battle was as follows: to the southeast of the town and at a distance of some four miles was the main force under Napoleon, numbering about 130,000 men, with 700 cannon, and stretching in a great semicircle between the villages of Markkleeberg and Holzhausen. The extreme right of the line was held by the Poles under Poniatowski, with the corps of Augereau and Oudinot in the centre, and Victor and Lauriston on the left. The Old and Young Guard and the cavalry under Murat and Latour-Maubourg were held in reserve. Napoleon directed the battle in person from the hillock of Wachau. To the west of the town was a force of 10,000 men under Bertrand at Lindenau, guarding the only line of retreat to France, and to the north 30,000 men under Marmont at Möckern, intended to prevent the junction of the Army of Silesia under Blücher and the Army of the North under Bernadotte with the main army of the allies advancing from Bohemia. Marshal Ney held the general command over the forces of Bertrand and Marmont. Schwarzenberg, who had 200,000 men at his disposal, made the costly mistake of directing an attack on Napoleon's extreme right, and for this purpose a force of 35,000 men was detailed to operate in the swampy ground to the west of the Pleisse in what turned out to be a veritable cul-de-sac, while at the same time the centre of the allies was greatly weakened. The battle began about nine o'clock in the morning of October 16 with a tremendous cannonade, which caused fearful havoc in both armies, owing to their compact formation. The fighting was desperate along the entire line. The village of Markkleeberg was taken four times by the Prussians under Kleist and retaken by Poniatowski; at Wachau the Russians under Barclay de Tolly fought with consummate courage, but after six charges were driven back with loss. An attempt to turn the French left likewise failed. Pursuing his advantage, Napoleon directed a fierce cannon fire against the enemy's centre, and followed this up with a charge of 8000 cavalry supported by the infantry corps of Victor and Lauriston. The French horse broke through the first lines of the enemy and advanced almost to the foot of the hill from which the Emperor Alexander and Frederick William III of Prussia were watching the progress of the battle. Here, however, the Cossacks and the infantry of the guard made a desperate stand, and the French, threatened besides by a renewed attack on their right, delivered by the Austrian troops, who had finally been recalled from their useless expedition to the other side of the Pleisse, retreated to their original position. Had Napoleon received reinforcements in time from Ney, the victory would

have been assured; but Ney, after dispatching one of Marmont's corps to the support of Napoleon, recalled it on becoming aware of the approach of Blücher, with the result that valuable time was lost in marching and countermarching, and this division was able to render aid neither to Napoleon nor to Marmont. The latter, who had now about 20,000 men at his disposal, was attacked in his position at Möckern by the superior force of Blücher, and after desperate fighting, in which the French lost 4000 men and the Prussians 5500, was compelled to retreat. At Lindenau Bertrand held his own against the Austrians under Gyulai.

On the 17th, a Sunday, there was no fighting except to the north of the town, where Blücher forced his way nearer to the town walls. Napoleon proposed an armistice to the Austrian Emperor, but received no answer from the allies, who were encouraged by Blücher's victory and expected to renew the contest on the following day with their forces increased to about 280,000 men by the arrival of a Russian army of 40,000 men under Bennigsen, two Austrian divisions under Colloredo, and the Army of the North under Bernadotte. Though all hope of victory was gone, Napoleon, whose forces after the arrival of Regnier amounted to about 150,000 troops, inexplicably neglected the opportunity to effect his retreat by the way of Lindenau, and contented himself with drawing his lines closer to the town, swinging his army slightly to the north so as to form a curve facing almost due east. To the north on his extreme left was Ney, between whom and Macdonald was the corps of Regnier with the Saxon troops, the centre was held by Victor, Lauriston, and Augereau, with the Old and the Young Guard and Murat's cavalry; on the right were the Poles under Poniatowski.

On the 18th the right and centre of the French held their own against the divisions of Colloredo, Kleist, and Wittgenstein, the fighting being especially obstinate around the villages of Probstheida, where Napoleon held command. The village of Stötteritz was bravely defended by Macdonald against the troops of Bennigsen. But on the left Ney could not hold out against the forces of Blücher, Bagration, and Bernadotte, and at a critical moment the Saxons in Regnier's corps stationed at Paunsdorf went over to the enemy. This was the turning point of the battle. Ney was forced to fall back on the town, in spite of reinforcements dispatched by Napoleon. The retreat, however, was stubborn, though in the face of a tremendous cannon fire, the village of Schönhof being taken and retaken seven times. With nightfall the French retreated into the city, hard pressed by the enemy. There was heavy fighting in the suburbs and at the gates far into the night, and the contest was resumed in the early morning of October 19. On the part of the French no adequate preparations had been made for effecting a safe retreat, and as division after division of the exhausted troops abandoned the defense of the town to join in the line of march, the streets of Leipzig became choked with fugitives, the only means of escape from the town being by a solitary bridge across the Elster. Owing to a misunderstanding of orders, this bridge was blown up by a French sergeant before the rear guard had crossed, and 15,000 men were left in the hands of the enemy. Large numbers were drowned in attempting to swim the Elster,

among these being Prince Poniatowski. At noon the allied monarchs made their entry into Leipzig. The losses of the allies in the battle are estimated at about 53,000 in dead and wounded, of which the Prussians lost 16,600, the Austrians 14,500, and the Russians 21,900. The French lost 15,000 in dead, 15,000 wounded, 25,000 prisoners, and 23,000 men left behind in the hospitals. The battle of Leipzig effectively shattered the power of Napoleon, and though his genius never shone more brightly than in his masterly retreat across Germany and his defense of the frontier of France, his fall had been rendered inevitable by the issue of this battle. Consult: Henri Jomini, *Life of Napoleon*, vol. iv (New York, 1864); Leopold Gerlach, *Die Schlacht bei Leipzig* (new ed., Leipzig, 1892); Friedrich Richter, *Historische Darstellung der Völkerschlacht bei Leipzig* (Hamburg, 1897); F. N. Maude, *The Leipzig Campaign, 1813* (London, 1908); Ernst Barkowsky, "Die Leipziger Schlacht und die Leipziger nach zeitgenössischen Berichten," in Albert Mundt, *Die Freiheitskriege in Bildern* (Munich, 1913).

LEIPZIG, COLLOQUY OF. An attempt in the first half of the seventeenth century to reconcile Lutherans and Calvinists. A conference was proposed by the theologians of Hesse and Brandenburg to those of Leipzig. The Elector John George of Saxony having sanctioned the plan of a private conference, the meetings commenced March 3, 1631, at the residence of the upper court preacher and, under his presidency, were held daily until March 23. The Confession of Augsburg (q.v.) was adopted as a basis, and every article examined separately. They agreed on articles V to VII and XII to XXVIII, but differed as to III, the Lutherans maintaining that not only the divine but the human nature of Christ possessed omniscience, omnipotence, etc., by virtue of the union of the two natures in His person, and that the glory which Christ received was only by His human nature; the Reformed theologians, on the contrary, denied that Christ, as man, was omniscient and omnipresent. On the tenth article they could not agree, the Reformed denying the physical participation in the body and blood of Christ in the eucharist, and asserting a spiritual participation by faith. On the article concerning election, the Reformed based election on the will of God, and reprobation on the unbelief of man, while the Lutherans regarded election as the result of God's prescience of the faith of the elect. The colloquy was conducted with ability and moderation, and showed that there was more unity between the two bodies than had been supposed, but no permanent political benefit resulted. Consult Schaff, *Creeds of Christendom*, vol. i (New York, 1881).

LEIPZIG, UNIVERSITY OF. After Berlin and Munich, the largest university of Germany, and next to Heidelberg the oldest within the limits of the present German Empire. It was established by the secession of the German students from Prague as one of the results of the Hussite agitation there. (See PRAGUE, UNIVERSITY OF.) The reorganization of that university in 1409 in favor of the Bohemian and at the expense of the German element led to the secession of the Germans, most of whom, with 40 teachers, accepted the invitation of Frederick the Quarrelsome of Meissen and his brother William and settled at Leipzig, establishing there a university modeled on that of Prague. Two colleges

or houses, the *collegium majus* and the *collegium minus*, were provided by the rulers, and the students were divided into four nations—Meissen, Saxony, Bavaria, and Poland. The humanistic movement here was early popular, and later the Reformation affected the university greatly, as it came under the influence of Melancthon about 1539. The promulgation of the statutes of 1559, which greatly lowered the standards of the institution, closed the period of prosperity, and the university changed little from that time till 1830. As a result, this was a time of almost entire stagnation. Since the thorough reorganization in the latter year, however, Leipzig has taken the high rank it now holds among the German universities. In 1909 the university celebrated its five hundredth anniversary. It had, in the summer semester of 1913, 5171 students in theology, law, medicine, and philosophy, the greater number being in law and philosophy. Besides a large number of university institutions, clinics, museums, collections, laboratories, and the like, there are a number of private institutes and clinics available for students. The library contains 570,000 volumes and 6000 manuscripts. A new governing body for the university, the *syndicate*, was established in 1893. Consult W. Bruchmüller, *Der leipziger Student, 1409-1904* (Leipzig, 1909), and F. Eulenberg, *Entwicklung der Universität Leipzig in den letzten hundert Jahren* (ib., 1909).

LEIPZIG INTERIM. See INTERIM

LEISEWITZ, Iŕze-vits, JOHANN ANTON (1752-1806). A German dramatic poet, born in Hanover. He went to Göttingen in 1770, to study law, and became a member of the circle of poets called Der Hainbund, which included Hölty, Stolberg, and Voss, and contributed two poems to the Göttingen *Musenalmanach* for 1775, both essentially dramatic and democratic in tone. In 1775, at Brunswick, and later at Berlin and Weimar, he met and soon counted among his friends Eschenburg, Mendelssohn, Lessing, Nicolai, Herder, and Goethe. His single complete play, *Julius von Tarent* (1776), an unsuccessful competitor for the now celebrated Ackermann-Schröder prize, was written in Lessing's style and quite in accord with the latter's dramatic technique. The play was a favorite of Schiller, and was frequently acted in Germany. His complete works with biography by Schweiger were published at Brunswick (1838). Consult: Eugene Sieske, *Die hamburger Preiskonkurrenz von 1775* (Brunswick, 1875); R. M. Werner, *Julius von Tarent und die dramatischen Fragmente von J. A. Leisewitz* (Heilbronn, 1889); G. Kraft, *J. A. Leisewitz* (Altenburg, 1894).

LEISHMAN, Iesh'man, JOHN G. A. (1857-). An American diplomat and iron manufacturer, born at Pittsburgh, Pa. After leaving a local Protestant orphan asylum he was employed by the Schoenberger Steel Company, where he thoroughly learned the details of the iron industry. He accumulated a considerable fortune, was the senior member of Leishman and Snyder, steel brokers, from 1881 to 1886, in the latter year was made vice president of Carnegie Brothers and Company, and in 1897 was promoted to the presidency of the reorganized Carnegie Steel Company. In the same year he retired from business and was appointed by President McKinley Minister to Switzerland. In 1900 he was transferred to Turkey. Possibly his most interesting diplomatic experience occurred when in 1904 he presented the demand

of the United States that American citizens and schools should have the same rights and privileges in Turkish dominions as were granted to certain favored nations, and that the American Minister should have direct access to the Sultan. He conducted the negotiations with tact and success. In 1906 his grade was raised to that of Ambassador. Leishman was transferred by President Taft to the more important post of Ambassador to Italy in 1909 and, in 1911, to that of Ambassador to Germany. At Berlin, where he remained until his retirement in 1913, he took a prominent part in the social life of the capital and departed from the custom of most American diplomats by appearing at state functions in elaborate court dress. One of his daughters married the Duke of Croy, and the other Count Louis de Gontant-Biron and afterward James Hazen Hyde (q.v.).

LEISLER, *lis'ler*, JACOB (?-1691). A character prominent in the history of Colonial New York. He was born in Frankfurt, Germany, and in 1680 came to New Amsterdam as a soldier in the Dutch West India Company's service. Leisler's importance in history is due to the part he played in New York affairs in the three years following the English revolution in 1688. On May 13, 1689, the New York militia, following the example of Massachusetts, which had imprisoned Andros, rose against Lieutenant Governor Nicholson, and the three royal councilors resident in New York seized the government for William and Mary and chose a committee of safety, at the head of which was Leisler, who was appointed commander of the fort. Leisler at once set vigorously to work putting the town in condition to resist an expected attack from the French. One of his acts was to construct a new half-moon battery on the spot which has since taken the name of the Battery. On December 9 a letter from the new government in England addressed to Nicholson, or, "in his absence, to such as for the time being take care for preserving the peace and administering the laws in the said Province of New York," was delivered to Leisler. Taking this letter as his authority, Leisler assumed the title of Lieutenant Governor, appointed a council, chose Jacob Milbourn as secretary, and proceeded to carry on the government partly in accordance with the old Dongan charter. A number of the most influential inhabitants, especially those who had held office under the Andros régime, opposed Leisler, and some of them fled to Albany, which for a time held out against his authority; but after the destruction of Schenectady (Feb. 19, 1690) by the French and Indians, submitted to him. Thus for a time he was supreme in the Colony, and some of his most violent enemies were imprisoned. In May, 1690, by his invitation, the first intercolonial congress that had ever assembled met in New York and planned an expedition against Canada, which, however, was unsuccessful. In January, 1691, Captain Ingoldsby, who sailed from England with Sloughter, the new Governor, but had been separated from him at sea, arrived in the Colony and, although his commission did not give him authority to act as Governor, demanded possession of the fort and of the government. With this demand Leisler refused to comply, and some blood was shed before Sloughter himself arrived in March. As soon as he was convinced of the new Governor's authority, Leisler surrendered; but, at the instigation of Leisler's ene-

mies, Sloughter convened a special commission of oyer and terminer, which condemned Leisler, his son-in-law Milbourn, and eight others to death. The prisoners were reprieved for a time, but at length Sloughter was prevailed upon to sign the death warrants of Leisler and Milbourn, and on May 11, 1691, they were hanged. Four years later, however, the son of Leisler prosecuted an appeal in England and succeeded in getting the confiscated estates restored and the bill of attainder reversed. But for many succeeding years the political life of the Colony was divided into the Leisler and the anti-Leisler factions. Consult: Hoffman, *The Administration of Jacob Leisler*, in Jared Sparks, "Library of American Biography," vol. xiii (Boston, 1844); vol. ii of the *Documentary History of the State of New York* (Albany, 1842-51); J. R. Brodhead, *History of the State of New York* (New York, 1853-71); "Documents relating to the administration of Jacob Leisler," in *Collections of the New York Historical Society for the Year 1868* (New York, 1868); Mrs. Schuyler Van Rensselaer, *History of the City of New York in the Seventeenth Century*, vol. ii (ib., 1909).

LEIST, *list*, BURKARD WILHELM (1819-1906). A German jurist, born at Westen, in Hanover. He was educated at Göttingen, Heidelberg, and Berlin; was made professor of civil law at Basel (1846) and later at Rostock (1847), whence he went to the University of Jena (1853). A pupil of Savigny, he combined the historical method with analysis, and after studies on the fundamental material of law, especially Roman law, made valuable researches in the hypothetical field of Indogermanic law. His more important writings are: *Die Bonorum Possessio, ihre geschichtliche Entwicklung und heutige Geltung* (1844-48); *Civilistische Studien auf dem Gebiet dogmatischer Analyse* (1854-77); *Mancipation und Eigentumsstradition* (1865); *Versuche einer Geschichte der römischen Rechtssysteme* (1850); *Der römische Erbrechtsbesitz* (1871); *Altarisches Jus Gentium* (1889); *Altarisches Jus Civile* (1892-96).

LEITÃO, *lâ-ê-toun'*, J. B. DA SILVA. See ALMEIDA-GARRETT, VISCOUNT OF.

LEITER, *lit'er*, JOSEPH (1868-). An American capitalist, born in Chicago. He graduated from Harvard University in 1891 and then was an agent for his father, Levi Zeigler Leiter, until 1898. In the autumn of 1897 he bought an immense quantity of wheat, causing the price of that commodity to double and affecting grain traders throughout the world. Ultimately, unable to maintain his corner, he lost more than \$10,000,000. He became president of the Zeigler Coal Company and of the Chicago, Zeigler, and Gulf Railway Company and director of other corporations.

LEITER, LEVI ZEIGLER (1834-1904). An American capitalist, father of Joseph Leiter. Born at Leitersburg, Washington Co., Md., he became a clerk in a country store; was employed in a store at Springfield, Ohio, in 1854-55; and then became an employee and later partner in the dry-goods firm of Cooley, Wadsworth & Co. at Chicago. In 1865 he and Marshall Field sold their interests in that firm and bought a controlling share of the dry-goods business of Potter Palmer, which became the firm of Field, Palmer and Leiter, and later Field, Leiter & Co. In 1881 Leiter sold his interest and retired from mercantile business to devote himself there-

after to large real-estate improvement schemes and to various corporate interests.

LEITH, lēth. An important burgh of Scotland, in Edinburghshire, on the Firth of Forth, 2 miles north of the city of Edinburgh, with which it is connected by a continuous line of houses, and of which it is the seaport (Map: Scotland, E 4). It is divided by the Water of Leith into two parts, North Leith and South Leith, and extends along the firth for more than 3 miles. Leith is irregularly built and dingy, especially in the older and central parts; but the Trinity House, customhouse, town hall, royal exchange, corn exchange, and banks are handsome buildings. The city has a government navigation school. West of the city is Leith Fort (1779), an important artillery station, and the fishing village of Newhaven is situated within the port boundaries. Leith combines with Edinburgh in the provision of water and gas, it maintains electric lighting, baths, a municipal lodging house, a fire brigade, slaughterhouses, and public parks. Leith is the chief seaport on the east coast of Scotland. The harbor extends by means of two piers upward of a mile into the firth and has a depth of about 25 feet at high water. There are six dry docks and an equal number of wet docks. The total water area of the docks and harbor is 80 acres. Railway communication is continued from the various Leith stations to the quays and even to the extremity of the western pier, and across the harbor by an iron swing bridge. The chief manufactures are ships, machinery, sailcloth, ropes, ale, rectified spirits, soap, bottles, and flour. The trade of the port is chiefly in colonial and foreign produce, but is also extensive in coal and iron exports. The city is especially important for its trade in whisky and its fishery interests. Grain, timber, and wine are . . . leading imports. A large part of the . . . trade is with Hamburg and Danish, Dutch, and Belgian ports. In 1900 imports and exports were valued at £12,931,781 and £5,297,991 respectively, in 1910, £13,559,655 and £6,970,509, in 1912, £16,531,420 and £8,106,811 (of which £7,929,078 domestic and £177,733 foreign and colonial). In the foreign and colonial trade the tonnage entered and cleared in 1900 was 2,037,700; in 1910, 3,220,683; in 1912, 3,406,614. Leith is an ancient town, and its history is largely connected with that of Edinburgh. It is first mentioned, in the charter of Holyrood Abbey (1128), as Inverleith. It early rose to commercial importance, the . . . industry dating from 1313. In 1511 it . . . a very monstrous Great ship, ye Michael," for James IV. It was walled and fortified in 1549. Some of the walls and a Saxon archway remain of the citadel built in 1650 by Oliver Cromwell's forces and destroyed after the Restoration. Pop, 1901, 77,439; 1911, 80,488. In population it is the seventh city in Scotland. Area, 1517 acres. Leith, with Musselburgh (pop., 1911, 15,486) and Portobello (11,037), is represented in Parliament by one member. Consult: R. H. Stevenson, *Annals of Edinburgh and Leith* (Edinburgh, 1839); J. C. Irons, *Leith and its Antiquities from the Earliest Times to the Close of the 19th Century* (2 vols., ib., 1898).

LEITH, CHARLES KENNETH (1875-). An American geologist. He was born at Trempealeau, Wis., and was educated at the University of Wisconsin (B.S., 1897; Ph.D., 1901), where he was assistant professor of geology

(1902-03) and thereafter professor. He served as an assistant geologist on the United States Geological Survey in 1900-05 and lectured at the University of Chicago after 1905 on pre-Cambrian geology. He is author of *A Summer and Winter on Hudson Bay* (1912) and *Structural Geology* (1913).

LEITHA, lit'a. A river of Austria-Hungary, an affluent of the Danube. It is formed by the junction of two little streams, the Schwarza and Pitten, near Neustadt, in Lower Austria, and flows in a northeasterly direction, separating (for a short distance) Austria from Hungary (whence their respective names Cisleithania and Transleithania). Passing into Hungary, the Leitha turns southeast and joins the Raab, a right-bank tributary of the Danube, at Altenburg. The total length of the river, from the source of the Schwarza, is over 110 miles.

LEITMERITZ, lit'mēr-its. An old town of Bohemia, Austria, on the right bank of the Elbe (which here becomes navigable), 45 miles north-northwest of Prague (Map: Austria-Hungary, D 1). It has a seventeenth-century cathedral, an episcopal palace with library, an old Rathaus (now used as a courthouse), an industrial museum, and a new Rathaus. The educational institutions include a higher Gymnasium, a training school for teachers, a school of theology, and a school for instruction in cultivation of grain and fruit. Leitmeritz has manufactures of glass, leather, chalk, bricks, cement, beer, and malt. There is a flourishing trade in wine, fruit, and hops. Pop, 1900, 13,075; 1910, 15,421.

LEITMOTIV, lit'mō-tēf' (Ger., leading motive). A term originated by Hans von Wolzogen and applied to the musical phrases which constitute the basic material out of which Wagner constructed his musical dramas. (See MUSICAL DRAMA.) Weber had used so-called *typical phrases* (q.v.), the object of which was to recall a similar situation. In the works of his second period (*Dutchman*, *Tannhäuser*, *Lohengrin*) Wagner makes extensive use of the typical phrase. The phrases characterizing the Dutchman, or *Lohengrin's* warning phrases, are heard repeatedly, but they undergo no organic changes, i.e., they are always literal repetitions, even if the instrumentation is varied. It was in Florence that Wagner first conceived the idea of expressing the chief personages and situations of his dramas by means of typical phrases. Any changes of states of the persons were to be represented by corresponding changes of the fundamental typical phrase. The whole music was to be thematically developed from these simple motives, which he thus very happily characterized as *leading motives*. Whereas the typical phrase recalled only similar situations, the leitmotiv characterizes, i.e., represents, essential qualities of persons, things, and even abstract thoughts. Wagner's genius for musical characterization enabled him to invent pregnant motives. Thus, he is enabled to give typical musical representations of individual persons (Siegfried, Hunding, Kundry), whole classes of persons (Mastersingers, giants, Nibelungs), forces of nature (storm, fire, forest sounds), mental states (Brünnhilde's ecstasy, pleading, Mime's plotting, Kundry's longing), general emotions (love, sympathy, compassion). From these latter it is but a step to the representation of symbolism (love potion, Tarn-helmet, Ring) and general abstractions (Wall-hall, fate, curse, grail). The leading motives do not occur as mere literal quotations, they un-

dergo vital changes, so as to adapt themselves to the most exacting demands of the dramatic situation. To produce these changes Wagner has recourse to all the technical devices known to musical art: change of harmony, rhythm, melodic intervals, diminution, extension, inversion, contrapuntal combination of two or more themes. Another important means to vary the expression or emotional character of the leitmotiv is the master's marvelous and unerring instinct for instrumental color. As an example, the following motive of the young Siegfried may be taken (Ex. 1). In *Götterdämmerung*, when Siegfried

(EX. 1)

has become a mature man, his motive is as follows—a form clearly evolved from the motive in *Siegfried* (Ex. 2). Compare also the following

(EX. 2)

variations of the *sword motive* (Ex. 3). The reader is also referred to the *Walhalla-motiv* as it first occurs at the opening of scene two in *Rheingold* and the form in which it appears in the closing bars of *Götterdämmerung*. Through this employment of the leitmotiv Wagner is enabled to attain perfect dramatic unity. Hence

ous motives from the beginning of *Rheingold*. Thus it is seen how the principle of the leitmotiv gives organic unity not only to a single drama but even to a whole cycle of dramas. For a full exposition of this subject, consult Richard Wagner, "Ueber die Anwendung der Musik auf das Drama," in *Gesammelte Schriften und Dichtungen* (10 vols., Leipzig, 1897), and H. T. Finck, *Wagner and his Works* (New York, 1898).

LEITNER, lit'nēr, GOTTLIEB WILHELM (1840-99). A German Orientalist, born at Pest, Hungary. His father, a German physician, becoming involved in the revolution of 1849, went to Turkey, where Gottlieb, who had been well instructed in the classics, learned Turkish, Arabic, and modern Greek. He also acquired English, French, and Italian at the British College in Malta and was interpreter to the English commissariat during the Crimean War. After the war he went to London, was naturalized as a British subject, and accepted an appoint-

ment as professor of Arabic and Mohammedan law in King's College (1861). In 1864 he was appointed director of a college at Lahore in the Punjab. He formed many societies, schools, public libraries, and colleges in India, and organized the Punjab University upon a solid basis. He also found time to engage in the exploration of

(EX. 3)

there are no closes or cadences within an act. The leitmotifs make their appearance one after another, are logically developed, run through every act until the climax is reached at the end of the drama. The final scene of *Götterdämmerung*, e.g., is absolutely unintelligible, unless the hearer has followed the development of the vari-

Tibet and the other countries to the north of the Himalayas and aroused interest in Dardistan and its languages. He extended his researches to the dialects of Kabul, Kashmir, and Badakhshan, and sent to the Vienna Exposition an extensive collection of Central Asiatic antiquities. He is said to have been able to speak,

read, and write 25 languages. His principal work, besides numerous contributions to the proceedings of learned societies in England and upon the Continent, was *The Languages and Races of Dardistan* (2 vols., 1867-71, 2d ed., 1877). Among other contributions made by him, there may be mentioned the *History of Dardistan, Songs, Legends, etc.* (1881) and the *History of Indigenous Education in the Punjab since Annexation* (1883). Consult J. H. Stocquelier, *Life and Labors of Dr. Leitner* (London, 1875).

LEITRIM, le'trím. A county in the Province of Connaught, Ireland, which to the north has a short coast line of 3 miles, on the Bay of Donegal (Map Ireland, C 3). Area, 619 square miles, half of which is pasture land. The soil is poor though crops of potatoes, oats, and hay are raised, and some coal is mined. Capital, Carrick on Shannon. The population, owing to a steady " " " " is constantly decreasing. 1841, 155,000; 1901, 69,200; 1911, 63,557, of whom more than 90 per cent are Roman Catholics.

LEIXNER-GRÜNBERG, liks'nēr-grün'bérk, OTTO VON (1847-1907). A German author. He was born at Saar, Moravia, studied at Graz and Munich, and in 1874-76 was on the editorial staff of the *Gegenwart*, at Berlin, and became well known as a critic of literature and art. He wrote *Illustrierte Litteraturgeschichte* (4 vols., 1879-82); *Gedichte* (1877), *Dammerungen* (1886), *Soziale Briefe aus Berlin* (1891); *Sprüche aus dem Leben für das Leben* (1895); *Die Ehrenten* (1901); *Zum Kampfe gegen Schmutz in Wort und Bild* (1904); *Geschichte der deutschen Litteratur* (7th ed., 1906). He also wrote several tales and the novel *Also sprach Zarathustras Sohn* (1897).

LEJEAN, le-zhān', GUILLAUME (1828-71). A French explorer and geographer, born at Plouégat Guérand, Finistère. He devoted himself to the study of Breton history, and in 1850 published *La Bretagne, son histoire et ses historiens*. He then took up the study of geography; traveled extensively in the Balkans (1857-58, 1867-70) and in Egypt and northern Africa (1860-61), was Consul in Abyssinia (1862-63) until driven out by King Theodore, with whom he had fallen into disfavor. He then traveled in western Asia (1865). He wrote: *Ethnographie der europäischen Türkei* (in Petermann's *Mitteilungen*, 1861); *Voyage aux deux Nils* (1865-68); *Théodore II, le nouvel empire d'Abyssinie et les intérêts français* (1865), *Voyage en Abyssinie* (1873). He published valuable maps of European Turkey and of the Nile. Consult Cortambert, *Lejean et ses voyages* (Paris, 1872).

LEJEUNE, le-zhēn', LOUIS FRANÇOIS, BARON (1775-1848). A French soldier and painter. He was born at Strassburg and served as a volunteer in the army of the Republic and as aid-de-camp of General Berthier in the Napoleonic wars. Most of his paintings were done from sketches made on the battlefield. These include: "Marengio" (1801), "Thabor" (1802), "Aboukir" (1804), "Lodi" (1804), "The Pyramids" (1806), "Somo-Sierra" (1810), "Moskova" (1812), and "Chiclana" (1824). Lejeune first introduced lithography into France, in 1806. After the July revolution in 1830, he became director of the Ecole des Beaux-Arts and the Ecole Industrielle of Toulouse. Consult the *Memoirs of Baron Lejeune*, translated by Mrs. Arthur Bell (2 vols., New York, 1897).

LE JEUNE, PAUL (1592-1604). A French Jesuit missionary, who in 1632 was sent to Canada by Cardinal Richelieu. In the same year he wrote a *Briève relation du voyage de la Nouvelle France* (1632), the first of the collection known as the *Relations des Jésuites en la Nouvelle France*. He became superior of the Jesuit house in Quebec, and edited every year from 1633 till 1639 a *Relation de ce qui s'est passé en la Nouvelle France* (Paris, 1634-40). On his return to France in 1640 he was made procureur of foreign missions. His narrative is included in R. G. Thwaites, *The Jesuit Relations* (Cleveland, 1896-1901).

LEKAIN, le-kān', HENRI LOUIS (1728-78). The stage name of Henri Louis Cain, a French tragedian. He was born in Paris, established a private theatre, and with Voltaire's help became popular, and finally appeared at the Théâtre Français through the intercession of Louis XV. His voice and figure were bad, but study greatly improved the former, and his sympathetic power soon won him great success and a place among the most famous French tragic actors. His *Mémoires* were reprinted in Paris, under the direction of Talma, in 1825.

LEKEU, le-kē', GUILLAUME (1870-1894). A Belgian composer, born at Heusy, near Verviers. After graduation from the conservatory at Verviers he went for further study to César Franck and Vincent d'Indy and won the second Prix de Rome with his lyric scene *Andromède*. His early works exhibit talent of a very unusual order, and through his untimely death Belgium was deprived of one who unquestionably would have risen to a place among her most distinguished composers. His works consist of two symphonic studies for orchestra; an orchestral fantasy on two folk songs of Angers; an adagio for cello and orchestra; a piano trio, a sonata for violin and piano; and a number of unfinished works in the larger forms. A string quartet was completed by D'Indy.

L. E. L. The initials and nom de plume of Letitia Elizabeth Landon, later Mrs. Maclean.

LELAND, CHARLES GODFREY (1824-1903). An American poet, journalist, humorist, and miscellaneous writer, born in Philadelphia, Aug. 15, 1824. Some years before his graduation at Princeton, in 1845, his precocious talent had found voice in short poems contributed to the newspapers. After graduation he studied at Heidelberg, Munich, and Paris, and was one of the American deputation to congratulate the French Provisional Government on the revolution of 1848, in the course of which he joined the students of the Latin Quarter behind the Paris barricades. In that year he returned to Philadelphia, studied law, was admitted to the bar in 1851, continued to write for periodicals, and soon devoted himself entirely to literary and journalistic work. He made a special study of the Gypsy language and history and attained much reputation both as a German scholar and as a portrayer of German and German-American life. Leland's widely read *Hans Breitmann's Ballads* (1871; many later eds.) tells, in the patois called Pennsylvania Dutch, many humorous conceits and droll adventures of their clownish hero. Leland himself was sometimes spoken of as Hans Breitmann. He wrote, however, under his own name. Leland's editorial work took him for a time to New York, but he returned to Philadelphia in 1855, and in 1861 established in Boston the *Continental*

Magazine, in which he pleaded for the emancipation of the slaves. He soon returned again to Philadelphia, however; traveled in the Middle West, and was from 1869 to 1880 resident chiefly in London, pursuing Gypsy studies. Returning to Philadelphia, he was active in furthering industrial-art education in the public schools, and wrote for this purpose several manuals, after his visit to the United States in 1880; but thenceforward he lived in Europe and he died in Florence, Italy, March 20, 1903. His published volumes comprise, among others: *The Poetry and Mystery of Dreams* (1855); *Meister Karl's Sketch Book* (1855), sketches of foreign travel; *Pictures of Travel* (1856), the first of his translations of Heine; *Sunshine in Thought* (1862); *Heine's Book of Songs* (1862); *Legends of Birds* (1864); *Hans Breitmann's Ballads*; *Hans Breitmann About Town and Other New Ballads*; *Hans Breitmann in Politics*; *Hans Breitmann and His Philosopher*; *Hans Breitmann's Party, with Other New Ballads*; *Hans Breitmann as an Uhlán* (1867-70). A complete edition of all the *Ballads* was issued in 1871, and many later editions have appeared. Other of Leland's writings include: *The Music Lesson of Confucius* (1870), philosophic verses; *Gaudeamus* (1871), humorous songs translated from the German; *Egyptian Sketch Book* (1873); *English Gypsies and their Language* (1873); *English Gypsy Songs* (1875, in collaboration); *Fu-Sang, or the Discovery of America by Chinese Buddhist Priests in the Fifth Century* (1875); *Abraham Lincoln* (1879); *The Minor Arts* (1880); *The Gypsies* (1882); *Algonquin Legends of New England* (1884); *Autobiographical Memoirs* (1893); *Songs of the Sea and Lays of the Land* (1895); *Hans Breitmann in Tyrol* (1895); *One Hundred Profitable Acts* (1897); *The Unpublished Legends of Vergil* (1899). His last work was a volume of Indian folklore verses (1903), called *Kulskap the Master, and Other Algonkin Poems*. This was done in collaboration with Dr. John Dyneley Prince. Consult E. R. Pennell, *Charles Godfrey Leland: A Biography* (2 vols., New York, 1906).

LELAND, JOHN (1691-1766). An English divine and Christian apologist. He was born at Wigan in Lancashire, became a Presbyterian minister in Dublin in 1716, and first appeared as an author in 1733 by publishing *A Defence of Christianity* in reply to Tindal's deistical work, *Christianity as Old as the Creation*. In 1739 appeared another apology, *The Divine Authority of the Old and New Testament Asserted against the Unjust Aspersions and False Reasonings of a Book Entitled "The Moral Philosopher"* (by Henry Morgan). He also attacked Henry Dodwell and Bolingbroke. His best work is *A View of the Principal Deistical Writers that have Appeared in England* (1754-56), which once held a high position in Christian apologetic literature. Consult Weld's memoir in Leland's *Discourses on Various Subjects* (4 vols., 1768-89).

LELAND, or LEYLAND, JOHN (c.1506-52). An English antiquary. After a thorough study of the ancient and modern languages at Christ's College, Cambridge, All Souls College, Oxford, and at Paris, he took holy orders, and in 1533 received from Henry VIII the unique office of King's antiquary. In this position he explored the antiquities of the various religious and educational institutions of the Kingdom, and visited every nook and corner of the country for the purpose of examining the topography as

well as the archaeological relics. Though a laborious historian, he was credulous and unsystematic. His principal works were: *A New Year's Gift to King Henry VIII in the 37th Year of His Raygne* (1546); *Commentarii de Scriptoribus Britannicis* (2 vols., 1709); *Itinerary of England* (1710-12); *De Rebus Britannicis Collectanea* (1715). Some of his autographic manuscripts finally made their way into the Bodleian Library, Oxford; others into the British Museum. His labors so overtaxed his mind that during the last two years of his life he was insane. Consult W. Huddesford, *The Lives of those Eminent Antiquaries: John Leland, Thomas Hearne, and Anthony à Wood* (Oxford, 1772), and Burton, *Life of John Leland (the First English Antiquary), with Notes and a Bibliography of his Works, including those in MS., printed from a hitherto Unpublished Work* (London, 1896). *His Itinerary in Wales*, 1536-39, was published in 1906.

LELAND STANFORD JUNIOR UNIVERSITY. A coeducational institution of higher learning at Palo Alto, Cal., founded by Leland Stanford (q.v.) and his wife, Jane Lathrop Stanford, in memory of their only child, Leland Stanford, Jr., who died in 1884. The grant of endowment was made in 1885, the corner stone of the first building was laid in 1887, and the university was opened to students in 1891. The original endowment consisted of about 90,000 acres of land in various parts of California, including the Palo Alto estate of some 9000 acres, constituting the site of the university; the Vina estate of 59,000 acres in Tehama County; and the Gridley estate of 22,000 acres in Butte County. By the will of Mr. Stanford the university received \$2,500,000, and after his death Mrs. Stanford deeded to it almost the whole of the residue of the estate, including the Stanford residence in San Francisco, making the total endowment more than \$25,000,000. The main part of the endowment included in the gifts of Mrs. Stanford consists of interest-bearing securities amounting to about \$17,000,000. The university was in part relieved from the taxation of its property through an amendment to the State constitution ratified in 1900. The university lies 33 miles southeast of San Francisco in the Santa Clara valley, its site covering about 9000 acres, affording views of the Bay of San Francisco and the Monte Diablo and Santa Cruz ranges. The architecture is a modification of the style of the old Spanish missions. The central buildings, of buff sandstone, with roofs of red tile, constitute two quadrangles, one surrounding the other, of which the inner, with the exception of the church, was completed in 1891. Its 12 one-story buildings inclose a court 586 feet long by 246 feet wide. The outer quadrangle, consisting in the main of two-story buildings, connected by an arcade, was begun in 1898. Among the 14 buildings of this quadrangle are the Assembly Hall, the temporary library, and buildings of the departments of science, engineering, economics, history, and English. The museum, chemistry building, dormitories, gymnasium, and university inn, a university commons leased and managed by students, occupy detached structures. The grounds about the university are reserved for experimental and ornamental purposes and for residences of the faculty. Considerable damage was done to the university buildings by the earthquake of April, 1906 (see SAN FRANCISCO

LELAND STANFORD JUNIOR UNIVERSITY

COURT OF INNER QUADRANGLE

A CORNER OF THE INNER QUADRANGLE

EARTHQUAKE), but none of the buildings of the inner quadrangle were injured. The four two-story corner buildings, the one-story physics building of the outer quadrangle, and the chemistry building have been largely rebuilt. The new unfinished library and gymnasium were wrecked, and are to be rebuilt in new locations. There was no injury to books, and very little to apparatus or collections, the architectural features suffering most. The Memorial Church, a structure of Moorish Romanesque architecture, and the Memorial Arch, decorated with a frieze designed by Saint-Gaudens, were completely wrecked, but the restoration of the Memorial Church was completed in 1914. In 1908 the properties and equipment of Cooper Medical College, in San Francisco, were transferred to the university, and with additions and a largely increased teaching force became the Medical School of the university.

The university maintains departments of Greek, Latin, Germanic languages, Romanic languages, English, philosophy, psychology, education, history, economics, law, mathematics, physics, chemistry, botany, physiology, anatomy, bacteriology, medicine, zoology, geology, and mining, and civil, mechanical, and electrical engineering. The Marine Laboratory at Pacific Grove, on the Bay of Monterey, is a branch of the biological department of the university. The degrees conferred are Bachelor of Arts, Master of Arts, Bachelor of Laws, Engineer, Juris Doctor, Doctor of Medicine, and Doctor of Philosophy. No honorary degrees are given. The degree of Bachelor of Arts requires the traditional four years, but the terms "freshman," "sophomore," "junior," and "senior" are not officially recognized, and the degree is conferred without regard to the time spent, whenever the requirements are met. Each student selects as his major subject the work of some one department, to which, together with the necessary minor subjects, he is required to devote about a third of his undergraduate course. All the rest of the undergraduate work is elective, but the professor in charge of the major subject acts as the student's educational adviser, and his approval is necessary for every subject registered. In the matter of entrance requirements the attempt has been made from the outset to insist upon an adequate preparatory training without prescribing particular subjects, and to recognize every subject that has an established place in the secondary school curriculum. The Law School offers a combined six years' course leading to the degrees of A.B. and J.D., the first year of the professional law course counting as the fourth year for the A.B. degree. The degree of Bachelor of Laws (without the A.B. degree) is granted on the completion of the professional three years' law course preceded by two years of general college studies. The degree of M.D. represents a combined eight years' course, the first year in medicine counting as the fourth year for the A.B. degree. The fifth medical year is to be spent in interne work in an approved hospital. The only prescribed requirement for admission is English, counting two units of the 15 necessary for full standing. For the remaining 13 units the student may offer the requisite number selected from a wide range of subjects, to which unit values are assigned. The attendance in 1914-15 was 1879. There were, in 1914, 264 graduate students, and the faculty, including teaching assistants, numbered 229. The li-

brary in 1914 numbered 230,000 volumes, including the medical library, Hopkins railway library, a valuable Australasian library, and a valuable collection of works on Germanic philology and literature. The Leland Stanford Junior Museum is the outgrowth of collections begun by the son of the founders. The control of the institution is vested in a board of 15 trustees appointed for 10 years. The president in 1914 was John Casper Branner, LL.D. Consult E. E. Slosson, *Great American Universities* (New York, 1910).

LELEGES (Lat., from Gk. Λελεγες). In the *Iliad*, a tribe in southwestern Troas, allies of the Trojans. In historic times the name seems to have been applied to a tribe allied to the Carians. Herodotus does not distinguish between the Leleges and the Carians; others declared that they inhabited the coast of Asia Minor north of Ephesus, while the Carians dwelt to the south. Philip of Theangela in Caria (fourth century B.C.) declared that the Leleges were slaves of the Carians. Owing probably to similarity in names, or possibly to dim reminiscences of historic events, a common Greek tradition identified the Leleges (and Carians) with the pre-Greek population of the islands and even the mainland. Some modern scholars use this name, like that of the Pelasgians, to denote the inhabitants of Greece and the islands in the Stone age and in pre-Mycenaean times. Consult: K. M. Deimling, *Die Leleger* (Leipzig, 1862); Wolf Aly, "Karer und Leleger," in *Philologus* (ib., 1908); K. J. Beloch, *Griechische Geschichte*, vol. i (2d ed., Strassburg, 1912-1913).

LELEUX, le-lē, ADOLPHE (1812-91). A French engraver and genre painter. He was born in Paris and began as an engraver and lithographer, but won distinction as a painter. His pictures represent scenes of life of the poor in Brittany, northern Spain, and Algeria, and in the streets of Paris during the revolution of 1848. He received the cross of the Legion of Honor in 1855. His "Portrait of the Author" and "The Command," a scene of the barricades of 1848, are in the Luxembourg.—His brother ARMAND (1818-85), born in Paris, studied under Ingres and in Italy, but turned his attention to genre painting. He had a finer appreciation of picturesque scenes than Adolphe and greater naturalness, but less power of expression. He received a first-class medal in 1859. The Luxembourg Museum contains his "Capuchin Pharmacy in Rome."

LELEWEL, lē-lēv-el, JOACHIM (1786-1861). A Polish historian, geographer, and numismatist, born at Warsaw. He studied at Vilna and became lecturer of history at the university in 1814. Public librarian and professor at Warsaw from 1818 to 1821, he returned that year to Vilna, to his old chair. In 1824 he was dismissed upon suspicion of being engaged in secret revolutionary proceedings and in 1829 was elected a member of the Polish Diet. He was prominent as a leader in the Polish insurrection of the next year, became a member of the national government, and after the failure of the uprising fled to France. He lived in Paris for two years and was then banished for participation in several Polish conspiracies. He went to Brussels and lived there in great privation. His writings are extensive and of high value. Among them are his *Numismatique du moyen-âge* (Paris, 1835); *Géographie des Arabes* (ib., 1851); *Géographie du moyen-âge* (Brussels, 1852-57); *His-*

tory of Poland (1829); *Regenerated Poland* (1836). His political writings in 20 volumes, entitled *Polaka*, appeared in Posen from 1853 to 1876.

LE LOCLE. See LOCLE, LE.

LELOIR, le-lwâr'. A family of French painters.—**JEAN BAPTISTE AUGUSTE** (1809–92), an historical painter, was born in Paris. He was a pupil of Picot and after travels in Italy exhibited at the Salon of 1835. His other early works were "St. Cecilia," "Ruth and Naomi," "Marguerite in Prison," "Young Peasants at the Foot of the Sacred Way," and "Homer," which was acquired by the state. A middle period was occupied by mural paintings in several Parisian churches. Later subjects were a portrait of Henri de Chennevières, "Daphnis and Chloë," "Joan of Arc in Prison," "The Magdalen at the Sepulchre," "Athenians at Syracuse," and "Rinaldo and Armida."

His son, **LOUIS ALEXANDRE** (1843–84), won the second Roman prize in 1861 after study in his father's atelier and at the Ecole des Beaux-Arts. His early works were religious subjects, but later he turned to genre and was an excellent painter of aquarelle. Among his paintings are: "Daniel in the Lion's Den" (Douai Museum), "Temptation of St. Anthony," "Grandfather's Birthday," "The Betrothal," "In his Cups," "The Game of Chess," and two other canvases and three aquarelles in the Metropolitan Museum, New York. Among his exquisitely painted aquarelles is "The Serenade," a fan belonging to the Baroness de Rothschild. He was one of the founders of the Society of French Aquarellists. His careful and spirited illustrations of Molière are also highly esteemed.

Another son, **MAURICE** (1853–), was the pupil of his father and brother. Besides designing illustrations, he painted, and exhibited at the Salon and the exhibits of the Society of Aquarellists: "The Marionettes" (1876), "Voltaire's Last Journey to Paris" (1878), "The Last Sheaf," "The Drink of Milk" (Metropolitan Museum, New York). He excels in depicting the life of the eighteenth century.

LELONG, le-lon', JACQUES (1665–1721). A French cataloguer, born in Paris. He studied at Malta and then in Paris. Afterward he was appointed librarian at the Oratorium of St. Honoré (1699). His reputation rests upon one book, *La bibliothèque historique de la France*, published in 1719 and enriched and republished in 1778. It is a catalogue of all books and manuscripts relative to the history of France and is of great importance to the student of French history. He also arranged a catalogue of all the editions of the Bible, *Bibliotheca Sacra* (1709 and 1723).

LE LOUTRE, le lō'tr', LOUIS JOSEPH (c.1692–c.1775). A French missionary to the Micmacs and vicar-general of Acadia. He was sent to Nova Scotia in 1740. Through the spiritual hold he gained upon the Indians he was enabled to direct their operations against the English forts and settlements; and when the country was taken by the British, he contrived by threats of excommunication, or of massacre by his Indians, to terrify the simple Acadians into remaining loyal to King Louis and covertly fighting for him after they had been subjects of King George for a generation. The misery he brought upon the people reached its climax when the long-suffering English government ordered their deportation (1755). The Abbé Le Loutre

had sought safety in flight at the surrender of Beauséjour, but he was coldly received by the Bishop and brethren at Quebec, and the ship in which he sailed for France was captured en route by the English, who held him prisoner for eight years in the isle of Jersey. On his release he returned to France and died in obscurity.

LELY, lê'lî, SIR PETER, properly **PIETER VAN DER FAES** (1618–80). A Dutch portrait painter, active chiefly in England. He was the son of Johan van der Faes, alias Lely, a captain of foot in the service of the States-General, and was born at Soest—authorities differ whether the town in Westphalia or the village near Utrecht is meant. A pupil of Pieter de Grebber at Haarlem, in 1641, he went to England in the train of William, Prince of Orange, where his portraits of the latter and his bride, Princess Mary, at Haigh Hall, made him well known. He remained in London, and in August, 1647, he painted the striking portrait of Charles I, as well as the double portrait of the King and Prince James while they were prisoners in Hampton Court—both portraits now in Syon House, Isleworth. His reputation and practice were great during the Commonwealth, when he painted the portrait of Cromwell (Pitti Gallery, Florence), and at the Restoration he was named court painter by Charles II. His fortune became such that he was able to advance large sums to King and Parliament. He painted the royal family, the royal mistresses and their children, ministers, and generals, was celebrated in the verses of Pope and other contemporaries, and Pepys in his diary speaks of him as "mighty proud and full of state." Until the arrival of Kneller (q.v.) he was without a rival. He was knighted in 1679 and died in London, Nov. 30, 1680.

Lely's early works are modeled on Van Dyck and are clear and warm in color, the hands being especially well drawn. In later life, when he had become popular, he employed assistants for the draperies and accessories, and his art degenerated. His color became cold and heavy, and his style mannered. He is chiefly famous for his portraits—the fair and frail beauties of the court of Charles II. His best-known work is the series of "Beauties," originally 11 in number, but now reduced to nine, painted for the Duchess of York. They are now at Hampton Court. Another well-known series is that of the "Admirals," 12 in number, painted for the Duke of York. Lely's portraits are best represented at Hampton Court, in the National Portrait Gallery, London, at Greenwich and Windsor, and in many English private collections. The Metropolitan Museum, New York, possesses his portraits of Sir William Temple and an interesting likeness of Nell Gwynne. Consult C. H. C. Baker, *Lely and the Stuart Painters* (2 vols., London, 1912).

LEMAIRE, le-mâr', (JEANNE) MADELEINE, née COLLE (1845–). A French flower, figure, and portrait painter, born at Sainte-Rosoline (Var). She was a pupil of her aunt, Madame Herbelin (a miniature painter), and afterward of Chaplin. Besides her portraits, her floral paintings and pastels are famous, and she made a great success at the Exposition of 1878 with her aquarelles. Among her best-known pictures are "Diana and her Dog" (1869), "Leaving Church" (1872), "Colombine" (1874), "Roses and Peaches" (1878), "Sermon during Mass" (1901), "Roses" (1903), "The

Sleep of Manon" (1906), "The Baths of Chloris" (1907). Among her well-known illustrations are those for Halévy's *L'Abbé Constantin*. Her style is brilliant, her execution correct and vigorous.

LEMAIRE DE BELGES, le-mâr' de bêlzh (1473-c.1525). A French poet, born at Belges or Bavay in the Low Countries (now French territory). An important representative of the early French Renaissance, he gives evidence of what the poetry of the time lacked, a lyric quality, but he is more concise and direct than his predecessors. He was in the service of Margaret of Austria and traveled much in Italy. He wrote the *Épître de l'amant vert*; *Le temple d'honneur et de vertus*; *Concorde des deux langues*; *Couronne margaritique*; and his greatest work, *Illustrations des Gaules et singularités de Troie* (1510-12). He was a precursor of Du Bellay and influenced Rabelais, Marot, and Ronsard.

LEMAÎTRE, le-mâ'tr', ANTOINE LOUIS PROSPER, known as FRÉDÉRIC (1800-76). A celebrated French actor, born at Havre, July 28, 1800. He was educated at the Conservatory, and in 1820 after acting at minor playhouses he appeared at the Odéon, but his fame began when in 1823 he created at the Ambigu the character of Robert Macaire in the melodrama of *L'Auberge des Adrets*. His vigorous and original genius soon made him the idol of the boulevards, where he was the leading attraction in a succession of theatres. To the conventional restraints of the Théâtre Français, however, he could not accommodate himself. He represented on the stage the extreme of the Romantic school. Besides his character of Robert Macaire, which gave the name to a new drama of which Lemaître was joint author in 1834, the record of his achievements includes *Trente ans ou la vie d'un joueur* at the Porte Saint-Martin in 1827, Dumas's *Kean ou désordre et génie*, at the Variétés in 1836, Victor Hugo's *Ruy Blas*, at the Renaissance in 1838, and *Don César de Bazan* and *Toussaint l'Ouverture* later at the Porte Saint-Martin. His last appearance was in 1873, and he died in Paris on Jan. 26, 1876. His career has recently been made the theme of a play by Clyde Fitch. Consult: *Souvenirs de Lemaître, publiés par son fils* (Paris, 1879); Duval, *Lemaître et son temps* (ib., 1876); De Mirecourt, "Frédéric Lemaître," in *Les contemporains* (ib., 1856); Lewes, *On Actors and the Art of Acting* (New York, 1878).

LEMAÎTRE (FRANÇOIS ELIE) JULES (1853-1914). An eminent French critic of the subjective Impressionist school. He was born at Vennezy (Loiret), Aug. 27, 1853, began his career as a teacher at Havre (1875-80), then taught at Algiers (1880-82) and Besançon (1882-83), and was professor at Grenoble (1883-84). He was already author of two volumes of verse and had published some essays and stories when he resigned his post and gave himself altogether to letters. He went to Paris and in three months won distinction by essays on Ohnet, Renan, and Zola. His *Impressions du théâtre* (10 vols., 1888-98) and *Contemporains* (7 vols., 1885-89) group his articles in two series that treat criticism as "a representation of the world, like other branches of literature, and hence by its nature, as relative, as vain, and therefore as interesting as they." This profession of literary faith shows Lemaître to differ from Brunetière,

much as Sainte-Beuve differed from Nisard in the preceding generation. His later critical work—studies of *Rousseau* (1907), *Racine* (1908), *Fénelon* (1910), and *Chateaubriand* (1912)—were first given to the public in lectures delivered at the Société des Conférences. The same unconventionality that is characteristic of Lemaître's criticism marks his plays, some of which have been notably successful: *Revoltée* (1889); *Député Leveau* (1891); *Marriage blanc* (1891); *Les rois* (1893); *Flipote* (1893); *L'Age difficile* (1895); *Le pardon* (1895); *La bonne Hélène* (1896); *L'Ainée* (1898); *La massière* (1905); *Bertrade* (1905); *La princesse de Clèves* (1905); *Le mariage de Télémaque* (1910), with Maurice Donnay. Lemaître also wrote a number of tales: *Sérénus* (1886); *Dix contes* (1889); *Myrrha* (1894), *En marge des vieux livres*, which appeared in 1905, 1907, and 1914; and he contributed to the *Journal des Débats*, *Temps*, *Figaro*, *Gaulois*, *Echo de Paris*, and (frequently) to the *Revue des Deux Mondes*. In 1895 Lemaître was elected to the French Academy, and in 1898 he founded, with François Coppée, La Ligue de la Patrie Française. He died Aug. 6, 1914.

LEMAN, lê'man, LAKE. See GENEVA, LAKE.

LE MANS, le män A city of France. See MANS, LE.

LEMAN'NUS, or **LEMAN'NUS**, LACUS. See GENEVA, LAKE.

LE MARCHANT, le mür'shän', JOHN GASPARD (1766-1812). An English soldier. Appointed ensign in the British army in 1781, he saw service at Gibraltar and in Flanders (1793-94). A favorite of George III, his promotion was rapid to the grade of lieutenant colonel in 1797. He drew up plans for military schools at High Wycombe and Great Marlow, which were adopted by Parliament. Later these schools were combined and removed to Sandhurst, where Le Marchant was lieutenant governor of the institution for nine years. Promoted to major general, he was appointed to a brigade of cavalry in the Peninsula in 1810. He participated in the capture of Ciudad Rodrigo in 1812, and later in the same year was mortally wounded while leading an especially brilliant and successful charge of his brigade at the battle of Salamanca.

LEMARE, lê-mâr', EDWIN HENRY (1865-). A celebrated English organist, born at Ventnor, Isle of Wight. In 1878 he won a scholarship at the Royal Academy of Music, where he studied the organ under Charles Steggall and composition under G. A. Macfarren. When only 19 he was elected a fellow of the Royal College of Organists. Having filled positions at Cardiff and Sheffield, he was appointed to Holy Trinity in London in 1892 and called to St. Margaret's in 1897. In 1902-04 he held the position of organist and director of music at Carnegie Hall, Pittsburgh, after which he returned to England. Subsequently he made several concert tours of the United States, where his art created such a deep impression that he was appointed official organist of the Panama Exposition of 1915. He composed several works for the organ, chief of which is a symphony in G minor, and made numerous transcriptions of orchestral works for his instrument.

LE MARS, lê mürz. A city and the county seat of Plymouth Co., Iowa, 25 miles north by east of Sioux City, on the Illinois Central and the Chicago, St. Paul, Minneapolis, and Omaha

railroads (Map: Iowa, A 2). It is the seat of Western Union College (United Evangelical) and has a Carnegie library. There is considerable trade with the surrounding farming and stock-raising region; and the industrial establishments include large flour mills and manufacturing of flour, blank books, drills, foundry and machine-shop products, brick, cigars, etc. Pop., 1900, 4146; 1910, 4157.

LEMAV, le-mă', LÉON PAMPHILE (1837-). A Canadian poet and novelist. He was born at Lotbinière, Province of Quebec, and was educated at the Quebec Seminary. He studied theology at the University of Ottawa, but was afterward called to the bar (1865), and in 1867 he became librarian to the Quebec Legislature, retiring in 1892 on a pension. He gained fame by his translation into French of Longfellow's "Evangeline" (1870). He was made a fellow of the Royal Society of Canada, and in 1908 contributed a poem on Champlain at the tercentenary celebration of Quebec. His publications include: *Essais poétiques* (1865); *Poèmes couronnés* (1870); *Les vengeancees* (1875); *De pelc- rin de Sainte Anne* (1877); *Fables canadiennes* (1881); *Petits poèmes* (1883); *L'affaire Sou- graine* (1884); *Rouge et bleu* (1891); *Les gou- telletes* (1904), sonnets. See CANADIAN LIT- ERATURE.

LEMBCKE, lēm'b'ke, CHRISTIAN LUDVIG EDVARD (1815-97). A Danish poet, born at Copenhagen. He studied theology, became rec- tor of a Latin school at Haderslev in 1850, and afterward settled at Copenhagen, where he opened another institution of the same kind. He wrote several poems, among which is the popular *Vort Modersmaal* (Our Mother Tongue), but he is best known by his translation of Shake- speare (18 vols., 1861-73; 3d ed., 1897-1900). He also translated Byron (2 vols., 1873-76).

LEMBERG, lēm'b'erk (Polish *Lwów*). The capital of the Crownland of Galicia, Austria, situated on the small stream Peltew, an affluent of the Bug, in a deep valley in a mountainous region, 212 miles by rail east-southeast of Cra- cow (Map: Austria-Hungary, H 2). In popu- lation it is the fourth city of Austria (after Vienna, Prague, and Trieste). It is composed of the small old town, and of the four suburbs which contain most of the prominent build- ings. The ramparts of the old town were replaced by promenades in 1811, but the city is equipped with a citadel. Lemberg is very rich in ecclesi- astical edifices. The chief among them are the Roman Catholic cathedral, built in Late Gothic style in 1350-1479 and adorned with frescoes; the Dominican church (1749), modeled after St. Peter's at Rome, and containing a monu- ment to the Countess of Dunin-Borkowska by Thorvaldsen; the Armenian cathedral (1437) in the Armenian-Byzantine style; the Greek Catho- lic cathedral (1740-79) in the basilica style; the Greek Catholic church of St. Nicholas (1292); the Roman Catholic church of St. Mary (1363); and the new synagogue. Lemberg has also eight monasteries and convents. The town hall, built in 1828-37, is surmounted by a tower 280 feet high and contains an industrial museum. Other prominent secular buildings are the hall of the Landtag (1877-81), the technical high school (1877), the palace of the Roman Catholic Archbishop, the theatre, the industrial museum, and the hospital. Prominent among the educa- tional institutions of Lemberg is the univer- sity. (See LEMBERG, UNIVERSITY OF.) The

most noteworthy of the other educational insti- tutions are the royal technical high school (one of the six in Austria), with an attendance of about 1700 in 1911, five Gymnasias, two theologi- cal seminaries, a school of agriculture and for- estry, a normal training school, and several special schools. The Ossolinski National Insti- tute, with over 180,000 volumes, contains col- lections of Polish historical and literary antiq- uities, portraits, and coins. The municipal mu- seum has art and industrial collections, and the Dzieduszycki Museum is important to the stu- dent of ancient Galicia. In the Skarbek Theatre Polish-Italian operas are sung and Polish dramas performed.

Lemberg is the seat of the chief economic or- ganizations of the crownland, and of archbishops of the Roman Catholic, Greek Catholic, and Ar- menian Catholic churches. It has large banks and commercial institutions. The transporta- tion facilities include an electric railway. Lem- berg manufactures farm machinery, boilers, various other iron products, musical instruments, brick, spirits, kerosene, candles, flour, etc. The trade, very extensive during the Middle Ages, was almost entirely destroyed by the fall of Poland. Within recent years the transit trade has somewhat recovered. The chief articles of commerce include agricultural products and some iron manufactures. The important fair of the three Kings is held every January. The de facto population of the commune in 1900 was 159,877, in 1910 (census of December 31), 206, 113. Of the latter number, 105,469 were re- turned as Roman Catholics, 39,314 Greek Catho- lics, and 57,387 Jews. The vernacular of 85.8 per cent of the population in 1900 was Polish (76.8 in 1900), 10.8 per cent Ruthenian, and 2.9 German (13.0 in 1900). The foundation of Lemberg is usually attributed to the Ruthenian Prince Daniel, who (about 1259) built it for his son Leo, in whose honor it was named (*Leopo- lis*). Captured by Casimir the Great in 1340, it received Magdeburg rights and greatly increased in importance under the Polish rule. It received many German colonists, and for two centuries the German language was used in its public records. It was the capital of a Polish prov- ince from 1432 to 1772, when it passed to Aus- tria. In 1648 and 1655 it was besieged by Cossacks under Chmielnicki, and in 1672 by the Turks. It was captured by Charles XII of Sweden in 1704, and in 1848 was bombarded.

At the outbreak of the European War, in 1914, Russia began an offensive movement against Austrian Galicia. Her battle line extended over a front of about 400 miles. After a month of severe fighting, the Russians under General Ruzsky first occupied heavily fortified positions before Lemberg, and then entered the city itself a few days later, which they subsequently forti- fied. It is estimated that the Austrians lost 25,000 men, 2000 cannon, and a year's provi- sions. Civil government was set up. This victory gave the Russians complete mastery of eastern Galicia. See WAR IN EUROPE.

LEMBERG, UNIVERSITY OF. The third in size of the Austrian universities. As the centre of the Polish learning in Austria, it is a great factor in the Polish national movement, and its lectures, formerly given in German, are now all or nearly all in Polish. It was founded in 1784 by Emperor Joseph II, reorganized in 1817, and began to flourish especially after 1850. It has faculties of theology, law, and philosophy,

besides instructors in medicine. Its library, founded in 1784, contains 232,272 volumes. Its budget for 1913 was 1,248,000 crowns, and the number of students 5186.

LEMER, le-mâr', JEAN BAPTISTE RAYMOND JULIEN (1815-93). A French author and publisher. He was born at Rochefort and studied in Paris. He was a notary's clerk and then worked in a department of the Ministry of Marine (1841-44). In 1848 he began to write for *La Semaine*, *La Liberté*, and *Le Courrier Français*, and soon after founded *La Sylphide* (1853) and *La Lecture* (1848). Under pseudonyms and his own name he published the erotic collections, *Poètes de l'amour* (1850) and *Lettres d'amour* (1852); *Le crime du 18 mars* (1871), *Le moulin de malheur* (1885); *Balzac, sa vie, son œuvre* (1891).

LEMERCIER, le-mâr'syâ'. A family of French architects.—**PIERRE** began work on St. Eustache, Paris, on Aug. 19, 1532, and on Sept. 25, 1552, he received the commission to complete the high tower of the church of St. Maclou at Pontoise. He was succeeded as architect of both these buildings by his son **NICOLAS**, who constructed the nave of St. Eustache in 1578-80.

JACQUES LEMERCIER (1583-1654), probably the son of Nicolas, was one of the remarkable group of architects who, under Louis XIII, transformed French architecture under the influence of new neoclassic ideals. A contemporary of De Brosse, Leveau, and François Mansart (q.v.), he was by far the most prolific and capable designer of his time. After a period of study in Rome he came under the notice of Louis XIII and of Cardinal Richelieu and was employed upon many works of capital importance. For the Cardinal he built the Palais Cardinal, afterward known as the Palais Royal, which was begun in 1629. It has been greatly altered in later times. For the Cardinal he also built the castle and laid out the town of Richelieu, a design of colossal scale, never completed. For the King he began in 1624 an extension of the Louvre, doubling the original court. In this he showed his good taste and restraint by duplicating the ordonnance of Lescot (q.v.) and Gonjon to the north of a new central pavilion, the Pavillon de l'Horloge. Similar self-effacement was shown in his continuing unchanged Mansart's unfinished design for the Val de Grâce, a conventual votive church. His finest works were two churches in Paris—the Sorbonne, begun in 1635, attached to the college of that name begun by him in 1629, and the Oratoire, now a Protestant church on the Faubourg St. Honoré; the first named being the earliest domical church completed in France. His alleged share in the early works at Versailles is mythical, and how far he is responsible for the plan and interior of the fine church of St. Roche is not clearly determined. The imposing open-air stairway of the Cour du Cheval Blanc at Fontainebleau is his work, besides a large number of châteaux and churches of considerable importance.

LEMERCIER, le-mâr'syâ', JEAN LOUIS NÉPOMUCÈNE (1771-1840). A French dramatist and poet, born in Paris. Among the more noted of his dramas are *Tartufe révolutionnaire* (1795), *Agamemnon* (1797), *Ophis* (1798), *Charlemagne*, *Baudoin*, *Saint Louis*, names that suggest classic and historic subjects. He was, however, a reformer a little before the due time, preferring Shakespeare to Racine and making

experiments in stage naturalism, among them an imitation of the storm scene in *The Tempest*. He is interesting solely as a forerunner of the Romantic drama. His poems (*Panhypocrisiade*, 1819; *Les âges français*, and others) are of slight worth. Consult Vauthier, *Essai sur Lemerrier* (Paris, 1886).

LEMERRE, lê-mêr', ALPHONSE PIERRE (1838-1912). A French publisher, born at Canisy. At the time when publishers were publishing cheap books Lemerre was bold enough to depart from this policy and to give to the public beautiful editions of the best authors. He published in this way the *Collection des classiques français* and other collections. These were printed on de luxe paper with wide margins and had distinctive covers. Lemerre's motto *Fac et spera* became well known. The editor of the Parnassian school (see **PARNASSIENS**, **LES**), Lemerre counted as his friends the greatest poets of that group. In later life he published the works of Anatole France, Marcel Prévost, Paul Hervieu, Paul Baudouin, and other leading writers; also the *Bibliothèque contemporaine* and the *Petite bibliothèque littéraire*.

LEMERY, lâ-m'rê', NICOLAS (1645-1715). A French chemist. Born at Rouen, he studied under Christophe Glaser at Paris, lectured at Montpellier, and then became a pharmacist in Paris. In 1683 he was obliged to flee to England on account of his Calvinistic principles; but, abjuring this faith in 1686, he was permitted to return to Paris, where he reopened his pharmacy and thereafter lectured on chemistry as an experimental science. His *Cours de chimie* (1675, 13th ed., 1715) was long a standard work. He is also author of *Pharmacopée universelle* (1697); *Dictionnaire universel des drogues simples* (1698); *Traité de l'antimoine* (1707); *Recueil nouveau des secrets et curiosités les plus rares* (1709).

LEMIEUX, le-myê', RODOLPHE (1866-). A Canadian lawyer and statesman. Born in Montreal, he was educated at Laval University and was called to the bar in 1891. Entering politics, he was a Liberal member of the House of Commons for Gaspé in 1896-1911 and was afterward elected for Rouville. He was Solicitor-General in the Laurier cabinet (1904-06), Postmaster-General (1906-11), and Minister of Marine and Fisheries from August to October, 1911. In 1907 he was special envoy to Japan concerning Japanese immigrants to the Dominion (see **CANADA**, *History*) and in 1910 represented Canada at the opening Parliament of the Union of South Africa. He received the French decoration of the Legion of Honor (1906) and became a fellow of the Royal Society of Canada (1908). At Laval University he was appointed professor of the history of law. He published *De la contrainte par corps* (1896) and *Les origines du droit Franco-Canadien* (1900).

LEMIRE, le-mêr', JULES AUGUSTE (1853-). A French priest and deputy. Born at Vieux-Berquin, he was educated at the College of Saint François d'Assise, Hazebrouck, where he was professor of philosophy and rhetoric from 1878 to 1893. In the latter year he was elected to the Chamber of Deputies, to which he was re-elected in 1898, 1902, and 1906. Interested in social reform, he supported the programme of the Christian Socialists, and in 1897 he founded the league known as the Cœur de Terre et du Foyer, whose object was to procure a piece of land for every French family. He became hon-

orary canon of Aix in 1897 and of Bourges in 1900. His writings include: *Le Cardinal Manning et son action sociale* (1889); *D'Irlande en Australie* (1892); *Que feront les religieuses?* (1903).

LEMMA (Gk. λήμμα, *lēmma*, a thing received, taken for granted, from λαμβάνειν, *lambanein*, Skt. *labh*, *rabh*, to take). In mathematics, a proposition introduced for the purpose of proving another proposition, but not otherwise connected with the general sequence. For example, in treating propositions on collinearity in geometry, in order to prove Pascal's "mystic hexagram" theorem, "The opposite sides of a hexagon inscribed in a conic intersect in three collinear points," it is convenient to approach the proposition through a theorem due to Carnot: "If a circumference intersects the sides a , b , c of a triangle ABC , in A_1 and A_2 , B_1 and B_2 , C_1 and C_2 , respectively, then

$$\frac{AC_1}{C_1B} \cdot \frac{BA_1}{A_1C} \cdot \frac{CB_1}{B_1A} \cdot \frac{AC_2}{C_2B} \cdot \frac{BA_2}{A_2C} \cdot \frac{CB_2}{B_2A} = 1."$$

This latter theorem might, in this treatment of collinearity, be called a lemma. The word is not, however, much used at present, lemmas not being distinguished by name from other propositions in a sequence.

LEMMENS, lēm'ens, NICHOLAS JACQUES (1823-81). A celebrated Belgian organist and composer, born at Zoerle-Parwys. At the age of 11 he began to study the organ with Van der Broeck. From 1841 to 1845 he was a pupil of Fétis at the Brussels Conservatory, which he left as the winner of the first prize in composition and organ playing. In 1846 he went to Breslau, where he studied organ for one year with A. Hesse. After his return he was appointed professor of organ playing at the conservatory in Brussels in 1849. His success as a teacher was extraordinary, and he exerted a far-reaching and lasting influence. In 1879 he established an organ school in Malines, which soon acquired a European reputation. He died at Castle Linterport, near Malines. He wrote several symphonies and masses and a great deal of liturgical music; but his most important works are his compositions for organ, which belong to the standard repertory of every organist.

LEMMING (Norw., Swed., Dan. *lemming*, perhaps from Norw. *lemja*, to maim, but more probably from Lapp *loumek*, *lummik*, lemming). 1. A vole, or short-tailed rat (*Myodes*, or *Lemmus*, *lemmus*), of the subfamily Arvicolinae, inhabiting the central mountain chain of Norway and Sweden. Lemmings are about 5 inches long and yellowish brown, marked with darker spots; and their food consists largely of birch shoots, mosses, grass roots and stalks, etc. In winter they form long galleries under the snow in their wanderings in search of food. They make a nest in some sheltered place out of dry grass and hair, and there the young are born, two broods annually, with about five at a birth.

The circumstance which has made the lemming famous is its so-called "migration," the cause of which has never been satisfactorily explained. At intervals, ranging from 5 to 20 or more years, lemmings suddenly appear in enormous numbers in cultivated districts of Norway and Sweden, where ordinarily they do not occur, traveling seaward and not deterred by any obstacle. They swim the streams and lakes which may lie in their path and keep per-

sistently onward, until finally the survivors reach the sea, into which they plunge and so ultimately perish. During this migration all sorts of predatory animals follow in their wake, feasting on the unusual abundance of food, while men also slaughter them, as the damage they inflict on cultivated fields is serious. (See Plate of GOPHERS.) 2. Besides the Norwegian lemming, several related animals are given the same name. One of these (*Myodes obensis*) inhabits the Arctic regions of both hemispheres and is very abundant in northwestern America. It is bright rusty brown in color and is not known to make migrations. Another species (*Myodes schisticolor*) inhabits Siberia and is plain slate gray. A closely related animal, the banded lemming or hare-tailed rat or mouse, is *Cuniculus torquatus*; it is found in the Hudson Bay country and Greenland and is remarkable for turning white in winter. The "false" lemming represents a third nearly related genus, the single species of which, *Synaptomys cooperi*, occurs from Indiana and Kansas northwestward to Alaska. Other American rodents known as lemmings are *Lemmus trimucronatus* and *Dicrostonyx richardsoni*. For these American mice, consult Preble, "A Biological Investigation of the Hudson Bay Region," in *North American Fauna*, No 22 (Washington, 1902), and other publications in the same series.

LEMNIAN EARTH. A soft, yellowish-gray, hydrous aluminium silicate that is found in amorphous masses on the island of Lemnos, now Stalimene. It was valued as a medicine among the ancients, who stamped it with the head of Diana, the tutelary goddess of Lemnos, whence it acquired the name of *terra sigillata* (sealed earth), and was used as an antidote for poison and the plague. It corresponds to the mineral cimolite.

LEMNISCATE (Neo-Lat. *lemniscata*, from Lat. *lemniscatus*, ribboned, from *lemniscus*, from Gk. ληνίσκος, *lēmnikhos*, ribbon, from λήνος, *lēnos*, wool). A curve defined as the locus of a point which moves so that the product of its distances from two fixed points is constant and is equal to the square of half the distance between these fixed points. It may also be defined as the locus of the intersection of the normals from the origin with the tangents to a hyperbola. If the

LEMNISCATE.

equation of the hyperbola is $x^2 - y^2 = a^2$, i.e., if we take an equilateral hyperbola, the equation of the lemniscate is $(x^2 + y^2)^2 = a^2(x^2 - y^2)$. The lemniscate is a special case of the Cassinian oval (q.v.), and its shape resembles that of the figure 8. Its polar equation is $\rho^2 = a^2(\cos^2\theta - \sin^2\theta) = a^2\cos 2\theta$. The curve is symmetric with respect to both coordinate axes, is tangent to the asymptotes of the hyperbola at the origin, lies between the lines $x = -a$, $x = a$,

and is of the fourth order and of the eighth class. (See CURVE.) The lemniscate was invented by Jakob Bernoulli (*Acta Eruditorum*, 1694). Fagnano (1750) discovered its principal properties, but the analytic theory is due chiefly to Euler.

The curves obtained by tracing the loci of the intersection of the normals from the origin with the tangents of curves, other than hyperbolas, are also sometimes called lemniscates; e.g., the curve resulting in case the ellipse is taken as the base is called an elliptic lemniscate. For an extensive bibliography of the lemniscate, consult Brocard, *Notes de bibliographie des courbes géométriques* (Bar-le-Duc, 1897).

LEMNIUS, lēm'nī-ŭs, SIMON (c.1510-50). A German humanist, whose real name was Simon Lemm Margadant, from this family name he was sometimes called Emporicus or Mercatorius. He was born at Münsterthal, studied probably at Munich and in Italy, and under Melanchthon at Wittenberg. His earliest work, published at Wittenberg in 1538, *Epigrammaton Libri Duo*, united invective against many of Luther's followers with eulogy of Luther's enemy, the Archbishop and Elector Albrecht. Lemnius had to leave Wittenberg but in 1538 he published, probably at Halle, a third book of *Epigrammata*. This was answered by Camerarius' *Elegiæ 'Odonomachia'*, and that in turn by an *Apologia* from Lemnius (1542). But his bitterest attack was in the poem *Latit Prætor Jurenalis Monachopornomachia*, which is of uncertain date. In 1540 he was appointed teacher in the new Nikolaischule at Chur, where he died in 1550. His writings, besides those already mentioned, are *Bucolicorum Eclogæ Quinque* and *Amorum Libri Quatuor* (1542); *Homeri Odyssea Heroico Versu Facta, Accedit Batrachomyomachia* (1549); a version in Latin of Dionysius' *Periegesis* (1543); and a *Rhætica*, printed first in 1874. Consult: Lessing, *Kritische Briefe* (Berlin, 1753); G. T. Strobel, *Neue Beiträge zur Litteratur* (Nuremberg, 1792); Plattner, in his edition of the *Rhætica* (1874).

LEMNOS (Gk. Λήμνος; modern *Limnos*). One of the four Thracian islands in the Grecian Archipelago, about 40 miles west of the entrance to the Dardanelles (Map: Greece, G 3). It is irregular in shape, and is divided into two nearly equal parts by two deep bays—Port Paradise on the north and Port St. Anthony on the south. The area is 150 square miles, the population, according to Baedeker, in 1914 was about 30,000. It is hilly, though there are some fertile valleys, rather bare of wood, but produces grain, tobacco, and fruits. There is good pasture ground for sheep. The inhabitants are peaceable and prosperous. The island has been for some time used as a place of exile for political offenders in Turkey. The principal product of Lemnos was formerly the Lemnian earth (q.v.), used in ancient and mediæval times as a cure for festering wounds and serpent bites, and until recently highly valued by both Turks and Greeks, but the ceremonies with which the earth was extracted have been discontinued, and even the knowledge of the earth is likely to be forgotten. The chief town, Kastro (on the site of the ancient Myrina, on the west coast), has a population of about 4000. It has a good harbor, and controls all the trade of the island. It furnishes excellent sailors. Owing to its situation, Lemnos long remained but little influenced by the Greeks. If we may judge from an inscription

found on the island, the pre-Hellenic population was akin to the Etruscans. It was conquered for Athens by Miltiades, tyrant of the Chersonese, occupied by the Persians, and again seized by the Athenians along with Imbros and settled by Athenian colonists. The island was of great importance to Athens, as its possession secured control of the trade from the Black Sea, and it was recognized as Athenian territory by the Peace of Antalcidas. During the Hellenistic and Roman periods the island was not prominent. Later it continued under the rule of the emperors of Constantinople until the capture of that city by the Latin crusaders, when it passed under the control of the Genoese princes of Mitylene. Later it fell into the hands of the Venetians, and in 1478 was surrendered to the Turks. The two chief cities in ancient times were Myrina (now Kastro) and Hephæstra. The latter was situated on the east coast, at a place now deserted, near Palæokastro. Its once fine harbor is now filled up. The ancient writers speak of the island as volcanic and of Mount Moschylos, one of its mountains, as active, and the place was a centre of the worship of Hephæstus. At present there seem to be no evidences of volcanic action, and it is probable that the volcano has sunk in the sea and is now represented by a shoal off the eastern coast. For a famous story connected with the island, see HYPISYPYLE, for another, see PHILOCTETES. Consult: A. Conze, *Reisen auf den Inseln des thrakischen Meeres* (Hanover, 1860); H. F. Tozer, *Islands of the Ægean* (Oxford, 1890); De Launay, *Chez les Grecs de Turquie* (Paris, 1897); C. Frederich, in *Kaiserlich Deutsches Archæologisches Institut, Athensche Abteilung, Mitteilungen*, vol. xxxi (Athens, 1906).

LE MOINE, le mwān. An alternative spelling of the name of several French-Canadian pioneers. See LE MOYNE.

LEMOINE, EMILE MICHEL HYACINTHE (1840-1912). A French mathematician, born at Quimper (Finistère). He was educated at the Ecole Polytechnique, taught for a time, and in his later years was connected with the gas department of Paris. He was one of the founders (1871) of the Société Mathématique de France and established the journal known as *L'intermédiaire des Mathématiciens* (1894). His name is associated with the modern geometry of the triangle, his contributions to the subject having begun in 1873 in his paper "Sur quelques propriétés d'un point remarquable d'un triangle," read before the Association Française pour l'Avancement des Sciences at Lyons.

LE MOINE, SIR JAMES MACPHERSON (1825-1912). A Canadian author and naturalist, born in Quebec. He was educated at Le Petit Séminaire de Québec, and was admitted to the bar in 1850. In 1847 he entered public service as collector of inland revenue at Quebec and in 1869 he became inspector. His writings on early Canadian history gained him a reputation for carefulness of research and for impartiality. He devoted much time to the study of natural history, particularly ornithology, and his contributions in this field also acquired more than ordinary reputation. He was knighted in 1897. His many publications include: *L'Ornithologie du Canada* (1860); *Legendary Lore of the Lower Saint Lawrence* (1862); *Les pêcheries du Canada* (1863); *Maple Leaves* (1863-64); *The Tourist's Note Book* (1870); *Quebec, Past and Present* (1876); *The Scot in New France* (1879);

Chronicles of the Saint Lawrence (1879); *Picturesque Quebec* (1882); *Monographies et esquisses* (1885); *Canadian Heroines* (1887); *Birds of Quebec* (1891); *Legends of the St. Lawrence* (1898); *Annals of the Port of Quebec* (1900); *Maple Leaves* (1906). See CANADIAN LITERATURE.

LEMOINNE, le-mwän', JOHN EMILE (1815-92). A French editor and publicist, born in London, Oct. 17, 1815. He was educated first in England, then in France, and employed in the Ministry of Foreign Affairs. In 1840 he became editor of the *Journal des Débats* and held the post for more than half a century, writing especially on foreign politics and English institutions. He displayed great satiric powers. He became an Academician in 1875 and life member of the Senate in 1880. His numerous publications were of ephemeral interest. He died in Paris, Dec. 14, 1892.

LEM'ON (older forms also *lemmon*, *limon*, *lemond*, from Fr. *limon*, ML. *limo*, from Ar. *limūn*, from Pers. *limūn*, *limū*, lemon), *Citrus medica limonum*, or *Citrus limona*. The common lemon tree or its fruit. The tree is irregular, inclined to make long leaders, clothed sparsely with foliage, and of an average height of 10 to 20 feet. The flowers are purplish on the outside, and their fragrance is less marked and agreeable than that of the orange. The fruit is botanically a berry, ellipsoidal in form, and usually knobbed at the apex or distal end; it is of a light yellow color, and its rind is well charged with oil glands carrying an abundant store of oil. Lemon oil, or extract, is extensively derived from this source, either by expression or distillation, the former process being the common one. The pulp of the lemon is light-colored and well charged with a juice of agreeable flavor, which is mainly due to the citric acid. Aside from its use for making lemonade, it is much used by calico printers to discharge colors, to produce greater clearness in the white part of patterns dyed with dyes containing iron. Citric acid and lemon juice are also made from it in commercial quantities.

The lemon is found wild in India, from whence it was early transported by the Arabs. It reached Europe probably not earlier than the Crusades. It is now extensively cultivated in Italy and the adjacent islands, in Spain and Portugal. In the United States it is planted in Florida and California, but, as it is less hardy than the orange, it is confined to a more restricted area. Since the severe freeze of 1894-95 lemon culture in Florida has been almost entirely transferred to the southern frost-free counties of the State. The soil here is less suited to the plant, and greater skill in mulching and fertilizing is necessary. Orchards are usually planted with trees grown from the bud on the sour orange as a stock, although *Citrus trifoliata*, recently named *Poncirus trifoliata*, can be used. The lemon grows from cuttings, as do the lime and citron. The orchard treatment is the same as for the orange (q.v.). The lemon is very different from the orange in its habit of growth, being more inclined to assume the character of the pear, producing long branches with the fruit at or near the extremity. Close attention to heading-in is therefore a necessity in order to insure the fruit against injury and loss by the wind, as well as for ease in gathering the product.

Since the lemon naturally ripens in winter,

since fruits allowed to mature on the trees do not keep well, and since the great demand for lemons is during the summer months, in order to insure a supply at the desired season the fruit is gathered when it has attained a standard size, though still in a partially developed state. It is kept in dark, cool rooms, where extremes of temperature and drafts can be prevented. When conditions are right, the immature fruit ripens slowly, loses moisture, and the rind becomes thin, tough, and pliable. Such fruits keep and ship well. When removed from the curing room, they are assorted, graded, wrapped in tissue paper, and packed in boxes like those used for oranges. The profit from lemon culture is large. Lemon growing in America has been extended so rapidly in recent years that the home crop is coming into keen competition with the Italian crop. California alone averages an annual crop of about 5000 carloads. The imports amount to about 150,000,000 pounds annually, the value in 1914 being \$5,981,563. Most of the imports are from Italy. See Plate of CITRUS FRUITS.

LEMON, MARK (1809-70). An English journalist, author, one of the founders, and an editor of *Punch*. He was born in London, Nov. 30, 1809. His only schooling was at Cheam in Surrey. When hardly more than a boy, he began writing tales and verse to the magazines. In 1835 the first of his many popular farces was performed at the Strand Theatre. In the course of his long career he was connected with *Household Words*, *Once a Week*, the *Illustrated London News*, and the *London Journal*. He wrote fairy tales, Christmas stories, and longer novels, as *Faulkner Lyle* (1866) and *Leyton Hall* (1867). He was also a successful lecturer and amateur actor. In conjunction with Henry Mayhew (q.v.) he founded *Punch*, the first number of which appeared July 17, 1841. From 1843 till his death he was sole manager. He gathered about him the best humorists of his time, among whom were Douglas Jerrold and Thackeray. Under his management *Punch* became an organ of immense social influence. He died at Crawley in Sussex, May 23, 1870. His well-known *Jest Book* was reprinted for the "Golden Treasury Series" (1892). Consult Hatton, *With a Show in the North: Reminiscences of Lemon* (London, 1871).

LEMON GRASS (so called from the lemon-like fragrance), *Andropogon nardus* and *Andropogon schænanthus*. Beautiful perennial grasses, 3 or 4 feet high, with panicles mostly leaning to one side, and spikelets in pairs, or, if terminal, in threes. They are natives of India, Arabia, etc., and are extremely abundant in many places. Lemon grass is too coarse to be relished by cattle except when young and is therefore often burned down. Europeans in India make an agreeable stomachic and tonic tea of the fresh leaves. By distillation a yellow essential oil, with a strong lemon-like smell, is obtained (lemon-grass oil), which is employed externally as a stimulant in rheumatic affections. It is used in perfumery and is often called oil of verbenia by perfumers. Lemon grass has been introduced into the West Indies, Australia, etc. See ANDROPOGON.

LEMON JUICE. A somewhat turbid sour liquid, obtained from lemons by expression and straining. Its acidity is due to the presence of citric acid, over 5 per cent in the form of free acid and citrates, mainly potassium. Other

acids, malic and phosphoric, occur in small proportion. It also contains some sugar, gum, and inorganic salts. Its physiological action is due to the presence of the alkaline citrates which enter the blood and are oxidized to water, carbon dioxide, and carbonates. Lemon and lime juice have long been used in the treatment of scurvy.

A most attractive cooling drink under the name of lemonade or lemon squash is made from the fresh juice, properly diluted with iced water and sweetened with sugar. See CITRIC ACID.

LEMONNIER, le-mō'nyā', (ANTOINE LOUIS) CAMILLE (1835-1913). A Belgian novelist, born at Ixelles, near Brussels. His earlier writing was in the field of art criticism, e.g., *Les salons de Bruxelles* (1863-66), *Salon de Paris* (1870), and *Les peintres de la vie* (1888). *La Belgique* (1887) received a prize from the Belgian government. His other works are novels, mostly of the Realistic school—*Contes flamands et wallons* (1873); *Un coin de village* (1879), *Les charniers* (1881), based on the battle of Sedan; *Happé-Char* (1886), much the same story as Zola's *Germinal*; and the serial *L'Enfant du crapaud*, the publication of which in *Le Gil Blas* (1889) was stopped and its author fined 1000 francs for immorality. His stories for children include *Bébés et joujoux* (1880), *La comédie des jouets*, and *Les histoires de huit bêtes et une poupée* (1888). Among his later writings are: *Au cœur frais de la forêt* (1900), a novel which has none of the brutality of his earlier work and is marked by unusual descriptive power, *Le sang et les roses* (1900); *Le vent dans le moulin* (1902); *Le petit homme de Dieu* (1903); *Comme va le ruisseau* (1903); *Le droit au bonheur* (1904).

LEMONNIER, PIERRE CHARLES (1715-99). A French astronomer. He was elected a member of the Académie des Sciences in 1736 and in the following year was associated with Maupertuis and Clairaut, at Torneå, in measuring a degree of the meridian in Lapland, within the polar circle. In 1739 he was elected honorary member of the Royal Society of London and for 12 years was its senior member. In 1741 he published *Histoire céleste*. In 1746 and 1748 he made some successful telescopic observations in relation to the planets Jupiter and Saturn and an eclipse of the sun. He held the chair of physics in the Collège de France for many years. In 1746 he published *Institutions astronomiques*, an elementary work. In 1748 he went to England and thence to Scotland to observe the solar eclipse. In 1771 he published *Nautical Astronomy* and various treatises on navigation, magnetism, and the variations of the compass, etc.

LEMON OIL. A volatile oil expressed from lemon peel (sp. gr. 0.857-0.862) and consisting chiefly of the hydrocarbon limonene (about 90 per cent) ($C_{10}H_{16}$) and the aldehyde citral ($C_{10}H_{16}O$), 4-5 per cent. The balance (5 per cent) consists of various aldehydes, terpenes, and esters. Oil of lemon is a fragrant yellow liquid, freely soluble in 95 per cent alcohol and very slightly in water. The oil comes chiefly from the island of Sicily, but is produced in smaller quantities in Spain, Portugal, California, and Australia. Two processes of extraction are used in Sicily—one by hand (sponge methods) and the other by a crude machine press. The hand process is as follows: culls or small inferior fruit are cut in halves and the pulp removed with a spoon. The rinds after soaking

in water are pressed over a shallow earthen bowl, partly filled with water and provided with a rounded wooden crosspiece with notches fitting the greatest diameter of the bowl. The peel is placed in a cup-shaped sponge and pressed against the wooden rest by hand assisted with a short stick, the oil flowing out into the bowl. When sufficient oil collects, it is blown from the bowl into another container. A skilled workman will produce from two to three pounds of oil per diem. Machine-pressed oil, obtained by a very simple hand press, is darker in color than the hand-pressed oil, and is used to tone up the color of pale oil.

Lemon oil is used in the preparation of lemon extract, a flavoring material largely used by confectioners and bakers. The genuine extract contains five parts of oil dissolved in 95 parts of strong alcohol. Terpeneless extract, consisting of citral mainly, is made by treating lemon peel or oil with weak alcohol, whereby the limonene is left insoluble. Such extracts should contain 0.2 per cent of citral. Genuine lemon extract clouds on addition of water, while the manipulated variety remains clear.

LEMONS, SALT OF. A name commonly but improperly applied to acid potassium oxalate.

LE MOUSTIER (lě mō'styä'). **MAN**. See MAN, SCIENCE OF, *Ancient Types*

LEMOVICES, lēm'ō-vi'sēz. See LIMOGES (end); LIMOUSIN.

LE MOYNE, le mwän, ANTOINE, SIEUR DE CHATEAUGUAY (1683-1747). A Canadian officer, and the youngest of the sons of Charles Le Moyne, Sieur de Longueuil. He became an officer in the French army and in 1704 led a party of settlers to the Colony of Louisiana, which had been founded by his brother, Iberville (q.v.). During the next two years he served under his brother against the English and with such distinction that in 1717 he was given command of the French troops in Louisiana. He served against the Spaniards in the Florida campaign of 1719. From 1720 to 1726 he was stationed at Mobile, then recalled to France and sent as Governor to Martinique and later to Cayenne. He was made Governor of Cape Breton in 1745, a year famous in the annals of that station on account of the capture of the fortress of Louisbourg (q.v.) by the New England forces under William Pepperell.

LE MOYNE, CHARLES, SIEUR DE LONGUEUIL (1626-83). A Canadian explorer. He was born in Normandy and when 15 years of age emigrated to Canada, where he and his family of 11 children took part in the early settlement of the country. He distinguished himself in the Indian wars, where he passed through many thrilling adventures and for his services was ennobled by Louis XIV, becoming Seigneur de Longueuil in 1668 and later receiving the additional title of Châteauguay. He was for many years Captain of Montreal. He died at Villemarie, Canada.

LE MOYNE, CHARLES, first BARON DE LONGUEUIL (1656-1729). A Canadian soldier; son of Charles Le Moyne, Sieur de Longueuil, and brother of several other famous soldiers and explorers. He served in the French army in Flanders, but, becoming interested in colonization, returned to Canada in 1683 and devoted himself to developing the resources of that country. He took a prominent part in the defense of Quebec against the English in 1690, was Governor of Montreal in 1700, and fought against Walker's expedition of 1711, in which year he

was appointed commandant general of Canada. In 1726 he obtained from the hostile Iroquois a concession to rebuild the important fort at Niagara, commanding the lower lakes, and was engaged in this work at the time of his death.

LE MOYNE, JACQUES, SIEUR DE SAINTE HELENE (1659-90). A Canadian army officer and the second son of the elder Charles Le Moyne, Sieur de Longueuil. He distinguished himself in an expedition against the English posts on Hudson Bay (1686), on which occasion three forts, a war vessel, and the Governor-General were captured. He also was prominent in the massacre at Schenectady in 1690 and was mortally wounded the same year at Quebec in defending that city against the attack of the English under Admiral Phipps.

LEMOYNE, JEAN BAPTISTE (1704-78). A French sculptor. He was born in Paris and studied under his father (Jean Louis Lemoine) and Robert Le Lorrain. He won the first prize for sculpture in 1725, was appointed a member of the Academy in 1738, professor in 1744, and director in 1768. Lemoine inherited the traditions of Coyzevox (q.v.) and was in his own day much criticized and applauded. His most important works—such as the colossal statues of Louis XV, a monument to the same Prince erected at Rennes, and the tomb of Cardinal Fleury—have been destroyed. His surviving works, among which are the fountain of Neptune at Versailles and the "Baptism of Christ" in the church of St. Roche, Paris, are mannered in style and lacking dignity and force; but his interesting portrait busts in terra cotta and marble, especially those of women, are lifelike, picturesque, and admirably characterized. They include such celebrated contemporaries as Fontanelle (Versailles), Voltaire, La Tour, Crébillon (Dijon Museum), Madame de Pompadour, Mademoiselle Clairon, and Mademoiselle Dangeville (the two last in the Théâtre Français). He also modeled a charming and graceful statue of Madame de Pompadour as "Flora Bathing." Lemoine was known as a successful and kindly teacher.

LE MOYNE, JEAN BAPTISTE, SIEUR DE BIENVILLE (1680-1768). A son of Charles Le Moyne, Sieur de Longueuil, and celebrated as one of the colonizers of Louisiana. See BIENVILLE.

LE MOYNE, JOSEPH, SIEUR DE SÉRIGNY (1668-1734). A Canadian officer and explorer, sixth son of Charles Le Moyne, Sieur de Longueuil. He served against the English in the Hudson Bay country in the early part of his career, but the French possessions to the south were the scene of his most noted exploits. He went with his brother Iberville (q.v.) to Louisiana and made a study of the Gulf coast. For gallant action against the Spaniards at Pensacola and at Mobile, he was in 1723 promoted to be rear admiral and Governor of Rochefort in France, where he passed the remainder of his life.

LE MOYNE, PAUL, SIEUR DE MARICOURT (1663-1704). A Canadian soldier and explorer, fourth son of Charles Le Moyne, Sieur de Longueuil. He became an officer in the French army in Canada and took a prominent part in colonial affairs, his success being largely due to his ability to deal with the Indians. He saw active service against the English in the Hudson Bay expedition of 1686 with his brother Iberville (q.v.) and in the attack on Quebec in 1690. In 1701 he negotiated a peace with the

Iroquois at the close of Frontenac's expedition against them. He was killed in an Iroquois raid upon the stockade fort where he was stationed.

LE MOYNE, PIERRE, SIEUR D'IBERVILLE (1661-1706). A son of Charles Le Moyne, Sieur de Longueuil, and one of the colonizers of Louisiana. See IBERVILLE.

LEM'PA. The principal river of Salvador, Central America. It rises in Lake Guija on the boundary of Guatemala and flows east and south through a fertile and well-populated region, emptying into the Pacific Ocean (Map: Central America, C 4). It is the largest river on the Pacific coast of Central America. Its length is 200 miles; it is navigable for 100 miles for small steamers.

LEMPRIÈRE, lém-prér', JOHN (c.1765-1824). An English classical scholar. He was born in the island of Jersey and studied at Westminster School and at Pembroke College, Oxford, receiving the degree of B.A. in 1790. After taking orders he became head master of schools in Abingdon and Exeter, and later rector of Meeth (1811) and of Newton-Petrock, Devonshire (1823). He is best known as the author of a classical dictionary, the *Bibliotheca Classica* (Reading, 1788; last ed., 1888), which was afterward frequently reprinted in England and in this country. It was founded upon Sabatier's great *Dictionnaire des auteurs classiques* (1766-90) and was itself used by Anthon (q.v.) as the basis of his classical dictionary. Other published works of Lemprière are *Sermons* (1791), a translation of *Herodotus*, first volume only (1792); and a *Dictionary of Universal Biography of Eminent Persons in all Ages and Countries* (London, 1808), enlarged and reprinted by Lord (New York, 1825).

LEMUR (Lat. *lemur*, ghost). Of the many curious animals characteristic of Madagascar, lemurs are perhaps the most interesting. The name was originally bestowed by Linnaeus on account of the nocturnal habits and peculiar ghostlike appearance of the species known to him, and it is still used as the name of the typical genus of the group. But at the present time it is not easy to determine whether all the animals of the suborder Lemuroidea are to be called lemurs or not. The lemuroids (suborder Lemuroidea) differ from all the other primates in certain peculiarities of the skull, hands, and feet, and in the simple structure of the brain, in which the cerebral hemispheres are little convoluted and do not conceal the cerebellum. Yet there is a rudimentary simian fissure. They stand at a lower level than other primates. The head lacks the human expression of the anthropoid apes or even of many monkeys—is more foxlike. The long tail in such as have it is never prehensile, nor is there ever any trace of cheek pouches or of integumental callosities. A curious contrast exists between the monkeys and the lemurs, as Beddard points out, in respect to the digits of the hands and feet. In the former it is the hallux or pollex which is subject to great variation, but in the lemurs the thumb and great toe are always well developed, although the second or the third digit constantly shows some abnormality, such as the remarkable elongation of the third digit in the aye-aye (q.v. for illustration) and in the absence of the index in the potto. In all lemurs, moreover, a sharp claw is borne upon the second toe, unlike the other flat nails. The dentition is peculiar in the way the incisors (four in each

LEMURS

1. MOUSE LEMUR (*Cheirogaleus murinus*).
2. SLENDER LORIS (*Loris gracilis*).
3. TARSIER (*Tarsius spectrum*).

5. RING-TAILED LEMUR (*Lemur catta*).
6. RUFFLED LEMUR (*Lemur varius*).
7. SLOW LEMUR or COMMON LORIS (*Nycticebus tardigradus*).

jaw) are enlarged and project forward, and in the incisor form of the lower canines. There are also important peculiarities in the visceral anatomy. The stomach is simple; the cæcum is always present and of variable lengths, but never has a vermiform appendix. Some of the arteries break up into retia mirabilia, not known elsewhere among primates, but a characteristic of edentates; and a still more remarkable contrast with other primates is the fact that among lemurs the placenta is nondeciduate.

The geographical distribution of the lemurs is extraordinary and has given rise to much speculation. (See LEMURIA.) Two-thirds of the group are confined to Madagascar and near-by islands, where their perpetuation as a race may be due to the scarcity of carnivores; the remainder belong to Ethiopia and the Oriental region, but in past ages they were widespread in Europe, Asia, and North America. The Lemuroidea fall very naturally into three families, Lemuridæ or Nycticibidæ, Tarsidæ, and Chiromyidæ, or Daubentonidæ. The last two, however, are very small groups, the first containing seven species, known as tarsiers (q.v.), and the latter a single species, the aye-aye (q.v.), and these are such curious animals that it is more natural not to call them lemurs. The family Lemuridæ or Nycticibidæ includes some 80 or 85 species, which are quite generally grouped in four subfamilies, of which the first includes the indris and avahis of Madagascar, the second, the true lemurs, the third, the chirogales of Madagascar and the galagos of Africa, and the fourth, the loris of Ceylon, India, and southeastern Asia, and the angwantibo (or awantibo) and potto of West Africa. The indris is one of the largest species, but the avahi or woolly lemur (*Avahi*, or *Luchanotus laniger*) is a small, solitary, and nocturnal species, slow in its movements and rarely descending to the ground. The mouse lemurs or chirogales (genus *Cheirogalcus*) are remarkable little creatures, long-tailed and nocturnal, some of the species build nests like those of birds, while others are notable for spending the dry season in a state of torpidity, in a hollow in a tree, great quantities of accumulated fat providing the necessary nourishment. The galagos (genus *Galago*) have large, round, naked ears, which the animal can fold at will; they are small, beautiful, active nocturnal animals, with large eyes, long tails, and soft woolly fur. The loris and pottos are remarkable for the slowness of their movements and the small or rudimentary index finger.

The true lemurs are characterized by having 36 teeth, long tails, moderately elongated tarsus, and short cæcum. They are confined to Madagascar and the adjacent Comoro Islands. They vary in size from that of a cat to that of a small squirrel, with foxlike faces and soft, thick fur. They walk on the ground or run about on the limbs of trees on all fours, but they are capable of very agile jumping. They are diurnal, but most active towards evening, and are very noisy, as they go about in small troops; only two or three species are nocturnal or solitary. They are omnivorous and eat insects and birds' eggs as well as buds and fruit. At rest, the tail is usually coiled around the body for warmth. Only one or two young are born at a time, and they are carried about by the mother, at first on her front (the mammae are pectoral), but later on her back. Lemurs are easily kept

and often breed in captivity, and are common in menageries. They are very variable in color, and for that reason the validity of many species is open to question. The most beautiful is the ring-tailed lemur (*Lemur catta*), or Madagascar cat, which is gray, with the long tail marked with alternate black and white rings. Like the others it is locally distributed—not scattered generally all over the island, but only where the environment is suitable. This species lives only on slippery seaside cliffs, where it scrambles about rocks where not even barefooted men can walk, its long, smooth, leather-like palms enabling it to go safely. It feeds almost wholly on the fruit of the prickly pear in winter, stripping off the spinous skin by means of the long canine teeth. In summer it eats wild figs and bananas mainly. It may be easily tamed and taught to live upon cooked rice and the like, but will take no meat. These lemurs use their teeth as weapons, but also strike with their hands, and will put to flight dogs larger than themselves.

The broad-nosed lemur (*Hapalemur myoxicebus griseus*) lives only among bamboos, whose young shoots form its principal fare; it also eats grass and sugar cane. This genus is remarkable for a spine-bearing gland on the forearm. Many lemurs have strange processes upon the skin, the purpose of which is not clearly understood. The color of some species varies with sex, as *Lemur macaco*, the male of which is black and the female red. The ruffed lemur (*Lemur varius variegatus*) is the largest of the race. It inhabits northeastern Madagascar and, as its name implies, is remarkable for its variation in color, some being black and white in patches variously disposed, others reddish brown or red and black. The hair on the neck forms a high ruff.

Lemurs are all perfectly harmless, but their big eyes, weird actions (in some cases), and often loud and strange nocturnal cries have led to their being regarded with superstition by the ignorant, especially in the Oriental countries. Much folklore and superstition have therefore gathered about many species. Consult, on this point, Flower, *Proceedings of the Zoological Society of London* for 1900, p. 231.

See PRIMATES; AYE-AYE; GALAGO; MOUSE LEMUR, POTTO; and other names of particular species. See Plate of LEMURS.

Bibliography. Grandidier and Milne-Edwards, "Mammals," in *Histoire naturelle de Madagascar* (Paris, 1875); also articles in the *Proceedings of the Zoological Society of London* for 1864, 1865, 1867, 1873, 1879, and 1895; and the *Transactions of the same society* for 1863, 1869, and 1872. An excellent account is by Richard Lydekker, *Royal Natural History*, vol. i (London, 1894); and the most recent summary of the group is to be found in D. G. Elliot, *Review of the Primates* (New York, 1913).

LEMURES, lêm'û-rêz (Lat. nom. pl., ghosts). Among the Romans of historic times, the same as *Larvæ* (q.v.), i.e., the souls of the departed, especially of ancestors who hovered about during the night with hostile spirit and so required propitiation by surviving descendants. The festival called Lemuria was held on May 9, 11, and 13. At midnight of each day the father of the family, with bare feet and well-washed hands, using special ceremonies, nine times spat black beans out of his mouth as he walked through the house, looking the while the other

way. Thus, as was supposed, he banished the ghosts from the house for another year. Ovid describes Lemuria in *Fasti* v, 419 ff. Consult W. W. Fowler, *Roman Festivals* (London, 1899), and Georg Wissowa, *Religion und Kultus der Römer* (2d ed., Munich, 1912).

LEMURIA (Neo-Lat., from Lat. *lemur*, ghost). In zoölogy, a hypothetical continent, now largely covered by the Indian Ocean, which was proposed by Haeckel as an area of ancient land characterized by being inhabited by lemuroid animals. The object of the hypothesis was to account for the fact that now lemurs inhabit the widely separated regions of Madagascar and the Malayan islands. The recent evidence that the earliest lemurs inhabited America destroys both the basis of, and the need for, this hypothesis. Consult: A. R. Wallace, *Geographical Distribution of Animals* (New York, 1876); Scott, *The Lost Lemuria* (ib., 1904); R. Steiner, *Submerged Continents of Atlantis and Lemuria: Their History and Civilization* (Chicago, 1911). See LEMUR.

LENA, læ'ná. The easternmost of the three great rivers of Siberia and the chief waterway of east Siberia (Map: Asia, O 2). It rises on the slopes of the Baikal Mountains, about 30 miles west of Lake Baikal and 186 miles northeast of Irkutsk. It flows first in a general northeasterly direction to the town of Yakutsk, after which it flows northwest and then northward. It falls into the Arctic Ocean about long. 127° E., forming a vast delta consisting of seven principal and numerous secondary arms. Its total length is estimated at 2850 miles. The upper course of the river, from its rise to its junction with the Kuta (about 430 miles), at which point it becomes navigable for steamers, is through a mountainous region where the scenery is very picturesque. Its banks are partly rocky and barren and partly covered with thick forests; its course is swift. There is very little agricultural land along the upper course, and the chief occupations of the adjacent settlements are fishing and hunting. The middle stream, from the mouth of the Kuta to its junction with its chief tributary, the Aldan (over 1400 miles), below Yakutsk, is much wider and has on the whole the appearance of a navigable river. The banks are partly lined with mountain masses of red sandstone, and numerous reefs and islets render navigation hazardous. The country along the middle course of the Lena is very sparsely inhabited by Yakuts. From the confluence of the Aldan (double the volume of the upper Lena) the stream has a width of from 4 to 5 miles. In the lower middle course of the river the banks are precipitous and thickly wooded, while towards the delta they become barren and covered with masses of rocks, among which snow remains even during the summer, and here there are practically no permanent settlements. The inclosed islets of the delta are flat and covered only with hardy grasses and moss. On a rocky promontory of one of the inclosed islands, known as Monument Cape, stands a wooden cross commemorating the victims of the *Jeannette* expedition buried there. The Lena is frozen at Kirensk (at the beginning of its middle course) from the end of October to the end of April; at Yakutsk from the middle of October to the end of May; and at the delta from the middle of September to the middle of June, and some of the deltaic channels are sometimes blocked with ice through the year. The

opening of the river is accompanied by disastrous floods because of the melting of the snow in the upper reaches while the mouth is still locked in ice. Steam navigation was first introduced on the Lena in 1822, and is confined chiefly to the upper part of the river and its tributaries, freight (chiefly minerals, fish, and grain) being carried principally in barges and wooden vessels built in the shipyards on the upper course, where shipbuilding is the chief industry. The principal ports on the Lena are Verkholensk, Vitimsk, Olekminsk, Yakutsk, and Bulun. The Lena has numerous tributaries, of which the most noteworthy are the Kirenga, the Vitim, the Olekma, and the Aldan from the right and the Viluy from the left. The river is rich in fish, but its fishery industries are still undeveloped and are mostly in the hands of the Yakuts. Some of the tributaries of the river abound in gold, and the region along the river is highly mineralized in some parts. The Lena was discovered by the Russians in 1628.

LENAPE. A tribe of Indians. See DELAWARE.

LENAPE (lén'a-pē) **STONE**. A slate tablet found in Bucks Co., Pa., in 1872, bearing, among other things, the outline of an elephant or mammoth. It is of doubtful authenticity. Consult H. C. Mercer, *The Lenape Stone* (Philadelphia, 1885).

LENARD, le-närt', PHILIPP (1862-). A Hungarian physicist, born at Pressburg, Hungary. He was educated at the universities of Budapest, Vienna, Berlin, and Heidelberg. In 1896 he was professor at Heidelberg and in 1898 became professor and director of physical sciences at Kiel. In 1907 he returned to Heidelberg and in 1909 became head of the newly established radiological institute there. He first observed the peculiar properties of cathode rays penetrating into the outside air from the Crookes tube, which rays now bear his name. In 1905 he was awarded the Nobel prize for physics. He wrote *Ueber Kathodenstrahlen* (1906) and *Ueber Aether und Materie* (1910).

LENARTOWICZ, lén'ar-tó'vich, TEOFIL (1822-93). A Polish poet, born at Warsaw and educated there. He lectured on Polish literature at Bologna for a time, then went to Rome, and afterward lived in Florence. His best-known poems are *Szopka* (1849), *Lurenka* (1851), *Nowa Lurenka* (1857), *Poezje* (1861), and the idyl *Jagoda z mazowieckich lasów* (A Berry from the Masovian Forest, 1880). They are passionately patriotic, religious, and descriptive of quiet rural life. He translated Dante's *Divina Commedia* into Polish. Lenartowicz was also a gifted sculptor.

LENAU, læ'nou, NIKOLAUS (1802-50). A name assumed by Nikolaus Niernbsch von Strehlenau, an Austrian lyric and elegiac poet. He was born at Csátfád, Hungary, studied philosophy, law, and then medicine at Pressburg and Vienna, but he early turned to the profession of letters. His genius first found expression in *Gedichte* (1832), full of sadness and exquisitely melodious. He then went to Stuttgart and associated with poets of the Swabian school, especially Kerner, Schwab, and Karl Mayer. Growing restless there, he went to America in 1832 and traveled on horseback as far as Ohio, in what was then the West. He returned in 1833, disillusioned by experience, to find himself already poetically famous as the lyric representative of what was an emotional period of politi-

ical transition. The next ten years were passed at Vienna and in Swabia. *Faust* (written 1833-34; published 1836; 2d ed., 1840) showed even more than the poems of 1832 a nature at rest neither with itself, with the world, nor with God. It wavers between the epic and the dramatic, but abounds in brilliant scenes. In the same year he published *Neuere Gedichte* (2d enlarged ed., 1840). *Savonarola* (1838, 5th ed., 1866) is perhaps the highest point he ever reached in his art, while *Die Albigenser* (1842; 4th ed., 1873) is to be regarded rather as a fragment. *Don Juan* (1851), a sort of drama, was left unfinished at his death. Lenau's finest poems are descriptive of Hungarian life and scenery. He was involved in two or three sad love affairs. Soon after 1844 he became insane. The rest of his life was passed in the asylum at Oberdöbling, near Vienna. He died Aug. 22, 1850. His *Sammliche Werke* were edited by Anastasius Grün (in 4 vols., Stuttgart, 1855; 2 vols., 1881). There is a later edition with life and notes (Leipzig, 2 vols., 1882), another (2 vols., Berlin, 1883), and a critical edition by Schaeffer in two volumes (Leipzig, 1905).

Bibliography. A. X. Schurz, *Lenaus Leben* (2 vols., Stuttgart, 1855); L. A. Frankl, *Zu Lenau Biographie* (2d ed., Vienna, 1885), and his edition of *Lenau und Sophie Louenthal, Tagebuch und Briefe des Dichters* (Stuttgart, 1892); T. S. Baker, *Lenau and Young Germany in America* (Philadelphia, 1897); L. Raustan, *Lenau et son temps* (Paris, 1898); A. W. Ernst, *Lenaus Frauen gestalten* (Stuttgart, 1902); Camillo von Klenze, *The Treatment of Nature in the Works of Lenau* (Chicago, 1902); Isidor Sadger, *Aus den Liebesleben Lenaus* (Vienna, 1909).

LENBACH, Iān'hāg, FRANZ VON (1836-1904). A German portrait painter, the greatest of the nineteenth century. He was born at Schrobenuhausen in Upper Bavaria, Dec. 13, 1836. When a boy he worked as an apprentice to his father, a master mason. His first artistic studies were all made directly from nature, and a brief period of study at the Polytechnic School of Augsburg only served to instill in him a lifelong hatred for art academies. Two years' work under Gräffe at Munich increased this dislike. He worked for himself in his native village until in 1857 he became a pupil of Piloty at Munich. His first work to attract attention was "Peasants Taking Refuge from a Storm in a Chapel" (1857), now in the Magdeburg Museum. It reveals the influence of Piloty, but contains a powerful naturalism unknown to that master. During the same year he accompanied Piloty to Italy, where he had occasion to study more thoroughly the old masters, whom he already revered. One of the results of this journey was his "Arch of Titus," in 1858, now in the Museum of Pressburg, the vivid realism of which caused much commotion. Equally powerful is his "Shepherd Boy" (1860), in the Schack collection, Munich. In 1860 he was called, together with Böcklin and Reinhold Begas, to teach in the new art school at Weimar, but remained only a year and a half.

The most important influence in the formation of his style was his commission from Baron Schack to copy works of Titian, Rubens, Velazquez, and other masters for his gallery at Munich. In 1863 he was sent to Italy, and in 1867 to Spain. By the study of these masters he acquired a mastery of color, in which he had

hitherto been deficient. After his return to Munich in 1868 he devoted himself entirely to portraiture, which he had long recognized as his chief strength and soon became the most famous portraitist of Germany. From 1872 to 1874 he resided in Vienna, where he was held in highest esteem, and painted the Emperor and other Austrian notables. In 1875-76 he visited Egypt, and after that time resided at Munich. Many of his winters, after 1882, were passed at Rome, where he was the centre of a brilliant artistic circle, and portrayed the Pope, Queen Margherita, and Minister Minghetti (1885, Dresden). He received gold medals at Paris (1875), Munich (1869, 1879), and Vienna (1882), and many orders and honors, and an honorary doctorate was conferred on him by the University of Halle.

Lenbach's work in the beginning was as frankly realistic as that of Courbet, but his realism was softened and idealized by study of the old masters. His first portraits resemble Rembrandt's in the treatment of life and in characterization. He was a great admirer of Rubens, but neither Rubens nor Velazquez seems to have influenced him as much as Titian. The old masters, however, never affected the individuality of his work. He excelled especially in characterization. Knowing his sitters, he portrayed them in the fullest extent the painter's conception of his character. His conception, though a high one, was always true. His color was harmonious and pleasing, he was a fine brushman, and knew just what to emphasize. Only the head and eyes were finished; the hands and dress much less so, and there were no accessories. At first famous for male portraits, in later life he succeeded also with women. Children he painted only after the birth of his own little girl, whom he portrayed many times and with great charm. Lenbach's portraits are a pictorial epic of his age and country. He has immortalized the great and celebrated Germans of a whole century.

To his art is due the popular aspect of the great men who created the modern German empire, whom he portrayed over and over again—the strong and rugged Bismarck, of which good examples are in the collection of Baron (National Gallery), Munich; and Prince Bismarck (Hamburg, Leipzig, Frankfurt, Königsberg, Cologne, Leipzig); the thoughtful and scholarly Moltke, the kindly old Emperor William I (Leipzig, Frankfurt, Crefeld); the chivalric Crown Prince, afterward Frederick III. Among other celebrated sitters were Emperor William II, King Albert of Saxony (Dresden), Pope Leo XIII (1885, New Pinakothek, Munich), Count Schack, Paul Heyse, his wife, Gladstone, Döllinger (Munich), Bishop Strossmayer, Delbrück, Richard Wagner, Franz Liszt, Helmholtz, Johann Strauss, Hans von Bülow, and Hermann Levi. His latest works include portraits of Prince Regent Leopold of Bavaria, the Imperial Chancellor Hohenlohe-Schillingsfürst (Berlin), the historian Mommsen, and the architect Gabriel Seidl. The best known of his portraits of himself are those of 1865, in the Schack Gallery at Munich, in the manner of Rembrandt, and that of 1895, in which the artist is said to rival Titian. The very essence of his art is shown in his chalk drawings, in the mastery of which he may even be compared with Holbein. His portraits were produced in heliogravure under the title *Franz*

von Lenbachs zeitgenössische Bildnisse (Munich, 1891-96). Consult: Rosenberg, "Lenbach," in *Künstler Monographien* (Bielefeld, 1898); W. Wyl, *Franz von Lenbach, Gespräche und Erinnerungen* (Stuttgart, 1904); Christian Brinton, *Modern Artists* (New York, 1908).

LEN'CAN. An interesting tribe or confederacy, with several subtribes, constituting a distinct linguistic stock, occupying the mountain regions of Honduras, westward from Comayagua and perhaps extending over the Salvador border. They are fairly civilized, industrious and peaceable, although brave fighters with a strong feeling of native patriotism.

L'ENCLOS, län'kló', NINON DE. See NINON DE LENCLOS.

LEND A HAND CLUBS. Societies of a religious, philanthropical, and social character formed among young people. The name is from a story by the Rev. Edward Everett Hale, *Ten Times One Is Ten* (Boston, 1870), relating how 10 persons banded themselves together to live the mottoes, "Look up and not down; look forward and not backward; look out and not in; lend a hand." Each of the original 10 persuaded 10 others to devote themselves to the same service, and thus, according to the story, in 27 years the entire world was won. The first Lend a Hand Club was formed in 1870, and without any concerted effort similar bands sprang up in many places. In 1874 a common bond was thought desirable, and at Chautauqua, N. Y., the Look Up Legion was formed, a little later its organ, *Lend a Hand*—a monthly, edited by Dr. Hale—was established. In 1891 the Ten Times One Corporation was brought into being. In 1900 there existed these affiliated societies: the Look Up Legion, the Commercial Temperance Union; the Order of Send Me, the Lend a Hand clubs; the I. H. N. [In His Name—the title of Mr. Hale's touching Waldensian story] clubs. A badge, the Maltese cross, and a motto, "In His Name," have been adopted in common, but their use is voluntary. Consult Bacon and Northrop, *Young People's Societies* (New York, 1900). See CHRISTIAN ENDEAVOR, YOUNG PEOPLE'S SOCIETY OF; KING'S DAUGHTERS AND SONS; BROTHERHOOD OF SAINT ANDREW; EPWORTH LEAGUE.

LENDIT, FAIR OF. See LANDIT.

LENEPVEU, lén'e-vē', JULES EUGÈNE (1819-98). A French genre and historical painter. He was born at Angers and was a pupil of Picot and at the Beaux-Arts, won the Prix de Rome in 1847 with his "Death of Vitellius," and in the same year exhibited a "Saint Saturnin" (Angers Museum). In 1855 he sent to the international exposition several canvases showing Italian influence: "The Martyrs in the Catacombs" (bought by the state), "Pius IX in the Sistine Chapel," and a "Festival at Venice." More original were "A Venetian Wedding" (1857), "The Virgin at Calvary" (Nantes Museum), and "Hylas" (1865). In the later period of his life he exhibited less at the Salon and was occupied chiefly with the decoration of public buildings. This work includes the frescoes of the theatre at Angers; those in the chapel of the hospice of St. Mary at Angers; decorations of many Paris churches, especially Ste. Clotilde, St. Louis en l'Île, and St. Sulpice; the ceiling of the Paris Opera House, executed in the manner of Tiepolo; and decorative paintings in the Panthéon. Lenepveu is a typical painter of the classical style.

LENFANT, lén'fän', JACQUES (1661-1728). A French Protestant theologian. He was born at Bazouche, and was educated at Saumur, at Geneva, and at Heidelberg, where he became minister of the French Protestants in 1684. In 1689 he became pastor of the French church at Berlin, and, except for visits to England and Holland in 1707 and to German cities, remained there until his death. His writings include: *Histoire de la papesse Jeanne* (1694); his chief work, *Histoire du concile de Constance* (1714); *Histoire de la guerre des Hussites et du concile de Bâle* (1731).

L'ENFANT, PIERRE CHARLES (1755-1825). A French officer who came to America with Lafayette in 1777 and joined the American army. He was promoted to a captaincy in the engineers in 1779, was severely wounded in the attack on Savannah in the same year; was taken prisoner at Charleston in May, 1780; was exchanged in the following November, and was commissioned brevet major, May 2, 1783. He designed the badge of the Order of the Cincinnati. In 1791 he planned the city of Washington, under the direction of George Washington, and with aid in the way of plans of foreign cities from Thomas Jefferson. More than a century later this service brought him into prominence in connection with the attention given to city planning (q.v.) in the United States since 1900. In 1911 a monument to L'Enfant, built with money appropriated by Congress, was dedicated in the National Cemetery at Arlington, Va. A copy of L'Enfant's plan of Washington is carved on the monument. He is also credited with the radial revenues which are a feature of the city of Buffalo. In 1812 he declined the professorship of engineering at West Point offered him by President Madison. He designed several public buildings in the larger cities of the East.

LENNER, lén'ér, VICTOR (1873-). An American chemist. He was born at Belmond, Iowa, and studied at Dickinson College (1889-90) and at the University of Pennsylvania (Ph.D., 1898); was an assistant in chemistry at the University of California (1893-96) and at Columbia (1898-1900), and at the University of Wisconsin served as assistant professor of general and theoretical chemistry (1900-04), associate professor of chemistry (1904-07), and thereafter as professor. He translated Moissan's *The Electric Furnace* (1904) and is author of *Laboratory Experiments* (1902; 4th ed., 1906).

LENNÉ, lén-ná', PETER JOSEPH (1789-1866). A noted German landscape gardener and architect, son of the famous naturalist best known by the Latinized name Linnæus. (See LINNÆUS.) After studying the sciences and architecture he went to Paris and Vienna to specialize in garden architecture and arrangement. At Vienna he remodeled the gardens of the court, and at Berlin he united beautifully the gardens and parks of Potsdam. He was the architect of the prison at Coblenz, the school of architecture and horticulture at Berlin, and the restorer of the residence of Sans-Souci. His fame was so well deserved that his torso was placed in the galleries of Sans-Souci.

LENNEP, lén'nép, JACOB VAN (1802-68). A Dutch dramatist and novelist, born in Amsterdam, son of the philologist David Jacob Lennep. Educated for the law, he soon acquired a large practice, writing at the same time poems (1826-27) and many patriotic novels and plays that won him the title of the Walter Scott of Hol-

land. Of these the first were versified *Legends of the Fatherland* (1828), followed by the comedies *The Frontier Village* (1830) and *The Village over the Frontier* (1830), and the novels (among many others) *Our Forefathers* (1838), *The Rose of Dekama* (1836), and *The Adopted Son*, the last two translated (1847). Lennep also made noteworthy translations into Dutch from Shakespeare, Byron, Southey, and Tennyson, and worked for some years on an uncompleted edition of the great Dutch poet Vondel, *De Werken van Vondel in verband gebracht met zijn leven* (1855-69). Lennep's *Dramatic Works* are collected in 3 volumes (1852-54), his poems in 13 volumes (1859-72), his novels in 23 (1855-72). His *De Voornaamste Geschiedenissen van Noord-Nederland*, corresponding to Scott's *Tales of a Grandfather*, are in 4 volumes (1845-49). Lennep was also a diligent contributor to periodicals. Consult his *Life* and a bibliography in Ten Brink, *Geschiedenis der Noord-Nederlandsche Letteren in de XIX eeuw*, vol. i (Rotterdam, 1904).

LENNGREN, lén'grän, ANNA MARIA (1755-1817). A Swedish poet, born probably at Upsala. Her father, Magnus Malmstedt, was a professor at the University of Upsala, and Anna was carefully educated. When she was 18, her first poem appeared and attracted much attention. Afterward she translated French and Latin plays, which were presented before the court. In 1780 she married Karl Peter Lenngren, one of the editors of the *Stockholmsposten*, and her poems were published anonymously in this journal for several years. When her identity was discovered, the Swedes hailed their new poet with enthusiasm. She is not profound or imaginative in an original way, but she is always graceful and natural, and her idyls and satires reflect the life she knew. Her collected poems (*Skaldeforsök*) were first published in 1819, in 1856 with a biography by Carlén, and again with a biography by Warburg and illustrations by Larsson (Stockholm, 14th ed., 1907).

LENNI LENAPE, lén' lén'a-pə. An Algonquin tribe. See DELAWARE.

LENNON, JOHN BROWN (1849-). An American union labor leader and public official. He was born in Lafayette Co., Wis., and was educated in the public schools. From 1886 to 1910 he was general secretary of the Journeyman Tailors' Union of America and also editor of *The Tailor*. In 1889 he became treasurer of the American Federation of Labor. He was appointed a member of the Commission on Industrial Relations by President Taft and was continued in that capacity by President Wilson. He became known as a lecturer on social problems and was chosen vice president of the Illinois Anti-Saloon League.

LENNOX, CHARLES. See RICHMOND, third DUKE OF.

LENNOX, CHARLOTTE RAMSAY (1720-1804). An Anglo-American poet, Shakespearean critic, and miscellaneous writer, born in New York. Her father was Lieutenant Governor Ramsay. She was sent to school in England at 15, married there, never returned to America, and at the age of 27 attracted attention by a volume of *Poems on Several Occasions* (1747). She was highly esteemed by the novelist Richardson and by Samuel Johnson, and on the death of her husband, Henry Lennox, supported herself by miscellaneous writing. Among her works were: *Memoirs of Harriet Stuart* (1751), *The*

Female Quixote (1752), and *Henrietta* (1758), popular novels; a translation of *Sully's Memoirs* (1761; reprinted, 1854-56); a novel, *Sophia*; two comedies, *The Sisters* (1769) and *Old City Manners* (1773); *Euphemia*, a novel (1790); and *Memoirs of Henry Lennox* (1804). Most noteworthy of her works is *Shakespeare Illustrated* (3 vols., 1753-54), a collection of the novelistic sources of Shakespeare, translated and annotated with the general aim of showing the inferiority of the dramas to their originals. Dr. Johnson was thought to have had a hand in this work, for which he wrote the dedication. For an amusing sketch of the work, consult T. R. Lounsbury, *Shakespeare as a Dramatist* (new ed., New York, 1908).

LENNOX, EARL OF. See STEWART, MATTHEW.

LENNOX, WILLIAM PITT, LORD (1799-1881). An English soldier and writer, fourth son of the fourth Duke of Richmond and godson of William Pitt. He was educated at Westminster and, having entered the army, served for several years on the staff of the Duke of Wellington. He was also a voluminous contributor to the *Sporting Review*, *Bentley's*, and other magazines and newspapers. Among his publications, which include works on history and fiction, are: *Compton Audley* (1841), *The Tuft-Hunter* (1843); *Percy Hamilton* (1852), *Philip Courtney* (1852), *Merré England* (1857), *Recreations of a Sportsman* (1862), *Life of the Fifth Duke of Richmond* (1862); *Adventures of a Man of Family* (1864), *Drafts on my Memory* (1865); *Fifty Years' Biographical Reminiscences* (1863); *My Recollections from 1806 to 1873* (1874); *Fashion Then and Now* (1878); *Plays, Players, and Playhouses* (1881).

LENNOXVILLE. A village in Sherbrooke Co., Quebec, Canada, at the junction of the Massawippi and St. Francis rivers and on the Grand Trunk and Canadian Pacific railways, 105 miles south-southwest of the city of Quebec (Map: Quebec, G 5). It is the seat of the University of Bishop's College and of Bishop's College School. Pop., 1901, 1120; 1911, 1211.

LENOIR, le-nôr'. A town and the county seat of Caldwell Co., N. C., 70 miles by rail northwest of Charlotte, on the Carolina and Northwestern Railroad (Map: North Carolina, A 2). It is the seat of the Davenport Female College and contains the Foot Hills Sanitarium, Pioneer Library, Blowing Rock (in the vicinity), at an elevation of 4500 feet, and High Briten Park. The town is an important furniture-manufacturing centre and has also cotton, yarn, veneer, and roller mills, machine shops, harness factory, lumber yards, etc. Lenoir is situated in a fertile agricultural and fruit-growing region, and there are some gold and mica mines near by. The water works and sewage system are owned by the municipality. Pop., 1900, 1296; 1910, 3364.

LENOIR, le-nwär', ALEXANDRE ALBERT (1801-91). A French architect, son of Alexandre Marie Lenoir, the painter and archaeologist. He studied at the Collège Bourbon and was a pupil of Debret in the Ecole des Beaux-Arts. He lived in Rome (1830-32) and in 1833 wrote *Projet d'un musée historique*, suggesting the union of the Palais des Thermes and the Hôtel de Cluny. He was appointed architect to carry out this plan, became a member of the committee on historic monuments in the Bureau of Education, secretary of the Ecole des Beaux-Arts for life (1862), and a member of the Academy of Fine

Arts (1869). He wrote the very valuable work, *Instruction sur l'architecture monastique* (1852-56); *Des monuments antérieurs à l'établissement du christianisme dans les Gaules* (1840); *Architecture militaire au moyen âge* and *Monuments religieux au moyen âge* (1847); *Le tombeau de Napoléon Ier aux Invalides* (1855); *Statistique monumentale de Paris* (1861-67). He was famous for his reproductions of mediæval buildings.

LENOIR CITY. A city in London Co., Tenn., 23 miles southwest of Knoxville, on the Southern Railway, situated at the junction of the Tennessee and Little Tennessee rivers (Map: Tennessee, F'3). There are extensive car works, cotton-yarn and hosiery mills, lumber yards, and a flour mill, for which ample water power is available. Lenoir City owns and operates its water-works system. Pop., 1910, 3392.

LENORE, Ger. pron. lâ-nô're. 1. A noted ballad by Bürger (1773) and the name of its heroine. The story rests on a variety of similar Slavic tales, which gave rise to the German tradition. Its basis is the popular belief that the tears of a maiden for a lost lover may bring him back from the grave in the form of a vampire. In all the tales of this class the lover fetches the maiden from her home and carries her with him on a demoniac ride to the churchyard, where she is either torn in pieces or rescued at the last moment by the crowing of the cock or by some providential intervention. 2. A poem by E. A. Poe, first published under the title *A Pæan* (1831). 3. The heroine of Poe's *Raven*.

LENORMAND, le-nôr'mân', MARIE ANNE ADELAÏDE (1772-1843). A French fortune teller, born at Alençon. After going to Paris (1790) she took up fortune telling as a profession. She soon attracted attention and opened a "cabinet of divining," where for many years she was consulted by persons of all ranks, even by the court of Napoleon. It is said that Josephine was greatly influenced by her. In 1809 she had to leave Paris and went to Brussels. She was repeatedly imprisoned. Among her publications are: *Prophétiques* (1815); *Souvenirs de la Belgique* (1822); *Memoirs of the Empress Josephine*, vol. i (1904).

LENORMANT, le-nôr'mân', CHARLES (1802-59). A French archaeologist, born in Paris. He originally studied law and prepared himself especially for the teaching of Roman law, but after visiting Italy devoted himself to archaeology. He was made inspector of fine arts in 1825 and in 1828 accompanied the younger Champollion to Egypt. Afterward he went to Greece as a member of the commission to explore the Morea. He was made curator of the library of the Arsenal in 1830, and in the Royal Library he became assistant curator of the cabinet of antiquities (1832), curator of printed books (1837), and director of the cabinet of medals (1841). Meanwhile he had lectured at the Sorbonne. He was elected to the Institute in 1839 and in 1848 was appointed to the chair of Egyptian archaeology in the Collège de France. He contributed numerous articles on art and archaeology, chiefly to the *Correspondant* (ed. by him, 1843-55), and to the *Annales de l'Institut Archéologique de Rome*, the *Revue de Numismatique*, and the *Recueil de l'Académie des Inscriptions*. Books written by him include: *Des artistes contemporains* (1833); *Introduction à l'histoire orientale* (1838); *Musée des antiquités égyptiennes* (1835-42); *Le trésor de numismatique et de*

glyptique (1834-50), with Paul Delaroché and Henriquel-Dupont, *Elite des monuments céramographiques* (4 vols., 1837-61), with De Witte; *Questions historiques* (1845).

LENORMANT, FRANÇOIS (1837-83). A French archaeologist, born in Paris. He was early trained by his father, the archaeologist Charles Lenormant, in the Greek literature and instructed as to the monuments; and when only fourteen years of age he published in the *Revue Archéologique* an article on some Greek tablets from Memphis. In 1857, for an essay entitled *Classification des monnaies des Lagides*, he was awarded the numismatic prize by the *Académie des Inscriptions*, and two years later went with his father to Greece and the East. In 1860, after the massacre of Christians by the Druses (q.v.), he went to Syria, and afterward published a *Histoire des massacres de Syrie en 1860* (1861). Returning to Greece, he conducted excavations at Eleusis and along the Sacred Way, of which the results were partially embodied in *La voie sacrée éleusienne* (1864), a work unfortunately never completed, and in articles in periodicals. In 1862 he was appointed sub-librarian of the French Institute, and in 1874 professor of archaeology at the Bibliothèque Nationale. During his last years he devoted part of his time to an exploration of the less-visited parts of southern Italy. Here he met with an accident and, after a long illness, died Dec. 9, 1883. Lenormant was a scholar of encyclopædic learning, wonderful diversity of interest, and great productivity. In Greek archaeology proper his contributions were largely in the form of articles in such journals as the *Revue Archéologique* and the *Gazette Archéologique*, of which he was founder in 1875 (with De Witte), editor, and chief contributor. He edited, with Robiou, *Chefs d'œuvre de l'art antique* (7 vols., 1867-68), and had begun to publish the results of his Italian travels in *La Grande-Grèce* (1880-84) and *A travers l'Apulie et la Lucanie* (1883). In the field of numismatics his great work was *La monnaie dans l'antiquité* (1878-79), of which only three volumes appeared, but he also published a popular work, *Monnaies et médailles* (1883), and numerous essays. Perhaps his most lasting work was done in the study of the ancient nations of the East, with especial reference to the origins and early forms of their civilization. His studies were summarized in the *Manuel de l'histoire ancienne de l'Orient* (1869; 9th ed., 1881-83) and *Les origines de l'histoire d'après la bible et les traditions des peuples orientaux* (1880-84). His discovery of the Accadian, a non-Semitic language, in the cuneiform texts, was announced and defended in a series of papers, and his investigation of the Chaldean religion led to the publication of *Les sciences occultes en Asie* (1874-75). Important at the time of its publication was the *Essai sur la propagation de l'alphabet phénicien dans l'ancien monde* (1872-75).

LE NÔTRE (LE NOSTRE), le nô'tr', ANDRÉ (1613-1700). A French landscape gardener, born in Paris. He was the son of the superintendent of the Tuileries gardens, studied painting under Simon Vouet, and later took up architecture. But Le Nôtre preferred the occupation of his father, and by first applying his principles to the Tuileries gardens soon gained such a reputation that Fouquet gave him charge of laying out the grounds of the Château de Vaux. This

was the first example of the formal French garden, stiffly designed on geometrical lines, with artificial lakes and grottoes, and ornamented with statues and clipped trees, kept at some distance from the mansion so as not to interfere with the view. But, despite its severity, the design had a certain grandeur, and it suited the architecture of the day. When Louis XIV saw these gardens en fête, he made Le Nôtre director of the royal grounds (1657) and gave him charge of the new park of Versailles, which shows, more than any other of his works, his wonderful knowledge of perspective. Other French gardens that he laid out, entirely or partially, are those of Chantilly, Meudon, Saint-Cloud, Fontainebleau, Saint-Germain-en-Laye, and Clagny. He went to Italy in 1679 and was received by the Pope with great friendliness. In Rome he laid out the gardens of the Vatican, the Quirinal, the Villa Albani, the Villa Ludovisi, and the Villa Doria Pamphili. His influence was felt in Germany and especially in England, where he designed the parks at Greenwich and Althorp, and St James's Park in London. Among the many honors which he received from Louis XIV was the Order of St. Michel in 1694.

LENOX. A town, widely known as a summer resort, including the villages of New Lenox and Lenoxdale, in Berkshire Co., Mass., 6 miles (direct) south of Pittsfield, on the New York, New Haven, and Hartford Railroad (Map. Massachusetts, A 3). Lenox itself is of great beauty, and the surrounding region has many places of interest. Among the attractions are Mahkeenac and Laurel lakes, Bald Head, the Pinnacle, and Yokum's Seat, besides many fine residences and Trinity School, and Lenox Library. Hawthorne, Henry Ward Beecher, and Fanny Kemble were residents of Lenox. The town was administered by town meetings. Settled in 1700, Lenox was incorporated as a district in 1767, and named in honor of Charles Lennox, Duke of Richmond. Pop., 1900, 2942. 1910, 3060.

LENOX, JAMES (1800-80). An American philanthropist, born in New York City, where his father, a wealthy Scottish merchant, had settled in 1784. He studied at Columbia, was admitted to the bar, and for a time was connected with his father in business; but the great passion of his life was collecting books and objects of art. During the years that he was most actively engaged in this work, his library grew so rapidly that it was impossible for him to arrange it systematically, and the books as they were received and checked off were stored in the vacant apartments of his residence. This, of course, rendered it exceedingly difficult to find particular volumes, and as he refused to allow others access to his storeroom, the library remained practically unused until it was removed to the building at Fifth Avenue and Seventieth Street which he erected for its reception in 1870. On May 23, 1895, the Lenox Library was consolidated with the Astor Library and the Tilden Trust to form the New York Public Library (q.v.). The Lenox Library building was torn down in 1913 to make way for Mr. Henry C. Frick's new residence. Besides giving his library to the city of New York, Mr. Lenox contributed generously to the Presbyterian Hospital in that city, to Princeton University, and to many public and private charities.

LENS, lĕns. A town of France, in the De-

partment of Pas-de-Calais, on the Deûle, 17 miles south-southwest of Lille (Map: France N., H 2). It is a place of great antiquity and was once strongly fortified. It is located in the midst of the coal deposits of Pas-de-Calais, has engineering works, iron and steel foundries, and manufactories of beet sugar, soap, and wire rope. In the vicinity are highly productive coal mines. Pop., 1901, 24,370; 1911, 31,746. It is famous for the victory gained by Louis II of Bourbon, Prince of Condé, over Leopold William, Archduke of Austria, under its walls in 1648. During the European War which began in 1914, Lens and the surrounding region were almost a continual battlefield. The town itself was taken by the Germans and compelled to pay a heavy indemnity. See WAR IN EUROPE.

LENS, lĕnz (Neo-Lat., from Lat. *lens*, lentil; so called on account of the shape of the lens). Broadly speaking, a circular section of a transparent substance, having its surfaces either both spherical or one of them plane and the other spherical. Lenses are either convex (thickest in the middle) or concave (thickest at the edges), and a ray of light in passing through a lens is bent towards its thickest part. The former class changes the direction of the rays by making them more convergent than before; the latter makes them more divergent. The point to which the rays converge, or from which they diverge, is called a *focus*—*principal focus* when the rays are parallel. The focus for a convex lens is real, i.e., the rays actually pass through it, form a real and inverted image smaller or larger than the object, according as the object is at a distance greater or less than twice the focal length; but if the object be within the principal focal length a virtual image is formed, erect and magnified. For a concave lens the focus is virtual; the rays seem to come from it and form an erect image smaller than the object. See LIGHT, where a section is devoted to lenses and the various theoretical questions involved are discussed. For different forms of lenses as used in various optical instruments, see MICROSCOPE; PHOTOGRAPHY; TELESCOPE, etc. See, also, ABERRATION, SPHERICAL; ABERRATION, CHROMATIC. Consult: Thomas Preston, *Theory of Light* (London, 1901); R. T. Glazebrook, *Physical Optics* (New York, 1907); R. W. Wood, *Physical Optics* (ib., 1911).

LÉNSTRÖM, lĕn'strĕm, CARL JULIUS (1811-93). A Swedish poet and critic, born at Gefle. He studied philosophy and theology at Upsala, took orders in 1834, and taught literature at the University of Upsala from 1836 to 1843. During the next two years he taught philosophy at Gefle. In 1845 he was appointed rector at Vester-Löfsta. He wrote on philosophy, poetry, theology, and æsthetics, and his principal publications include a compendium of the Church history of his country, *Lärobok i allmänna och svenska kyrkohistorien* (1843); contributions to the history of Swedish æsthetics, *Bidrag till den svenska æstetikens historia* (1840); *Färljuvelen* (1838), a novel; *Cromwell* (1860), a poem, *Gustaf II. Adolf* (1860), poems; and some sketches, *De fyra stånden, taflor ur svenskt sedelif* (1865).

LENT (AS. *lenoten*, *lengten*, OHG. *lensin*, *lengizin*, *lenso*, Ger. *Lenz*, spring, from AS. *long*, OHG., Ger. *lang*, Lat. *longus*; so called from the lengthening days in spring). The season of fast-ing observed before Easter in the Roman Catho-

lic, Eastern, and Anglican churches. Its length has varied considerably in different times and places. Before the third century there is positive evidence of the solemn observance everywhere of the last two days of Holy Week, and it gradually spread to include the whole week. But aside from this solemn fast, Athanasius urges upon the Alexandrians a forty days' fast as being the custom elsewhere, and the Council of Niceæ (325) recognizes it as an established custom. The period of 40 days was adopted in commemoration of the fasting of Christ, as well as Moses and Elijah, for that length of time. In the early Church the primary idea was penitence, and fasting was incidental. In the mediæval Church the fasting became very strict, including abstention from all meat, milk and its products, and eggs, and from all food till evening. Gradual relaxations were permitted, until now the fast of lent is more nominal than real. See EASTER; FAST; HOLY WEEK.

LENT'HALL, WILLIAM (1591-1662). An English politician. He was born at Henley-on-Thames, studied at Oxford, and was called to the bar in 1616. He represented Woodstock in the Short Parliament of 1640 and in the Long Parliament, serving as Speaker from 1640 to 1653. In 1643 he was appointed Master of the Rolls and in 1646-48 was one of the commissioners of the great seal. When Cromwell as Protector summoned his first Parliament, Lenthall was again chosen to the chair (1654), and was a member of the Parliament of 1656 also. On the reassembling in 1659 of the Long Parliament, he resumed his former position, and, convinced of the inevitability of the Restoration, subsequently aided in bringing it about. His career, admittedly successful as Speaker because of his pliability in troublous times, was attacked by contemporaries on the ground of loyalty; on the other hand, his refusal to indicate whether or not the five accused members in the House of Commons were present when in 1642 the King attempted to arrest them, was appreciated by Parliament and made him famous.

LENTICELS (Fr. *lenticelle*, dim. of *lenticule*, lens-shaped, lentil-shaped, from Lat. *lenticula*, lentil, dim. of *lens*, lentil). Roundish or elongated corky patches of various sizes, usually projecting a little above the epidermis of stems. Where cork formation (bark) is going on, at certain points corresponding usually . . . to the stomata (breathing pores) of the epidermis, the cork cells become rounded and loosened from one another. Under the strain the epidermis ruptures, and the powdery mass of cells is exposed, through a usually biconvex rift, whose shape suggested for the structure the name lenticel. Lenticels are present in all the great groups of vascular plants, and very few plants with a regular annual formation of cork fail to show them. They are most conspicuous on young shoots, but in some cases, as in the birch, they become more prominent as they grow older. The lenticels that are developed at a point early determined by a stoma, a root, or a bud, are called primary lenticels; while those which are formed later, and at a point not determined by an organ, are called secondary. Lenticels serve to admit air to the living internal tissues, through an impervious corky layer, and they vary in porosity in different plants and at different seasons. See AERATION.

LENTIGO. See FRECKLES.

LENTIL (OF. *lenticille*, from Lat. *lenticula*,

dim. of *lens*, lentil), *Vicia hirsuta*, or *Lens esculenta*. An annual leguminous plant, related to tares (see TARE), a native of the Mediterranean region. It is extensively cultivated in the south of Europe, in Egypt, in the East, and to some extent in other parts of the world. It has a weak, branching stem, from 6 to 18 inches high, and pinnate leaves with 6 to 8 pairs of leaflets and terminal tendrils. The flowers are small, white, lilac, or pale blue. The pods are very short and blunt, thin and smooth, and contain two seeds shaped like a double convex lens. There are numerous varieties, with white, brown, and black seeds, of various sizes, the largest being about half an inch in diameter. The lentil grows best in a light and rather dry soil; in a very rich soil it produces comparatively few pods.

LENTIL.

Unlike the pea and the bean, the lentil is eaten only when fully ripe. The brown or reddish lentil is smaller than the yellow, but of more delicate flavor. It is one of the most ancient of food plants—probably one of the first to be brought under cultivation by man. Since it has been grown from early times in Asia and in the Mediterranean countries, it seems probable that the reddish Egyptian lentil was the "red pottage" of Esau. In Europe this legume is far less grown than the pea and the bean, partly because its yield of seed and straw is less. The market is partially supplied from Egypt. The lentil, according to analysis, is one of the most nutritious of all the legumes, but its flavor is pronounced and to some persons not so agreeable as that of the pea and the bean. Its seeds have the following percentage composition: water, 8.4; protein, 25.7; fat, 1; carbohydrates, 59.2; and ash, 5.7, the fuel value being 1620 calories a pound. Like all legumes used as food, they are especially rich in protein. It is generally used for soup or purée. In the Mediterranean countries it is often eaten roasted. It has been little known in the United States, but with the growth of the foreign population its use has steadily increased. The lentils found in our markets are all imported, but the culture of this legume from European seeds is being tried in the Southwestern Territories and elsewhere. A small variety of lentil is already grown in New Mexico and Arizona as well as in Mexico, the seed of which was doubtless brought from Spain centuries ago by the ancestors of the present mixed race living there. See LATHYRUS.

LENTINI, lèn-tě'ně (Lat. *Leontini*). A city in the Province of Syracuse, Sicily, 18 miles by rail south of Catania (Map: Italy, E 6). The centre of the city is 3 miles from the railway station, and 6 miles from the coast. To the north lies Lake Lentini, from 9 to 12 miles in circumference, according to the height of the water. It did not exist in ancient times, but is now the largest body of standing water in Sicily, and its vapors make the city unhealthful

in summer. Lentini is a market for rice and other grain, oil, wine, flax, cattle, and for water-fowl and fish from the lake. It also manufactures pottery. The ancient Leontini was founded in 729 B.C., by colonists from Naxos and was the birthplace of Gorgias, the sophist and orator, who persuaded Athens to intervene in Sicily. Pop. (commune), 1901, 17,134, 1911, 22,904.

LENTINO, lén-tě'nó, JACOPO DA. One of the early Italian poets of the Sicilian school who lived during the first half of the thirteenth century. He is presumed to have studied at Bologna and lived in Tuscany for at least a part of his life. He is spoken of by Dante in doubtful terms (*Purgatory*, c. xxiv) for the carelessness of his language, but some of his poems, translated by Rossetti in *Dante and his Circle*, have much charm. Consult Gaspary, *Die siciliansche Dichterschule des dreizehnten Jahrhunderts* (Berlin, 1878), and a critical edition of poems, by Langley (Boston, 1915).

LENTO, lén'tó (It., slow). In music, a term indicating a tempo between grave (q.v.) and adagio (q.v.).

LENTULUS. A well-known cognomen of the Gens Cornelia in ancient Rome. The best-known members of this branch of the famous patrician gens were the following. 1. P. CORNELIUS LENTULUS SURA, quaestor under Sulla in 81 B.C., praetor in 75, and consul in 71. In 70 B.C., along with many others, he was expelled from the senatorial order by the censors, for his vices. He became praetor again in 63 B.C., the year of Cicero's consulship, when he joined in Catiline's conspiracy and was the leader of the conspirators within the walls when Catiline left to take the lead in the field. Cicero, however, obtained full proofs of the conspiracy from the ambassadors of the Allobroges; and when Lentulus and his comrades were confronted with the evidence, they were forced to confess their guilt. Lentulus himself resigned his office and was put to death along with the other leaders in the Tullianum. Consult the third and fourth *Catullianum Orations* of Cicero. 2. P. CORNELIUS LENTULUS SPINTHER, a friend of Cicero, only a very distant relative of the above. He was curule aedile in 63 B.C. (the year of Cicero's consulship), the conspirator Lentulus was given into his custody after his arrest. He was praetor in 60 B.C. and consul in 57, when he procured Cicero's recall from exile. From 56 to 53 he was governor of Cilicia and Cyprus. In the following years he followed the fortunes of Pompey. We have no sure knowledge of the end of his life. 3. P. CORNELIUS LENTULUS CRUS, or CRUSCELLO, chief accuser of Publius Clodius in connection with the violation of the rites of the Bona Dea. (See *CLODIUS PULCHER*.) As consul in 49 B.C., he bitterly opposed all attempts to reach a peaceful settlement with Caesar. When Caesar crossed the Rubicon, however, Lentulus fled to Greece. After Pompey's defeat at Pharsalus, Lentulus fled to Rhodes, Cyprus, and finally Egypt, where he was put to death by Ptolemy. 4. Son of 2, of the same name, also a follower of Pompey. Pardonned by Caesar, he finally joined Brutus and Cassius in their campaigns and coined silver money for the payment of their troops, specimens of which are common.

LENZ, lén-ts, JAKOB MICHAEL REINHOLD (1751-92). A German poet and dramatist, born at Seeswegen, Livonia. After studying at Königsberg he went to Strassburg in 1771 as tutor

to two young noblemen from Courland. At Strassburg he allied himself to the literary coterie of which Goethe was a member. In 1776 he followed Goethe to Weimar, where, despite his friends' remonstrances, he showed such utter disregard for social conventions that he was continually in trouble. Finally he was banished from Weimar, wandered in various countries, became insane, and died an object of charity in Moscow. Lenz was one of the most typical examples of the poets of the Storm-and-Stress Period. In his works he railed against the blind servitude to French classicism, in his life he proclaimed the right of nature against conventionality. He was a gifted but wayward writer. He has been ranked next to Goethe—*longo aed proximus intervallo*, however, as Erich Schmidt has written—among the dramatists of the Storm-and-Stress. His *Der Hofmeister* and some of his lyrics were by many of his contemporaries attributed to Goethe. His shorter poems often contain passages of exquisite lyric beauty. Consult Ludwig Tieck, *Gesammelte Schriften von Lenz* (Berlin, 1819); Erich Schmidt, *Lenz und Klinger* (ib., 1878); Johann Fritzsche, *Lenz und Goethe* (Strassburg, 1891); M. N. Rosanow, *J. M. R. Lenz, Leben und Werke*, German translation by Gützw (Leipzig, 1909). Among his dramas may be mentioned *Der Hofmeister* (1774), *Die Soldaten* (1776), and the dramatic sketch *Pandemonium germanicum* (1819).

LENZ, Max (1850-). A German historian. He was born at Greifswald and studied at Bonn, Greifswald, and Berlin. In 1881 he was made professor of mediæval and modern history at Marburg, seven years later went to Breslau, and in 1890 to the University of Berlin, of which he was rector in 1911-12. Among his works may be mentioned: *Drei Traktate aus dem Schriftenszyklus des Konstanzer Konzils untersucht* (1876); *Die Schlacht bei Mühlberg* (1879); *Briefwechsel Landgraf Philipps des Grossmütigen von Hessen mit Bucer* (3 vols., 1880-91); *Martin Luther* (1883; 3d ed., 1897); *Zur Kritik der Gedanken und Erinnerungen des Fürsten Bismarck* (1899); *Die grossen Nächte* (1900); *Geschichte Bismarcks* (1902; 3d ed., 1911); *Napoleon* (1905; 2d ed., 1908); *Geschichte der Universität Berlin* (4 vols., 1910).

LENZ, OSKAR (1848-). A German geographer and explorer, born in Leipzig and educated in the university there (1866-70). As a member of the Austrian Geological Institute, he went on geological expeditions in Croatia, Hungary, and Bohemia, and assisted Hochstetter in preparing *Die zweite deutsche Nordpolfahrt* (1874). In 1874 he went on a scientific expedition for the German African Company and spent three years in West Africa. On a second journey, in 1880, he crossed the western Sahara in the disguise of an Arab merchant, reaching Timbuktu. In 1886 he undertook an expedition for the relief of Junker, Casati, and Lupton, who were penned up by the Mahdi revolt. On this journey he made valuable discoveries in East Africa, especially around the sources of the Nile. He returned to Austria in 1887 and became professor of geography in the German University of Prague, where he was rector in 1902-03. He retired in 1909. His African tours are described in *Skizzen aus Westafrika* (2d ed., 1878); *Timbuktu: Reise durch Marokko, die Sahara und den Sudan* (2 vols., 1884), which contains many valuable contributions to our

knowledge of the Sahara; and *Wanderungen in Afrika* (1895). His later works are: *Die sogenannten Zwergvölker Afrikas* (1894); *Ueber Geld bei Naturvölkern* (1895); *Ophir und die Ruinen bei Simbady* (1896); "Geographie von Afrika," in Andree, *Handbuch der Geographie* (1899); *Marokko, Geschichte, Land, und Leute* (1907).

LEO (Lat., lion). The fifth sign of the zodiac through which the sun moves during the latter part of July and the early part of August; its conventional symbol is ♌. It is also the name of a zodiacal constellation lying to the south of Ursa Major and immediately north of the equator. Its two brightest stars are α Leonis, or Regulus, a helium star of magnitude 1.3, lying almost on the ecliptic, and β Leonis, or Denebola, a blue star of magnitude 2.2.

LEO. The name of 13 popes.—**LEO I, SAINT** (Pope, 440–461), surnamed "the Great," one of the most eminent of the Latin fathers. He was born in Tuscany. By Pope Celestine I (422–432) he was made one of the seven Roman deacons. His influence is attested by Cassian's dedication to him of his *De Incarnatione contra Nestorium* (430), and Cyril of Alexandria appealed to his aid against Bishop Juvenal of Jerusalem, who desired to be made a patriarch (431). The Emperor Valentinian III sent him on an embassy to Gaul, while absent on which he was elected Pope. Leo's letters, addressed to all parts of the Church, exhibit prodigious activity and zeal, and are used by Catholic controversialists as an evidence of the extent of the jurisdiction of the Roman see at this early time. In a council held at Rome in 449 he set aside the proceedings of the so-called Robber Synod of Ephesus, which had been held that year and had pronounced in favor of Eutyches (q.v.), summoned a new council at Chalcedon, in which his legates presided, and in which Leo's celebrated "dogmatical letter" was accepted "as the voice of Peter" and adopted as the authentic exposition of the orthodox doctrine on the person of Christ. The history of Leo's interposition with Attila (452) in defense of the Roman city and people will be found in the article **ATTILA**; and his subsequent similar interposition with Genseric (455), if less dramatic in the incidents with which history or legend has invested it, was at least so far successful as to save the lives of the citizens, and the public and private buildings of the city of Rome. He formulated clearly the monarchical idea of the papacy, which he conceived to be built upon Peter and the divinely constituted head of the Christian world. Accordingly he acted consistently in the character of universal bishop. He regulated affairs in Africa no less than in Gaul and Spain. When he found that the Council of Chalcedon (451) had put Constantinople above all other apostolic patriarchates, he required the Emperor to cancel the offensive 28th canon, and as the Emperor declared that its confirmation depended upon the Pope, Leo asserted that the Greeks had given it up. Leo endeavored to extirpate heresy (Manichæism, Priscillianism), but rather unsuccessfully. He died in Rome, Nov. 10, 461. His day is April 11 in the Latin church, and February 18 in the Greek church. His sermons and letters, of great interest and value, are in Migne, *Patrologia Latina*, liv–lvi, and a partial English translation in *Nicene and Post-Nicene Fathers*, 2d series, xii.

Langen, *Geschichte der römischen Kirche von Leo I. bis Nicolaus I.* (Bonn, 1885); H. K. von Hefele, *History of the Christian Councils*, vols. iii–iv (Edinburgh, 1882, 1895); H. H. Milman, *History of Latin Christianity*, vol. i (New York, 1903).

LEO II, SAINT (Pope, 628–683). He was born in Sicily. He confirmed the canons of the Council of Constantinople (680–681), and the condemnation of Pope Honorius for "not extinguishing the flame of incipient heresy." He succeeded in healing the schism between the sees of Rome and Ravenna, through an arrangement by which the bishops of Ravenna were to be ordained at Rome and to be excused from the payment of the money fee previously exacted from them. He was the friend and patron of Church music and aided in the improvement of the Gregorian chant. His day is June 28. His letters are in Migne, *Patrologia Latina*, xcvi. Consult: H. K. von Hefele, *History of the Christian Councils*, vol. v (Edinburgh, 1896); H. K. Mann, *Lives of the Popes in the Early Middle Ages*, vol. i (London, 1902); H. H. Milman, *History of Latin Christianity*, vol. ii (New York, 1903).

LEO III (Pope, 795–816). His pontificate is chiefly remarkable as the epoch of the establishment of the new Empire of the West. He was a native of Rome. During the greater part of the eighth century the popes, through the practical withdrawal of the Byzantine emperors, had exercised a temporal supremacy in Rome, which was fully recognized by the gift of Pepin, the pontiffs being placed under the protectorate of the Frankish sovereigns, who received the title of patrician. The pontificate of Leo, however, was a troubled one, and in 799 he was nearly killed in a brutal attack and obliged to flee to Spoleto, whence he afterward repaired to Paderborn, in order to hold a conference with Charlemagne. On his return to Rome he was received with much honor by the Romans, and the chiefs of the conspiracy against him were sentenced to banishment. In the following year (800) Charlemagne, having come to Rome, was solemnly crowned and saluted Roman Emperor by the Pope, and the temporal sovereignty of the Pope over the Roman city and state, though under the suzerainty of the Emperor, was formally established. In 804 Leo visited Charlemagne at his court at Aix-la-Chapelle. With Charlemagne's successor, Louis le Débonnaire, Leo was embroiled in a dispute about the right of sovereign jurisdiction in Rome, which had not been brought to a conclusion when Leo died in Rome, May 25, 816. Consult: Ferdinand Gregorovius, *History of the City of Rome*, vol. ii (London, 1894); H. K. Mann, *Lives of the Popes in the Early Middle Ages*, vol. ii (ib., 1902–06), his letters in Migne, *Patrologia Latina*, cii.

LEO IV, SAINT (Pope, 847–855). He was a native of Rome. He built a new Roman suburb, occupying four years in the task, and it was named in his honor *Civitas Leonina*. He also restored Porta, a town near the mouth of the Tiber, where he colonized several thousand Corsicans who had been driven from their own country by an inroad of Saracens. He also founded a new town which was called Leopoliis, since destroyed. Consult: Ferdinand Gregor-

vius, *History of the City of Rome*, vol. iii (London, 1895); H. K. Mann, *Lives of the Popes in the Early Middle Ages*, vol. ii (London, 1902-06); H. H. Milman, *History of Latin Christianity*, vol. iii (New York, 1903); his works in Migne, *Patrologia Latina*, cxv, cxxix.

LEO V (Pope, 903), LEO VI (Pope, 928-929), LEO VII (Pope, 936-939). All these three held office in the darkest times of the papacy, when it was under the domination of turbulent and ambitious secular lords and women. Leo VII is said to have been a man of great personal holiness and austerity, and to have done much to restore monastic discipline. His letters are in Migne, *Patrologia Latina*, cxxxi. For the lives from Leo V to Leo VII consult: Ferdinand Gregorovius, *History of the City of Rome in the Middle Ages*, vol. iii (London, 1895); H. H. Milman, *History of Latin Christianity*, vol. iii (New York, 1903); H. K. Mann, *Lives of the Popes in the Early Middle Ages*, vol. iv (London, 1910).—LEO VIII (Pope, 963-965). These dates, however, must be taken with the qualification that his title to the papacy was not good until after the abdication in June, 964, of Benedict V, the legitimate successor of John XII, in whose place Leo was put by the Emperor Otto I.—LEO IX, SAINT (Pope, 1049-54). Bruno, son of Count Hugh of Egisheim, a cousin of the Emperor Conrad II. He was born in 1002 at Egisheim in Alsace and became a canon and then Bishop of Toul. He was instrumental in the negotiation of four treaties between the emperors and the kings of France, and was elected Pope by the influence of Henry III. He was a man of great erudition, and did much to correct abuses. His steadfast assertion of the prerogatives of his office was a preparation for the conflict waged by Henry VII against the Empire. He supported the Greek Emperor in southern Italy against the Normans, by whom he was captured and detained, though with every mark of respect, for nine months. Restored to Rome on becoming dangerously ill, he died in 1054, recognized already, by popular consent, as a saint. His day is April 19. His letters are in Migne, *Patrologia Latina*, cxlii. Consult: Hunkler, *Leo der Neunte und seine Zeit* (Mainz, 1851); J. I. Müller, *Geschichte der römischen Kirche*, vol. iii (Bonn, 1892); Ferdinand Gregorovius, *History of the City of Rome*, vol. iii-iv (London, 1895-96); H. H. Milman, *History of Latin Christianity*, vol. iii (New York, 1903); H. K. Mann, *Lives of the Popes in the Early Middle Ages*, vols. iv-vi (London, 1910).

LEO X (Pope, 1513-21). Giovanni de' Medici, the son of Lorenzo the Magnificent. He was born in Florence in 1475 and destined in childhood for an ecclesiastical career. His education was entrusted to the ablest scholars of the age; and through the influence of his father with Pope Innocent VIII he was created Cardinal at the age of 13 years, in 1488. In the expulsion of the Medici from Florence, in 1494, the young Cardinal was included, and he used the occasion as an opportunity of foreign travel. He was employed as legate by Julius II; and during the war with the French he was taken prisoner in the battle of Ravenna, but soon afterward effected his escape. On the death of Julius II, in 1513, he was chosen Pope at the early age of 37, and took the name of Leo X. His first appointment of the two great scholars Bembo and Sadoleto as his secretaries was a pledge of the

favor towards learning which was the characteristic of his pontificate; but he did not neglect the more material interests of the Church and the Roman see. He brought to a successful conclusion the Fifth Council of the Lateran and averted the schism which was threatened by the rival Council of Pisa. At the beginning of his reign his forces aided in driving the French from Italy, although in 1515 the new King, Francis I, restored the fortunes of France. In 1516 Leo concluded a concordat with Francis, which continued to regulate the French church till the Revolution. In the political relations of the Roman see he consolidated, and in some degree extended, the reconquests of his warlike predecessor, Julius II, although he used his position and his influence for the aggrandizement of his family. His desertion of the alliance of Francis I for that of his young rival, Charles V, although the subject of much criticism, was dictated by a sound consideration of the interests of Italy. But it is most of all as a patron of learning and art that the reputation of Leo has lived with posterity. Himself a scholar, he loved learning for its own sake, and his court was the meeting point of all the scholars of Italy and the world. He founded a Greek college in Rome, and established a Greek press, which he endowed munificently. (See LASCARIS.) In the encouragement of art he was no less munificent. Painting, sculpture, architecture, were equally favored; and it is to his vast project for the rebuilding of St. Peter's, and to the step to which he had recourse for procuring the necessary funds—his permitting the preaching of an indulgence, one of the conditions of obtaining which was the contribution to this work—that the first rise of the Reformation in Germany is ascribed. He himself seems to have regarded the movement as of little importance, describing it as "a squabble among the friars." In 1520 he issued a bull of excommunication against Luther, which the Reformer burned. Leo X's personal habits were in keeping with his taste, splendid and munificent in the highest degree. In his moral conduct he maintained a strict propriety, although he was not free from the stain of nepotism, the vice of that age, and his character was more modeled on the ideal of an enlightened prince than on that of a zealous and ascetic churchman. In days when the spiritual authority of the papacy was being questioned, his secular character was a great disaster to the Church. His death, which occurred rather suddenly on Dec. 1, 1521, during the public rejoicings in Rome for the taking of Milan, was by some ascribed to poison; but there seems no solid reason for the suspicion.

Bibliography. *Leonis X, Regesta*, ed. by Cardinal Hergenröther (8 vols., Freiburg, 1884-91); William Roscoe, *Life and Pontificate of Leo X* (2 vols., New York, 1886); F. S. Nitti, *Leone X e la sua politica* (Florence, 1892); Conforti, *Leone X ed il suo secolo* (Parma, 1896); Mandell Creighton, *History of the Papacy*, vol. vi (London, 1901); Ludwig Pastor, *History of the Popes*, vol. vii (3d ed., ib., 1908); *Cambridge Modern History*, vol. ii (Cambridge, 1914); H. M. Vaughan, *The Medici Popes* (New York, 1908).

LEO XI (Pope, 1605). Alessandro Ottaviano de' Medici. He was born in Florence in 1535 and made Bishop of Pistoia in 1573, Archbishop of Florence and Cardinal in 1574, holding later the cardinal-bishoprics of Albano and Palestrina.

Clement VIII intrusted him in 1596 with the difficult mission to the court of France, soon after the conversion of Henry IV, and he acted for the holy see in the conclusion of the Peace of Vervins. He became Pope on April 1, 1605, but reigned only 26 days. Consult Leopold von Ranke, *History of the Popes*, vol. ii (London, 1908).

LEO XII (Pope, 1823-29). Annibale della Genga. He was born near Spoleto in 1760 and educated in Rome for the priesthood, which he received in 1783. After serving as chamberlain and secretary to Pius VI he was made titular Archbishop of Tyre in 1793 and appointed Nuncio at Cologne, though the fortunes of war obliged him to change his residence several times. Under Pius VII he was employed on diplomatic missions in Germany, and after Napoleon's fall was the bearer of the Pope's congratulations to Louis XVIII. He was made Cardinal in 1816, and held the bishopric of Sinigaglia until 1820, when he returned to Rome as Cardinal Vicar. In 1823 he was elected to succeed Pope Pius VII. His pontificate was marked by great zeal for the welfare of the Church, both in Europe and abroad, and by great efforts to reform the abuses of the Church. Consult: Artand de Montor, *Histoire du pape Léon XII* (2 vols., Paris, 1843); N. P. S. Wiseman, *Recollections of the Last Four Popes* (London, 1858); F. Nippold, *The Papacy in the XIX Century* (New York, 1900); F. K. Nielsen, *The History of the Papacy in the XIX Century* (ib., 1906); *Cambridge Modern History*, vol. x (Cambridge, 1907).

LEO XIII (Pope, 1878-1903). Gioacchino Vincenzo Raffaello Luigi Pecci. He was born in the ancestral seat of his family at Carpineto, 37 miles from Rome, March 2, 1810, and educated in the Jesuit college at Viterbo and the Collegio Romano, making further studies in law and theology after taking his doctor's degree from the latter. He was ordained priest and made a domestic prelate by Gregory XVI in 1837. As delegate successively at Benevento, Spoleto, and Perugia, he displayed great energy, and was especially successful in the task of suppressing brigandage. In 1843 he was made Archbishop of Damietta *in partibus*, and sent as Nuncio to Brussels, where he exercised a powerful influence in the support of the Church against secularist attacks. At the end of 1845 he was recalled to undertake the administration of the see of Perugia, and made his entry there the following summer amid universal rejoicings. He ruled his diocese with great zeal, promoted education, and cared for the material wants of the poor by founding *monti di pietà* (loan associations under ecclesiastical direction). The year of revolutions (1848) brought many troubles to the Church in Perugia as elsewhere, which were met by the Archbishop with increased zeal and devotion. His services were recognized by Pope Pius IX, who made him Cardinal in 1853, carrying out an intention expressed by Gregory XVI before his death. He was not, however, prominent in the papal councils, being supposed to be hardly a *persona grata* to the powerful Antonelli. He continued his labors at Perugia under difficulties which increased after the annexation of Umbria to the dominions of Victor Emmanuel in 1860 and the promulgation of numerous laws inimical to religious interests. He raised his voice in energetic protest against what he considered the spoliation of the Church and against tampering with the law of marriage

and declined to join in a public reception to Victor Emmanuel when he visited Perugia. In 1877 he was brought to Rome to fill the important office of Cardinal Camerlengo, and a few months later, on the death of Pius IX, was called upon to perform the administrative functions attached to it during a vacancy in the holy see. On Feb. 20, 1878, he was chosen to fill the vacancy, taking the title of Leo XIII in imitation of the Pope of his boyhood.

The combined learning, holiness, and statesmanlike sagacity displayed by him made his long, almost unprecedented reign one of the most notable in the recent history of the Church. The great causes to which he devoted the last quarter century of his life are best marked by the numerous well-considered encyclicals in which he spoke through the Catholic hierarchy to the world. His first dealt with the study of theology and commended the system of St. Thomas Aquinas, the study of whose works he did all in his power to encourage, as the best means of meeting the needs of modern philosophy. In later ones he dealt acutely and broadly with social questions, the famous *Rerum Novarum* of 1891 being regarded as going a long way to meet the claims of modern socialism. Those on Christian marriage (1880) and on Freemasonry (1881) were more on traditional lines, but one which commended the diligent study of the Bible (1893) and those of 1894 and 1896 on the reunion of Christendom were of a nature to surprise and conciliate those who had no accurate knowledge of the teaching of the Roman Catholic church. The restoration of Christian unity had always been specially near his heart. He displayed a particular interest in the English-speaking race, addressing a letter *ad Anglos* in 1894; and the decision of the commission which in 1896 pronounced that Anglican ordinations were invalid had an important bearing on the attitude of the High Church party towards Rome. His recognition of the importance of this race, especially in the New World, was marked by the establishment of a permanent representative in the United States and one in Canada who were responsible immediately to him.

He maintained the same attitude of his predecessor towards the Italian government, considering it as a usurper in Rome and himself as a prisoner in the Vatican. Elsewhere his general policy was to support existing governments whenever they stood for law and order. Thus, though with some difficulty, he persuaded French Catholics to support the Republic; and he condemned the Nationalist plan of campaign in Ireland. The Kulturkampf (q.v.) waged by the Prussian government against the holy see was brought to a close in 1887, the papacy issuing from it triumphant. Leo XIII reestablished the ancient hierarchy of Scotland in 1878, and also established one in India. His constant efforts were devoted to the promotion of peace in the temporal order throughout the world; in 1885 he was able to secure it in a definite case by acting as arbitrator in the dispute which arose between Germany and Spain concerning the Caroline Islands. His life was of the simplest and most abstemious description, which doubtless had much to do with its prolongation. His interest in science and literature was always great, and marked, e.g., by the provision of large sums for the Vatican Observatory. In 1883 he threw open the Vatican archives to all properly

qualified scholars, expressing the conviction that the Church had nothing to fear from the study of the facts of history. His Latin style is of a high order, both in prose and verse; the composition of Latin poetry was one of his favorite relaxations. He died July 20, 1903. His pontificate was one of the longest in history, its silver jubilee having been celebrated on March 3, 1903.

Bibliography. Biographies by Bonghi (Città di Castello, 1884); Weinand (2d ed., Cologne, 1892); Hall (New York, 1899); Narfon (Eng. trans., London, 1899); Justin McCarthy (2d ed., London, 1903); B. An edition of his *Carmina* was published in 1883; also *Poems, Charades, and Inscriptions of Pope Leo XIII* (ed. Henry, Philadelphia, 1902). His encyclicals have been published in Latin and German (Freiburg, 1878-1904), also *The Great Encyclicals of Leo XIII*, ed. by Wynne (New York, 1902).

LEO I (c.400-474). Byzantine Emperor from 457 to 474. He was born in Thrace and ascended the throne at the close of the peaceful reign of Marcian, for, though only an obscure military tribune at the time, he was the favorite of the all-powerful Aspar, commander of the guards. He undertook, together with Anthemius, whom he had made Emperor of the West, an expedition to reconquer Africa, which at this time was held by the Vandals under Genseric (q.v.). The Roman fleet was destroyed by fire ships. Aspar, being an Arian, was unpopular, and hence was suspected by the people of having had treasonable dealings with the Vandals, who were also Arians. Leo, glad of the opportunity to get rid of his too powerful subject, had him treacherously murdered in 471. Leo has been generally called the Great, but this title was given to him merely on account of his orthodoxy. With more justice the Arians surnamed him Makelles (butcher). In 473 he associated with himself his grandson, Leo II, who, however, survived him only a few months. Consult: J. B. Bury, *Later Roman Empire*, vol. i (New York, 1899); *Cambridge Medieval History*, vol. i (ib., 1911); Edward Gibbon, *Decline and Fall of the Roman Empire*, vol. iv (ed. by J. B. Bury, London, 1912).

LEO III (c.680-740). Byzantine Emperor from 717 to 740. He was surnamed "the Isaurian" from his birthplace. Originally his name was Conon, which he dropped in later life. Early in life he had distinguished himself as a soldier. Anastasius II appointed him in 713 general of the Anatolic theme. After the deposition of Anastasius by Theodosius III, Leo overthrew the usurper, and assumed the crown, in March, 717. He was scarcely seated on the Imperial throne when the forces of the Caliph Solyman laid siege to Constantinople by land and sea; this siege lasted for over a year, but was finally raised through the energy of Leo. In the great battle of Acroinon, in 739, he destroyed a large Mohammedan army and checked for many years the advance of Islam. He made many administrative reforms, completed the reorganization of the themes, reconstituted the army, placed the finances upon a firmer basis,

and published codes of law for the army, for agriculture, and for commerce, as well as the civil code, the *Ecloga*. He is best remembered, however, by his strife against the use of images in the churches. (See *IMAGE WORSHIP*.) Leo's edict against the images caused insurrections in Greece, which were soon repressed; but in Italy the opposition, headed by the Pope, was more vigorous and could not be subdued. Leo retaliated by confiscating the lands of the papacy in the Greek Empire and by placing the whole of Sicily and southern Italy, which had previously been under the authority of the Pope, under the Patriarch of Constantinople. This caused almost a complete rupture between the Pope and the Emperor. Consult J. B. Bury, *Later Roman Empire*, vol. ii (New York, 1899), and Edward Gibbon, *Decline and Fall of the Roman Empire*, ed. by J. B. Bury, vol. v (London, 1912).

LEO V, FLAVIUS (?-820). Byzantine Emperor from 813 to 820. He was surnamed "the Armenian" from his native country. He rose to the rank of general and was raised to the Imperial office by the army. In 813 he decisively defeated the Bulgarians at Mesembria. He was an iconoclastic prince of the most pronounced type, caused the adoration of images to be abolished by the Second Synod of Constantinople in 815, and condemned to punishment those who persisted in it, exiling the Patriarch Nicephorus for the same cause. The weight of public sentiment was against him. He arrested Michael, surnamed "the Stammerer," who had engaged in treason, notwithstanding his former valuable services, and condemned him to death; but on Christmas, 820, while he was in the chapel of his palace, he was murdered by the adherents of Michael. His reign is remarkable chiefly for the strict discipline which was infused by him into the administration of the civil government. Consult J. B. Bury, *History of the Eastern Roman Empire* (New York, 1912).

LEO VI, FLAVIUS (866-911). Byzantine Emperor from 886 to 911. He was the son of Basil I, whom he succeeded. His reign was marked by a succession of reverses. Sicily was definitively lost, and the Empire was ravaged in many parts by the Mohammedans. Leo wrote poems and theological treatises, and he completed the law code known as the *Basilica*. He had been tutored in his youth by the famous Photius, Patriarch of Constantinople, whom, however, he deposed as soon as he assumed the reins of government. He was surnamed Sapiens (the Wise) and Philosophus, though with little reason. Consult: Hergenröther, *Photius, Patriarch von Constantinople* (3 vols., Regensburg 1867-69); C. W. C. Oman, *Byzantine Empire* (New York, 1892); Krumbacher, *Geschichte der byzantinischen Literatur* (2d ed., Munich, 1897).

LEO, LA'Ö, FRIEDRICH (1851-1914). An eminent German classical scholar, born at Regensburg. He studied at the universities of Göttingen and Bonn and was professor successively at Kiel, Rostock, Strassburg, Bonn, and Göttingen. He was editor of *Seneca Tragædia* (1878-79), *Venantii Fortunati Opera Poetica* (1881), *Plauti Comædia*, vols. i, ii (1895-96); author of *Plautinische Forschungen* (1895; 2d ed., 1912), *Die plautinischen Cantioa und die hellenistische Lyrik* (1897), *Die griechisch-römische Biographie nach ihrer literarischen Form* (1901), *Der Saturnische Vers* (1905), *Der Monolog in Drama* (1908), *Geschichte der Römischen Literatur*:

Erste Band, Die Archaische Literatur (1913), and numerous philological papers. For years he was an editor of the philological periodical *Hermes*. Consult: J. W. D. Ingersoll, in *The Classical Weekly*, vol. vii (New York, 1914); W. M. Lindsay, in *The Classical Review*, vol. xxviii (London, 1914); P. Wendland, *Rede auf Friedrich Leo* (Berlin, 1914); M. Pohlenz, *Neue Jahrbücher für das klassische Altertum* (1914).

LEO, HEINRICH (1799-1878). A German historian, born at Rudolstadt. He studied at Jena, where he took an active part in the student association of the period and later went to Göttingen, also to Italy. In 1828 he became professor of history at the universities of Berlin and Halle. Among his early publications were *Lehrbuch der Geschichte des Mittelalters* (1830), *Geschichte der italienischen Staaten* (1829-30), and *Zwölf Bücher niederländischer Geschichten* (1832-35). In his subsequent works he changed his position, adopted Hengstenberg as his leader, and energetically attacked the ideas of Hegel, which he had previously advocated. Under the influence of this reactionary tendency he wrote *Lehrbuch der Universalgeschichte* (3d ed., 1849-55) and *Vorlesungen über die Geschichte des deutschen Volks und Reichs* (1854-66). He also published some works on Old Saxon and Old English, e.g., his *Beowulf* (1839) and his *Angelsächsisches Glossar* (2 vols., 1872-77). Consult his autobiography, *Aus meiner Jugendzeit* (Gotha, 1880), and Julian Schmidt, *Geschichte der deutschen Litteratur von Leibniz bis auf unsere Zeit* (Berlin, 1886-96).

LEO, LEONARDO (1694-1744). An Italian composer, born at San Vito degli Schiavi (Naples). He studied music at Naples under A. Scarlatti and Fago and at Rome under Pitoni. After having been maestro to the cathedral in Naples and at Santa Maria della Solitaria he was appointed court organist. As a teacher in the Conservatory of St. Onofrio at Naples he trained many distinguished musicians; but he is famous as an operatic composer, although his Church music is superior to his dramatic. He wrote about 60 operas, of which *Piastrato* (1714) was the first and *La contessa dell' amore colla virtù* (1744) was the last. Of his sacred compositions, which include oratorios, masses, motets, hymns, magnificats, etc., the best known is a *miserere* for eight-part choir a *cappella*. This has been frequently reprinted, but the bulk of Leo's work is still in manuscript. Consult Giacomo Leo, *Leonardo Leo* (Naples, 1905).

LE'O AF'RICAN'US (Lat., Leo the African; Ar. AL-HASAN IBN MOHAMMED AL-WAZZAN) (c.1485-?). An Arabian traveler and geographer, born in Granada, Spain. On the expulsion of the Moors from Spain his parents went to Morocco, where he received an excellent education. When only 16 years old, he began his travels, which extended through northern and central Africa and western Asia. While returning by sea from Egypt in 1517 he was captured by pirates, who presented him to Pope Leo X. In Rome he learned Latin and Italian and, becoming a Christian, took the name Leo Joannes in honor of the Pope, who was his sponsor. At Rome he taught Arabic to Cardinal Egidio, the same who was taught Hebrew by Elias Levita. His work *Description of Africa* was for a long time the only source for the geography of the Sudan. It seems that he wrote it first in Arabic; but the original is no longer extant, and

the author translated it himself into Italian (published by Ramusio, 1550). A Latin version was published by Florianus (Antwerp, 1556; Zurich, 1559; Leyden, 1632); a French version by Jean Temporal (Lyons, 1556; reedited with notes by Ch. Shefer in *Recueil de voyages*, No. 15, Paris, 1898); and a German version by Lorschach (Herborn, 1805). He also wrote *Tractatus de Vitis Philosophorum Arabum*, published by Hottinger (Zurich, 1664). He died in Tunis after 1526.

LEOBEN, lā-ō-ben. A mining town in the Crownland of Styria, Austria, situated on the Mur, 44 miles northwest of Graz (Map: Austria-Hungary, D 3). It is surrounded by old walls with towers and has an interesting fountain. It has a famous academy of mining (1913, 426 students) and a higher Gymnasium. In the vicinity are extensive mines of lignite, also iron-works. Leather, vinegar, dyes, and flour are produced. A marble monument commemorates the signing here, April 18, 1797, of the preliminaries of peace between Austria and the French Republic, which led to the Treaty of Campo Formio (q.v.). Pop., 1900, 10,204; 1910, 11,025.

LEOBSCHÜTZ, lā-ōp-shütz. A town in the south of the Province of Silesia, Prussia, on the Zinna River, 20 miles north-northwest of Ratibor (Map: Germany, G 3). It has manufactures of machinery, woollens, linen, damask, large bells, bricks, lumber, glass, mineral water, malt, and beer. Pop., 1900, 12,627; 1910, 13,081. Leobschütz existed as early as the tenth century and was from 1524 to 1623 the capital of the Principality of Jägerndorf.

LEOCHARES, lē-ōk'ā-rēz (Lat., from Gk. Λεωχάρης). A famous sculptor, possibly an Athenian, who flourished about the middle of the fourth century B.C. That he worked much at Athens is shown by numerous inscriptions on the Acropolis that bear his name. One of his earliest works, the portrait of Isocrates, was made before 355 B.C., and he was one of the artists employed on the sculptures of the Mausoleum (q.v.), begun in 352 B.C. We hear of three statues of Zeus by him, one of which was subsequently placed on the Roman Capitol, where it is praised by Pliny as *ante cuncta laudabilem*. His most famous works seem to have been gold and ivory statues, executed for the royal family of Macedon, after the battle of Chæronea (338 B.C.). In the Philippeum at Olympia were five gold and ivory statues of Philip, Alexander, Olympias, Amyntas, the father of Philip, and his wife Eurydice. In collaboration with Lysippus (q.v.) he made the bronze group of the lion hunt of Alexander, which Craterus dedicated at Delphi in commemoration of his rescue of Alexander on such an occasion. Of this group the base, bearing an inscription, has lately been found. A reminiscence of this group seems preserved in a relief from Messene, now in the Louvre, and some authorities attribute one type of the portraits of Alexander to an original of Leochares. An undoubted copy of a work by this artist, though on a reduced scale, is the statuette group of "Ganymede Carried Off by the Eagle of Zeus," now in the Vatican. (For the original, consult Pliny, *Historia Naturalis*, xxxiv, 79.) Many very good authorities attribute to him the original of the Apollo Belvedere, and some also the Artemis of Versailles in the Louvre. Both these attributions are, however, doubtful.

Bibliography. Winter, in the *Jahrbuch des*

deutschen archäologischen Instituts, vol. vii (Berlin, 1892); Adolf Furtwängler, *Masterpieces of Greek Sculpture* (London, 1913); E. A. Gardner, *A Handbook of Greek Sculpture* (ib., 1911); H. H. Powers, *The Message of Greek Art* (New York, 1913); P. Gardner, *The Principles of Greek Art* (ib., 1914); the article "Leochares," in Friedrich Lübker, *Reallexikon des klassischen Altertums*, vol. ii (8th ed., Leipzig, 1914).

LEO DIACONUS (Lat., Leo the Deacon) (c.950-c.1000). A Byzantine historian. He was born at Calce in Ionia and came to Constantinople about 969, in which year he saw the deposition of Nicephorus Phocas. Twelve years afterward, as one of the court priests, he went with Basil II against the Bulgarians. His history contains valuable material for the years 959-973, but it is poorly written and patriotically partial. It is included in the Bonn *Corpus Historiæ Byzantinæ* (1828). Consult Ferdinand Hirsch, *Byzantinische Studien* (Leipzig, 1876), and Schlumberger, *Nicéphore Phocas* (Paris, 1890).

LEOMINSTER, lēm'stēr. A market town in Herefordshire, England, 12 miles north of Hereford, on the river Lug (Map England, D 4). It is the centre of one of the most celebrated cattle-breeding districts in Europe and has wool-stapling and leather establishments, manufactures of gloves and hats, and a trade in hops and cider. The town maintains markets and a free library. The parish church of SS. Peter and Paul, one of the finest in England, exhibits every style of architecture from Norman to Perpendicular. It also contains an ancient ducking stool. Leominster originated in a Saxon monastery and received its charter of incorporation from Queen Mary. Pop., 1901, 5900, 1911, 5737.

LEOMINSTER, lēm'in-stēr. A town, including several villages, in Worcester Co., Mass., 5 miles south-southeast of Fitchburg, on the Nashua River, and on the New York, New Haven, and Hartford and the Boston and Maine railroads (Map Massachusetts, D 2). It has a large public library, fine town hall and high-school buildings, and a park. The principal manufactures include piano cases, baby carriages, shirts, buttons, combs, horn goods, furniture, woolen goods, leatherboard, paper, paper boxes, chemicals, toys, novelties, etc. The government is administered by town meetings. The water works are owned and operated by the municipality. Pop., 1900, 12,392; 1910, 17,580; 1914 (U. S. est.), 19,789. Settled in 1725, Leominster was part of Lancaster until incorporated as a separate town in 1740. In 1873 it suffered severely from fire. Consult Emerson, *Leominster, Massachusetts* (Gardner, Mass., 1888).

LEÓN, or **LEÓN DE LOS ALDAMAS**, lā-ōn' dā lōs āl-dā'más. A city of Mexico, in the State of Guanajuato, 32 miles west of Guanajuato (Map: Mexico, H 7). It is a well-built town, situated in a rich agricultural district, and has a fine public square, a cathedral, convents and schools, and one of the largest and finest theatres in the country. León is a flourishing industrial centre and has an extensive commerce in wheat and other grains and manufactures leather saddlery, cottons, and woollens. Pop., 1900, 63,263; 1910, 57,722. The town was founded in 1576 and became a city in 1836.

LEÓN. A city of Nicaragua, finely situated

in a picturesque district, 13 miles from the Pacific coast and 45 miles northwest of Managua (Map: Central America, D 4). It has a cathedral, an episcopal palace, and a university. León was founded by Francisco Hernández in 1523, on the shore of Lake Managua, opposite Mount Momotombito, but was removed west in 1610 to its present site. It is connected by railway with the port of Corinto and has an active trade in produce of the region and imported articles. It was formerly the capital of the Republic and is still the largest city. Pop. (est.), 60,000, including the Indian suburb of Subtiaba.

LEÓN. A former kingdom in the northwestern part of Spain, embracing the modern provinces of Salamanca, Zamora, León, Valladolid, and Palencia, and bounded on the north by Asturias, on the east by Old Castile, on the south by Estremadura, and on the west by Portugal and Galicia. Its area is about 21,038 square miles. The river Duero crosses the region from east to west, among its affluents being the Esla on the right and the Tormes on the left. From the central valley the land rises in broad and level terraced plateaus towards the rugged granite mountains of the Sierra de Francia and the Sierra de Gata on the southern boundary; and a more uneven region, cut by narrow valleys, rises towards the lofty Cantabrian chain on the northern boundary. The climate is extremely varied, almost subtropical in the valley of the Duero, changing to a severe continental climate with not unusual snows on the southern highland and a more humid and unstable one towards the north. The vegetation varies as much as the climate; oranges, lemons, olives, and vines thrive in the central valley, while the slopes yield abundant crops of wheat and other cereals and a fine quality of flax. The whole region, with the exception of a sterile plateau in the northeast, is well watered, and the highlands are clothed with extensive forests, in which the oak, walnut, and chestnut are predominant. The mineral wealth is not very large except in the northwest, where considerable quantities of coal and iron and some copper are mined. The industries are unimportant, though there are some flour and textile mills and ironworks. Trade is more active, and the exports include coal, iron, building stone, timber, cork, hides and cattle, linen and woolen goods, olives, and wines. The inhabitants are of pure Spanish descent, proud, indolent, and ignorant, as well as hospitable and brave. Pop., 1887, 1,420,525; 1900, 1,453,527; 1910, 1,478,000.

History. León first appears in history as an independent kingdom about 910, when the Kingdom of Asturias (q.v.) was divided among the three sons of Alfonso III, García receiving León. It suffered in the following years to a great extent from the Arabs, for the various rulers were weak, and rebellions were frequent. The first signs of vigor appeared under Alfonso V (999-1027), who is known in Spanish history as the Restorer of León. In 1037 the male line of the house of León became extinct, and Ferdinand I, King of Castile, succeeded. His son, Alfonso VI the Valiant, wrested large territories from the Mohammedans. Until 1157 the history of León is a part of that of Castile (q.v.). In 1157 Alfonso VII of León and II of Castile (called by Mas La Trie Alfonso VIII because he counted Alfonso I of Aragón, husband of Urraca of León and Castile, as Alfonso VII), known as the Emperor, died, and León became

again an independent kingdom under his son Ferdinand. The latter's son was Alfonso VIII of León, who is usually known as Alfonso IX because his cousin Alfonso III of Castile is called Alfonso VIII in the total reckoning of the Alfonsos of León and Castile (a method of enumeration which has been adopted by the last two sovereigns and declines to follow Mas La Trie in including Alfonso I of Aragón in the sequence). Alfonso IX married his cousin Berengaria of Castile in 1197 without papal license, so that Innocent III placed the whole country under an interdict. For seven years the couple remained firm, but finally separated, and a long series of wars between León and Castile began. In 1214 Berengaria became Queen of Castile in her own right, but immediately abdicated in favor of the eldest son of her union with Alfonso of León, Ferdinand. In 1230 he also succeeded to the throne of León, ruling the two countries as Ferdinand III. León and Castile were never again separated. Alfonso X mounted the throne in 1252, and there has been no further dispute about the enumeration.

LEÓN. The capital of the ancient kingdom and modern Spanish province of the same name, situated near the confluence of the rivers Bernesga and Torio, in a beautiful wooded plain 81 miles northwest of Valladolid and on the railroad from the latter place to Gijón (Map: Spain, C 1). It is also an episcopal see. Part of the old Roman wall, 20 feet thick, is still standing, and outside of this is another wall built in the fourteenth century. The streets are crooked and narrow; but there are a number of interesting old buildings. The cathedral is a masterpiece of Gothic art. It was begun in the thirteenth century and finished at the close of the fourteenth, but, owing to a defect in its construction which threatened its ruin, an extensive restoration was begun in 1843. Those entrusted with the work showed such bad taste and such poor science that in 1869 it was necessary to begin a second restoration, which was carefully and systematically carried out for nearly 40 years. The interior is rich in sculptures and mural paintings and contains the tomb of King Ordoño II of León. The two other architectural monuments of León are the church of St. Isidore, in the Byzantine style of the twelfth century, containing the tombs of most of the kings of León, and the convent of San Marcos, also dating from the twelfth century, but rebuilt in 1514. The latter has a beautiful and richly sculptured façade and is the principal seat of the Order of Santiago in León; a part of it is now occupied by the municipal archaeological museum. Besides this museum, León has a number of educational institutions, such as the provincial library, the institute for secondary education, a normal school, and a veterinary school. The industry and trade of the city are unimportant. Pop., 1887, 13,446; 1900, 17,022; 1910, 18,117.

León was founded by the Romans as a military garrison and called *Legio Septima Gemina*, the word *legio* being later confused with *león*. It was twice captured and held by the Arabs in the ninth century, but recaptured, first by Alfonso I and the second time by Ordoño I. In the beginning of the tenth century Ordoño II made it the capital of the Kingdom of León. Even after that it was continually threatened, and once almost destroyed by the Arabs. In 1808 it was sacked by the French.

LEÓN, le'on. A city and the county seat of

Decatur Co., Iowa, 87 miles by rail south of Des Moines, on the Chicago, Burlington, and Quincy Railroad (Map: Iowa, D 4). It has considerable trade as the centre of a fertile agricultural, dairying, and stock-raising district, and has one of the largest poultry plants in the country. The water works are owned by the city. There is a Carnegie library and a fine courthouse here. Pop., 1900, 1905; 1910, 1991.

LEÓN, lá-on'. A town of Panay, Philippines, in the Province of Iloilo, situated about 14 miles northwest of Iloilo. Pop., 1903, 10,277.

LEÓN, ANTONIO (1794-1847). A Mexican soldier, born in Huajuapán. He was at first a Royalist, but afterward joined the insurgent forces and did valuable service for their leader Iturbide, who made him lieutenant colonel as a reward for his capture of Tehuantepec in 1821. But when Iturbide took part in the plan of Iguala and proclaimed the plan of Iguala, León supported General Bravo and the Republican opposition. Afterward he served in the Constituent Congress of 1824 as deputy from Oajaca. He took an active part in suppressing the numerous insurrections that followed the proclamation of the Republic, becoming brigadier general in 1843, at which time his fame among his countrymen was so great that the name of his natal village was changed to Villa de Huajuapán de León. Later he fought in the war with the United States at Padierna and Molino del Rey, where he was killed.

LEÓN, FRAY LUIS DE (?1528-91). A Spanish poet and mystic, born at Belmonte in Cuenca. He is the greatest of all the Spanish mystics, and one of the greatest of Spain's lyrical poets. He early entered the Augustinian Order, was trained at the University of Salamanca, and was there elected to the chairs of Thomistic philosophy and of theology. His abilities as a theologian and as a linguist soon gained him great repute. In 1572, however, he was accused of having impugned the validity of the Vulgate and of having violated the ecclesiastical law which forbade the publication of unauthorized translations of the Bible. It seems that he had rendered the Song of Songs (Song of Solomon) into Spanish for the benefit of a certain nun, but the publication had been brought about by an enemy without León's knowledge or consent. He was detained in prison at Valladolid until 1576, when he was discharged. He employed the period of his imprisonment in writing. When released, he was reinstated with honor in his post at Salamanca. He continued at Salamanca for some time, became vicar-general of his order, and finally (10 days before his death) provincial of the Augustinians of Castile. Besides works in Latin, León produced much in Spanish prose and verse. Of his works in prose the most important are the *Nombres de Cristo*, discussing the various appellations given to the Saviour in the Scriptures; the *Exposición del libro de Job*; a Spanish translation of his Latin commentary on the Song of Solomon; and a treatise on wifely duties, the *Perfecta casada*. In all these he displays the humanistic bent of one well acquainted with the Greeks and Latins. His poetry has an undying charm. Besides his original lyrics, his verse includes translations of classics (e.g., from Horace, Vergil, Tibullus, Pindar, Euripides, Seneca), modern works (*cantoni* of Bembo and Giovanni della Casa and imitations of Petrarch), and translations from

sacred sources (the Psalms, Job, Proverbs, the *Pange Lingua*, the Song of Solomon).

Bibliography. *Obras*, published in six volumes (Madrid, 1804-16, by Merino); the reprint by C. Muñoz Saez, Madrid, 1885, is careless; J. Gonzáles de Tejada, *Vida de Fray Luis de León* (Madrid, 1863); C. A. Wilkens, *Fray Luis de León* (Halle, 1866); *Colección de documentos inéditos para la historia de España*, vols. x-xi, F. H. Reusch, *Luis de León und die spanische Inquisition* (Bonn, 1873); M. Gutiérrez, *Fray Luis de León y la filosofía española* (Madrid, 1885); M. Menéndez y Pelayo, *Estudios de crítica literaria, Primera Serie* (ib., 1893); J. D. M. Ford, *Luis de León, the Spanish Poet, Humanist, and Mystic* (in the publications of the Modern Language Association of America, vol. xiv, No. 2). Henry Phillips (Philadelphia, 1883), Bryant, and others have made English verse renderings of some of León's lyrics. A very careful edition of the *Perfecta casada* (ed. by Miss Elizabeth Wallace) appeared at Chicago in 1903.

LEÓN, ISLA DE (known also as the ISLA GADITANA). A long, narrow island on the southwest coast of Spain, containing the cities of Cadiz and San Fernando (Map: Spain, B 4). It is 10 miles long and two broad and is separated from the mainland by the narrow deep channel of San Pedro, spanned by two bridges, one carrying a railroad. The surface of the island is flat and covered with sand dunes and salt marshes. Pop., 1910, 60,873.

LEÓN, lá-ón', MARIE JEAN. See HERVEY DE SAINT-DENYS, M. J. L., MARQUIS D'.

LEÓN, PEDRO DE CIEZA DE. See CIEZA DE LEÓN, PEDRO DE.

LEÓN, PONCE DE. See PONCE DE LEÓN.

LEONAI, or LEONNOYS See LYONNESSE.

LEONARD, lén'erd, DANIEL (1740-1829). An American jurist, born at Norton, Mass. He graduated at Harvard in 1760, studied law, was elected to the General Court, and was at first a stanch Whig. Becoming alarmed, however, at the lengths to which the Whigs seemed to be going, he became a Loyalist. In 1774-75 he published in a Boston newspaper a series of 17 papers over the signature *Massachusettsensis*, to which John Adams replied over the signature *Novanglus*. The papers dealt chiefly with the legal aspects of the rights of the British Parliament over the colonists and have been pronounced to be perhaps the clearest and strongest statement of the British position made anywhere in the Colonies. Though the authorship was not fixed upon him, a mob fired into his house at Taunton, and he was forced to remove his family to Boston in 1776. On the British evacuation in 1779 he accompanied the army to Halifax and went from there to London. His name was in the list of those sentenced to banishment by Massachusetts in 1778 and to confiscation of their property in 1779. For many years he served as Chief Justice of the Supreme Court of Bermuda, but died in London. Mr. Adams republished the controversy *Novanglus and Massachusettsensis* (Boston, 1819), but even at that date thought that the letters were written by Jonathan Sewall.

LEONARD, H. WARD (1861-1915). An American inventor and electrical engineer, born at Cincinnati, Ohio. He graduated from Massachusetts Institute of Technology in 1883 and became associated with Thomas A. Edison in the

following year. In 1887 he was appointed general superintendent of the Western Electric Light Company at Chicago and in the following year organized the firm of Leonard and Izard, which sold out to the Edison interests in 1889. Leonard then became general manager of the Edison interests in the United States and Canada. During his lifetime he patented more than 100 inventions. In 1891 he introduced his system of motor control and in 1892 completed a multiple voltage system, the efficiency of which was demonstrated on the U. S. S. *Brooklyn* during the Spanish-American War. A double-arm circuit breaker and a system of lighting trains and automobiles were also among his more important inventions. He received gold medals at the Paris (1900) and St. Louis (1904) expositions and the John Scott legacy medal of the Franklin Institute (1903).

LÉONARD, lá-ó-närt, HUBERT (1819-1890). A famous Belgian violinist, born at Bellaire, near Liège. After thorough preparation by a private teacher, Rouma, he entered the Paris Conservatory in 1836, where he was for three years a pupil of Habeneck. In 1844 he began his extended concert tours, which quickly established his reputation as one of the greatest of virtuosos. From 1848 to 1867 he held the position of principal professor of violin playing at the Conservatory of Brussels, having succeeded the celebrated De Bériot (q.v.). Owing to ill health, he resigned this post and settled in Paris, where he devoted the greater part of his time to private teaching. His compositions, which are almost exclusively for violin, make great demands upon the technical skill of the performer, but are lacking in depth of expression. Of permanent value are his instructive works, notably his *Ecole Léonard*.

LEONARDO ARETINO, lá-ó-när'dó á'rä-té'nó See AREZZO.

LEONARDO DA VINCI, lá-ó-när'dó dá vén'ché See VINCI, LEONARDO DA.

LEONARDO OF PISA. See FIBONACCI.

LEONA VICARIO, lá-ó-ná vé-kä'ryó. See SALTILLO.

LEONCAVALLO, lá-ón-ká-väl'ló, RUGGIERO (1858-). An Italian composer, born in Naples and educated at the conservatory of music in that city. Together with Mascagni (q.v.) he labored zealously for the advancement of the newer Italian music, and although educated under such conservative Italian teachers as Peri, Simonetti, and Ruta, he, more than any other Italian dramatic composer of his day, gave evidence of German influence. He was an enthusiastic admirer of Wagner and under his encouragement began the trilogy *Crepusculum*, an historic play of the Italian Renaissance, the preparation for which occupied him six years. Only the first part of this, *I Medici*, was completed. The failure attending its first performance in 1893 discouraged him from writing the music for the other two portions, *Savonarola* and *Cesare Borgia*. Perhaps a second reason for abandoning his trilogy is to be found in the overwhelming success of his *Pagliacci* (1892), which showed him in what field his real strength lay. In 1896 he brought out *Chatterton*, his earliest opera (written in 1878), but it proved a failure. *La Bohème* (1897) had some success, but had the misfortune of being produced a few months after the triumph of Puccini's opera treating the same subject. *Zaza* (1900) met with considerable favor. *Der Roland von Berlin*

Geschichte nebst Quellenkunde (5th ed., Munich, 1914).

LEONIDAS II (c.285–236 B.C.). King of Sparta. He was a son of Cleonymus and served abroad under the kings of Syria and Egypt. He brought back to Sparta an Eastern wife and Eastern ideas and was dethroned by the ephors (241) because of his opposition to the reforms of King Agis IV. (See Agis, 4.) He came back to power in 240 after a brief exile at Tegea, put King Agis to death, and ruled alone for four years in a tyrannical and despotic manner. He was succeeded by his son, Cleomenes II.

LEONIDAS OF ALEXANDRIA. A Greek poet under Nero and Vespasian. In the Greek anthology 43 epigrams of very little merit are ascribed to him.

LEONINE CITY (It. *Città Leonina*). A part of Rome on the right bank of the Tiber, embracing the Vatican, the castle of Sant' Angelo, and the poor quarter called the Borgo. It was inclosed by Leo IV with high walls as a defense against the Saracens and became a refuge for the popes in later times. It was destroyed after the fall of Rienzi, but was restored during the next century. It now forms the fourteenth ward of modern Rome.

LEONINE VERSES. The name given to the hexameter and pentameter verses, common in the Middle Ages, which rhymed at the middle and end. They are said to have been so named after a canon of the church of St Victor in Paris, about the middle of the twelfth century, or, according to others, after Pope Leo II, who was a lover and improver of music. But leonine verse can be ascribed to no single man as the inventor. It is rather one of the incidentals in the passage from the quantitative verse of the ancients to the accented verse of modern literature and still more from nonrhyming to rhyming verse. Indeed, traces of leonine verse appear even in the Roman poets themselves, especially in Ovid's *Epistles*. In the Middle Ages it was widely employed in Latin hymns and secular poetry, in epitaphs and epigrams. An analogous effect is produced in English poetry by the use of rhyme in the middle of the line. It was employed with effect by Tennyson in "The Bugle Song"—

"The splendour falls on castle walls,"

and earlier by Shelley in "The Cloud"—

"That orb'd maiden with white fire laden"

It is perhaps oftener used by Kipling than by any other English poet.

LEONNATUS (Lat., from Gk. Λεοννάτος) (?–322 B.C.) A Macedonian commander. He was one of the generals who avenged the death of Philip upon his assassin Pausanias (Diodorus, xvi, 94). He accompanied Alexander the Great in his invasion of Persia in 334 B.C., and it was through his personal bravery that Alexander's life was saved during the attack on the city of the Malli. At the death of his chief he obtained the satrapy of Phrygia Minor, but was killed in the battle near Lamia while aiding Antipater against the revolted Greeks. See LAMIAN WAR.

LEÓN PINELO, lá-ón pé-ná'lô, ANTONIO DE. A Spanish author of the seventeenth century. He was born at Córdoba, Peru (now Argentina), in the last quarter of the sixteenth century, and died in 1660. He studied law in Lima, but spent the greater part of his life in Spain, where he

was prominently connected with the administration of Spanish colonies as member of the Supreme Council of the Indies up to 1653. At that date he became judge of the Contratación in Cadiz. Before leaving South America he had examined with great care all the archives of Peru and Mexico, and during the whole of his long residence in Spain he was indefatigable in his studies in the archives of Madrid, Simancas, etc.—the sources of his vast knowledge concerning the history and bibliography of the Americas. His more important works were *Epítome de la biblioteca oriental y occidental, náutica y geográfica* (Madrid, 1629, rev. by De Barcia, 1737–38), which is the earliest bibliography of the sciences, mines, and the great colonial code, *Tratado de las leyes de Indias* (4 vols., published after his death, ib., 1680). For a further list of his works, the reader should consult Nicolás Antonio, *Bibliotheca Hispana Nova*, vol. i (ib., 1684).

LEON'TES. The King of Sicily in Shakespeare's *Winter's Tale*. See PERDITA.

LE'ONTI'NI. The ancient name of Lentini (q.v.), a city in Sicily.

LEON'TIUM. See HERMESIANAX.

LEONTIUS (lê-ôn'shi-ûs) **OF BYZANTIUM**, bi-zân'shi-ûm (c.485–c.543). An ecclesiastic of very uncertain date. Many works of about the same date bear the name Leontius, with the epithets *Byzantinus*, *Cyprius*, *Hierosolymitanus*, *Presbyter et Abbas Sancti Sabae*, and *Neapolitanus*. It is possible that these epithets, with the exception of *Neapolitanus* and *Cyprius* (which refer to a bishop of Naples and Cyprus, of the seventh century, author of a life of St. Simeon), were used by a monk born at Byzantium and a teacher there, and afterward a priest at the abbey of St. Sabas near Jerusalem. There is further confusion possibly with a Scythian monk of the same name, if not, we must suppose that the Byzantine monk lived in Scythia, was originally a Nestorian—although he afterward attacked this sect—and that he came to Rome and Constantinople about 519 with Scythian monks who took part in the theopaschitic controversy. Leontius is supposed to have introduced Aristotelian definitions into theology. He wrote *De Sectis*, or *Scholias* in ten sections (ᾠδαίς), of which a later recension is published in Galland's *Bibliotheca Patrum*, vol. xii (1778), a valuable history of heresy, and *Contra Eutychianos et Nestorianos et Adversus Argumenta Severi*. Consult Loofs, *Leben von Leontios* (1887).

LEONZIO PILATO, lá-ôn'tsá-ô pé-lá'tô, or LEO PILATUS (?–c.1366). A Calabrian scholar, famous as one of the early introducers of Greek studies into Italy. Discovered by Boccaccio in Venice, he came as Boccaccio's guest to Florence in 1360 and was employed by the Republic as a teacher of Greek. He made for Boccaccio the first modern translation of Homer into Latin and was the first to lecture in public upon the great poet in western Europe. Returning to Venice, he met Petrarch, then a pupil of Barlaam. From Venice he went to Constantinople, intending to return to Italy, but he was struck by illness on the voyage across the Adriatic (c.1366). He assisted Boccaccio with the materials for much of the latter's erudition, and it was Boccaccio's excess of confidence in Leonzio—more or less a charlatan and not skilled in classic Greek—that led the humanist to introduce many errors into his work. Consult Georg

Voigt, *Die Wiederbelebung des klassischen Altertums*, vol. ii (3d ed., Berlin, 1893).

LEOPARD, lēp'ard (OF. *leopard*, Fr. *léopard*, from Lat. *leopardus*, from Gk. λεοπαρδος, λεοντοπαρδος, *leontopardos*, leopard, from λέων, *leōn*, lion + παρδος, *pardos*, pard). The leopard (*Felis pardus*) ranks third in size among the Old World cats, but has the widest distribution of all. In all its history the name leopard has been confused with the words pard and panther, and even at the present day it is a common belief that a pard is a panther and that the latter is a different animal from the leopard. Among sportsmen it has been customary to use the term "panther" for all unusually large leopards. As a matter of fact the leopard was called pard or panther by the ancients, and the word leopard was probably originally applied to the cheeta (q.v.), but was incorrectly transferred to the panther and has now almost wholly superseded that name.

Although exceeded in dimensions by the lion and tiger, the leopard ranks with them in grace, quickness, and ferocity. It is the most variable in color and size of all the large cats, a fact no doubt due to its extensive range, for the leopard is found throughout the continent of Africa, and from Palestine to northern China and Japan, and in Borneo, though it is not found north of the Himalayas. Mivart gives the average length of the body and head as about 3 feet, 10 inches, and of the tail as 3 feet, 8 inches. The pupil is round. The color of the leopard is buff of some shade, sometimes tawny, sometimes rufous, passing into white on the under parts and on the inner sides of the limbs; everywhere are spots, comparatively small, roundish, and very black on the under parts, but brown and collected into rings and rosettes on the back and sides. These differ from the spottings of the jaguar (q.v.) in being less definitely arranged and in not falling into rings inclosing one or more spots. But the distinctness of the markings varies greatly, and they are less evident in cubs than in the adults. The tail is ringed. The so-called black leopard is a not uncommon melanistic variety in which the ground color has become so nearly black that the markings can be detected only with difficulty. Black leopards are found most commonly in southern Asia. They are occasionally bred in captivity, frequently born in the same litter with spotted ones; and they seem invariably to manifest a far more savage and irreconcilable disposition than even the normal variety. A Malaysian variety is black with fulvous spots—a reversal of the normal coloration. Great variability exists in the length of the coat; and some naturalists regard the snow leopard of the high Himalayas as merely a variety, while a maned form is said to exist in Central Africa.

The haunts of the leopard are usually in wooded districts, but, although it climbs trees easily, it prefers the ground or the large limbs of low trees, whence it can spring easily on its prey. Both haunt and habits vary greatly according to the region in which the animal lives and the sort of prey upon which it depends. The leopard of the East Indian or West African jungles is different in many ways from that of the rocky but comparatively open districts of South Africa or Somaliland, or the high plains of Persia. Everywhere it sustains its reputation for a quickness, ferocity, cunning, and destructiveness greater than those of either lion or

tiger; yet its strength is by no means equal to theirs. Individuals, however, exhibit contrasting temperaments, as in other species.

Leopards feed chiefly upon mammals, as antelopes, deer, monkeys, goats, and dogs, and of the last named, like other great cats, they are especially fond. There is no other enemy so feared by monkeys, and none to which they so often fall a prey. Leopards also capture large ground birds, such as peafowl; persistently raid herds of cattle and goats; and occasionally attack human beings, chiefly women and children. Rarely an old leopard becomes a true man-eater, but once having discovered how easily it can secure human victims, is more dangerous than a man-eating tiger or lion, for it is far more stealthy, cunning, and persistent. Hunters find the pursuit of the leopard not only as exciting, but often as dangerous, as that of the tiger, and the methods pursued are in India substantially the same. See **TIGER HUNTING**; **HUNTING BIG GAME**, **CHEETA**.

The leopard is usually regarded as among the most intractable of animals, yet a few have always been among the tamed and performing troupes of the animal trainers; but as they grow old they are far less trustworthy than any other of the big cats. The leopard makes its home in a cave or dense thicket or huge hollow stump; and there the female annually bears three or four young. They thrive and breed well in captivity. Their hides are in constant demand in the fur market and command a high price. Throughout the whole of Central Africa the skin of the leopard is deemed a suitable ornament for persons of princely rank, and nowhere is it more readily admitted among the insignia of royalty than with the Niam Niam (q.v.). Roosevelt admits four races of the leopard or *Felis pardus*, viz., *suahelica*, *ruwenzori*, *chui*, and *fortis*.

Fossil remains of the leopard have been found in Pleistocene deposits in various parts of Europe, and there is even some evidence of its former occurrence in Great Britain.

Bibliography. One of the best general accounts is "The Leopard and Panther," in J. H. Porter, *Wild Beasts* (New York, 1894); also see Richard Lydekker, *Game Animals of Africa* (London, 1908), and Roosevelt and Heller, *Life-Histories of African Game Animals* (New York, 1914); beyond that consult the authorities referred to under **LION** and **TIGER**. See **Plate of CATS**, **WILD**.

LEOPARD. In heraldry (q.v.), the lion represented passant gardant. On English shields, however, the lion passant gardant has sometimes been represented as a lion.

LEOPARD CAT. A rare and little known cat (*Felis bengalensis*) of northern India, the Malay Peninsula, Sumatra, and Java, which is about two-thirds the size of the leopard. Its coloration resembles that of the leopard, but there are four longitudinal spots or stripes on the forehead, continued backward in lines to the shoulders and thence traceable in broken lines along the back. All the other spots are rather large and show a tendency to fall into rows. The limits and affinities as well as the habits of this animal are little understood. Consult St. J. Mivart, *The Cat* (New York, 1892), and Richard Lydekker, *Game Animals of India, Burma, Malaya, and Tibet* (London, 1907).

LEOPARD CATFISH, or **SURAVI**. See **CATFISH**.

LEOPARD FROG (so called from the spotted coloration). The common spotted green frog of North America (*Rana virescens*)—the most widely distributed of all American frogs and found from Athabasca Lake to southern Guatemala, except on the coast of California. It is the shad frog of New England. See FROG, and Plate of AMERICAN FROGS AND TOADS in article TOAD.

LEOPARDI, la'ô-pär'dè, ALESSANDRO (?-c.1522). A Venetian decorative sculptor of the Renaissance. He was born in Venice and probably studied under Pietro Lombardo. Little is known of his life. His first important commission was the architecture and decoration of the mausoleum of the Doge Andrea Vendramin, in SS. Giovanni et Paolo in Venice. In 1487 he was exiled from the city for some unknown indiscretion, but three years afterward was recalled to complete the statue of Colleoni, left unfinished by Verrocchio. This magnificent figure was cast in bronze by Leopardi, who supplied the fine marble pedestal with its bronze frieze. From 1503 until 1505 he was employed with the Lombardi to erect the tomb of Cardinal Zeno in St Mark's. The beautiful bronze bases for the standards in the Piazza di San Marco (1500-05) are entirely his own work, and he is thought to have designed and cast three bronze reliefs representing the Assumption of the Virgin in the Museo . . . Venice, and also the bronze relief . . . "Fiery Chariot" in the Morgan collection, New York. Leopardi was one of the first sculptors of his time in Venice. His works reveal delicate feeling for decorative effects, dignity of composition, vigor of design, and purity of execution.

LEOPARDI, GIACOMO, COUNT (1798-1837). An Italian poet, born at Recanati, June 29, 1798, of an old noble family then impoverished but a staunch supporter of the papal rule. Leopardi's childhood was a sad one, as his mother's one preoccupation was the restoration of the family fortunes. From a very tender age he gave himself up with such energy to the study of the classics and of three or four modern languages, that he greatly impaired his health, delicate from early youth, and brought on those chronic ailments that embittered all his later life; but he had acquired a scholarship sufficient in itself to give him rank. In 1817 he began his correspondence with Pietro Giordani, which stimulated him to an appreciation of artistic values and afforded the lonely youth relief in self-expression; and to this same year belongs his first love affair, which inspired his first poems (*Il primo amore*, *Spento il diurno raggio*, and *Io qui vagando*). Unable, through illness, to study, and a prey to an overpowering melancholy, due in part to friction with his father, who disapproved his increasing liberalism, he made an unsuccessful attempt to escape from his father's house in 1819 and was thereafter closely guarded. In 1822, however, he obtained leave to go to Rome, and then began a period of constant wandering to and fro, during which, a victim of unceasing physical and moral torments, he found life to be a series of disenchantments. In the employ of the publisher Stella, for whom he supervised a monumental edition of Cicero, he sojourned in Rome, Milan, Bologna, Florence, Pisa, and at intervals in Recanati. He finally went to Naples, where he died, June 14, 1837. Scantiness of money hampered him always, and his bodily infirmities prevented him

from taking the independent position which might have been his when the statesman and scholar Bunsen offered him a university professorship in Germany. A deep student of Greek and Latin, and conversant also with French, Spanish, and English, Leopardi produced philological works notable for the time, but now, with the exception of the commentary on Petrarch, antiquated. There are two periods recognizable in Leopardi's lyric activity. In the first of these, which extends from about 1816 to 1824, and embraces some 22 compositions approved by the author, his pessimism is formulated, and he rests more particularly under the influence of the classics; in the second period, which, after a couple of years given up to writing in prose, begins in 1826 and occupies the rest of his life, he develops his pessimism caused by his physical sufferings which brought him spiritual ones, and, seeing the prevalence of cruelty in nature, ends by affirming the universality of suffering. His poetry springs from feeling struggling with reality or nature, the arch enemy, and reason, and flows into forms molded by his keen intellect, exquisite sense of harmony, and mastery of language. Besides the lyrics he wrote two satires on the ineptitude or insincerity of the reformers, pointing out that to bring about the desired *risorgimento* the regeneration of the Italian character was necessary. He felt too deeply, however, to be successful in this kind of writing. His fervent patriotism, which animates the odes to Dante and to Italy, was a powerful inspiration to the generation which followed him. As to metrical structure, Leopardi was most inclined to the use of blank verse (*versi sciolti*), which in his hands attained new beauty; but in some of his best pieces he employed even internal rhyme; in general, his rhyme schemes are of an intricate nature. Of his various prose works the author gave his final approval only to the *Operette morali*, an exposition and, in parts, a defense of his doctrine of pessimism, and a few of the *Volgarizzamenti*, translations from the Greek. There appeared posthumously the prose *Pensieri*, a commentary on the society he had encountered. His critical powers are best illustrated in his *Crestomazia italiana*, containing selected passages from the most representative Italian writers of every century. For a knowledge of the inner man, nothing is more important than the *Lettere*, a collection of his letters extending . . . 1812 to a few days before his death, familiar in their style and notably sincere in tone.

Bibliography. Editions of the poems: *All' Italia* and *Sul monumento di Dante* (Rome, 1819); that of the *Ad Angelo Mai* (Bologna, 1820); the *Canzoni del conte Giacomo Leopardi* (ib., 1824); the *Versi del conte Giacomo Leopardi* (ib., 1826); the commentary by A. Stracali (2d ed., ib., 1895). The most complete editions are those of G. Chiarini (Florence, 1886) and of G. Mestica (ib., 1886). The first edition of the *Epistolario* was that of Florence, 1849; consult the 5th ed. by G. Piergili (ib., 1892). The best editions of the *Operette morali* (first published at Milan, 1827) are those of G. Chiarini (Leghorn, 1870) and G. Mestica (Florence, 1890). Commentaries: N. Zingarelli (Naples, 1895); I. Della Giovanna (Florence, 1895). Biographical and critical treatises: G. I. Montanari, *Biografia del conte Giacomo Leopardi* (Rome, 1838); F. de Sanctio, *Saggi Ori-*

tioi (Naples, 1868); id., *Nuovi saggi critici* (ib., 1879); C. Rosa, *Della vita e delle opere di Giacomo Leopardi* (Ancona, 1880); A. Ranieri, *Sette anni di sodalizio con Giacomo Leopardi* (Naples, 1880); L. Cappolletti, *Bibliografia Leopardiana* (2d ed., Parma, 1882); C. A. Traversi, *Studi su Giacomo Leopardi* (Naples, 1887); C. A. Sainte-Beuve, *Portraits contemporains*, vol. iv (2d ed., Paris, 1891), I. Della Giovanna, *La ragion poetica dei canti di Giacomo Leopardi* (Verona, 1892); A. Graf, *Foscolo, Manzoni e Leopardi* (Turin, 1898); G. Carducci, *Degli spiriti e delle forme nella poesia di G. L.* (Bologna, 1898); G. A. Cesareo, *La Vita di Giacomo Leopardi* (Florence, 1905); N. Serban, *Leopardi Sentimental* (Paris, 1913).

LEOPARD (lêp'ard) **LIZARD**. See COILED LIZARD.

LEOPARD MOTH. A moth (*Zeuzera pyrina*), of European origin, famous for the damage which its larva does by boring into the limbs and branches of forest and shade trees. It has been accidentally introduced into the United States, and has been established in the vicinity of New York City. It belongs to the family Cossidae, the larvæ of all of which are wood borers. The female has a wing expanse of two inches and is white in color spotted with black. The eggs are laid in groups attached to the bark, and the larvæ bore into the branches, either killing them or weakening them so that they readily break in a high wind.

LEOPARD SEAL. The Pacific coast variety of the common or harbor seal (*Phoca vitulina*), which is more often spotted than is that of the Atlantic. Consult Scammon, *Marine Mammals of the Northwestern Coast of North America* (San Francisco, 1874). See SEAL.

LEOPARD (or CAT) **SHARK**. A small shark (*Triakis semifasciatus*) of southern California, gray, banded and spotted with black. It is a handsome fish, and may be quickly recognized by its variegation.

LEOPARD TREE. A tree which furnishes a useful gum. See FLINDERSIA.

LEO PILATUS. See LEONZIO PILATO.

LEOPOLD I (1640-1705). Holy Roman Emperor from 1658 to 1705. He was the second son of Ferdinand III (q.v.) and Maria Anna of Spain and was born in Vienna, June 9, 1640. He was educated for the Church, but on the death of his father in April, 1657, his elder brother having died in 1654, he succeeded as ruler of the hereditary Austrian dominions (including Bohemia) and as King of Hungary, a large part of which country was still in the hands of the Turks. He was elected Emperor July 18, 1658, and crowned at Frankfort August 1 in spite of the strong objections of Mazarin. The internal affairs of his reign are unimportant. In external relations it was a troubled half century for Austria. The chronic struggle with the Turks was renewed in 1660, and Hungary and even Austria were seriously imperiled, but Montecuculi signally defeated the enemy at St. Gotthard on the Raab, Aug. 1, 1664. Leopold thereupon hastened to make a 20 years' truce with the Sultan. The persecution of the Protestants in Hungary, inspired by Leopold's intolerant zeal, and his utter disregard of the Hungarian liberties, led in 1678 to a formidable revolt in that kingdom under Count Tökölyi (q.v.). The Hungarians were supported by the Sultan, and in 1683 a vast Turkish army, under the Grand Vizier, Kara Mustapha, advanced to

Vienna, which was besieged from July 14 to September 12 and was saved only by the timely assistance of John Sobieski (q.v.), the warrior King of Poland, who, seconded by Charles of Lorraine and the electors of Saxony and Bavaria, completely routed the besieging forces and drove them beyond the Raab. This signal service of the Polish King Leopold repaid with ingratitude. In 1686 Buda was recovered from the Turks. Hungary was now mercilessly punished, and a Diet in 1687 was compelled to register the will of Leopold, making the crown hereditary in the house of Hapsburg. The expulsion of the Turks from Hungary and Transylvania was completed (1690-99) by the brilliant campaigns of Prince Eugene, and in the Treaty of Carlowitz the Turks were forced to give up Hungary between the Danube and Theiss and to allow Leopold to take Transylvania. Leopold, however, did not succeed in attaining full possession of Hungary, which obstinately resisted his drastic policy, and the task went over to his successor, Joseph I (q.v.). The natural rivalry between the house of Hapsburg and that of France involved Leopold in the European wars against Louis XIV from 1672 onward, and at his death he handed this struggle over as a legacy to his son. He joined the League of Augsburg against France in 1686 and the Grand Alliance in 1689, his allies being Sweden, Spain, Holland, Savoy, Bavaria, Saxony, and the Palatinate. The imperial armies were brilliantly led by Prince Eugene. The Peace of Ryswick, in 1697, brought to a close one period of this great struggle, but the year 1701 witnessed the outbreak of the War of the Spanish Succession, which was still in progress when Leopold died in Vienna, May 5, 1705. Consult: R. Baumstark, *Kaiser Leopold I.* (Freiburg im Breisgau, 1873); Franz Scheichl, *Leopold I. und die österreichische Politik während des Devolutionskrieges* (Leipzig, 1888); A. F. Pribram, *Zur Wahl Leopolds I.* (Vienna, 1888). See AUSTRIA-HUNGARY.

LEOPOLD II (1747-92). Holy Roman Emperor from 1790 to 1792. He was the third son of Emperor Francis I and Maria Theresa of Austria, and was born in Vienna, May 5, 1747. In 1765, on the death of his father, he became Grand Duke of Tuscany, and ruled as one of the numerous class of despotic but enlightened rulers of the eighteenth century. He abolished the Inquisition, abrogated the death penalty, equalized the land tax, favored free trade, and founded schools and almshouses. He maintained neither an army nor a navy, so that he might spend more on state improvements. In 1790, on the death of his brother, Joseph II, who left no children, he became Emperor and ruler of the Austrian dominions. He found the affairs of his hereditary states in the utmost confusion, owing to the drastic reform policy of Joseph II (q.v.). As King of Hungary he bound himself to act strictly in accordance with constitutional law. He restored order in Belgium, which had risen in insurrection under his predecessor. In 1791 peace was concluded with Turkey at Sistova. Leopold's attitude to the French Revolution in its early phases was marked by extreme moderation in spite of the efforts of the émigrés within the Empire to bring on war with France. After the attempted flight of the royal family from France, however, he entered into an agreement with the King of Prussia at Pillnitz (August, 1791), guaranteeing the integrity of their respective states, and expressing their

determination, in connection with the other Powers, to reestablish order in France, but forbidding at the same time any preparation for armed invasion of France on the part of the émigrés. Only when the war party in the French National Assembly had attained the upper hand did Leopold give up all hope of preserving peace with France. On Feb. 7, 1792, he concluded an alliance with the King of Prussia, but died March 1, 1792, before the actual declaration of war by France. His wife was Maria Louisa, daughter of Charles III of Spain. His eldest son, Francis, was the last of the Holy Roman Emperors. Consult: Adam Wolf, *Leopold II. und Maria Christina* (Vienna, 1867); H. A. L. von Sybel, *Kaiser Leopold II.* (Munich, 1869); Adolf Beer, *Joseph II. und Kaunitz* (Vienna, 1873); Adalbert Schultz, *Kaiser Leopold II. und die französische Revolution* (Leipzig, 1899).

LEOPOLD I, PRINCE OF ANHALT-DESSAU. See ANHALT-DESSAU.

LEOPOLD I, GEORGE CHRISTIAN FREDERICK (1790-1865). King of the Belgians from 1831 to 1865. He was the fourth son of Francis, Duke of Saxe-Coburg-Saalfeld, and was born Dec. 16, 1790. He received an excellent literary and scientific education and had the reputation of being one of the most cultured princes in Europe. He became a cavalry general in the Russian army in 1805 and enjoyed high favor with the Emperor Alexander I. He was present at the battles of Lützen, Bautzen, and Leipzig and took part in the invasion of France in 1814. He visited England after the Peace of 1815, and in the following year was betrothed to the Princess Charlotte, the heiress of the throne. He was naturalized by act of Parliament and received an annual pension of £50,000 and the title of Duke of Kendal. The marriage took place on May 2, 1816, but the Princess died in childbirth Nov. 5, 1817, and the child did not survive. Prince Leopold now lived in complete retirement in London and at his seat of Claremont. He received in February, 1830, the offer of the crown of Greece, and at first favorably entertained the proposal, but afterward rejected it, finding that it would not be granted to him by the Powers under conditions just or satisfactory to the Greeks. On June 4, 1831, he was elected by a national congress King of the Belgians, the people having risen against the rule of Holland, and on July 21 of that year his coronation took place at Brussels. In 1832 he married Princess Louise, daughter of Louis Philippe, King of the French, who died in 1850. As a monarch, Leopold conducted himself with great prudence, firmness, and moderation, and with constant regard to the principles of the Belgian constitution. He died Dec. 10, 1865, and was succeeded by his son, Leopold II. His daughter, Carlotta, was the wife of Maximilian, Emperor of Mexico. Consult Théodore Juste, *Les fondateurs de la monarchie belge, Léopold Ier, roi des Belges* (3 vols., Brussels, 1868), trans. into English as *Memoirs of Leopold I* (London, 1868), and Saint-René Taillandier, *Le roi Léopold et la reine Victoria* (Paris, 1878).

LEOPOLD II (1835-1909), LOUIS PHILIPPE MARIE VICTOR. King of the Belgians from 1865 to 1909. He was born April 9, 1835, the eldest son of King Leopold I. He married, in 1853, Marie Henriette, a daughter of the Archduke Joseph of Austria, and ascended the throne on the death of his father. He organized (1876) at Brussels

the African International Association (q.v.), with a view to making use of the recent discoveries in Africa. He promoted this work with energy, furnishing the means, largely from his own resources, for Stanley's exploration of the Congo. The Congo Free State (q.v.) was established and neutralized and the sovereignty of it was given to Leopold by the Berlin Conference (1885). (See BELGIUM.) His only son, Prince Leopold, died in 1869. His eldest daughter, Louise, born in 1858, was married to Prince Philippe of Saxe-Coburg, and the second daughter, Stéphanie, born in 1864, became the wife of the Crown Prince Rudolph of Austria-Hungary, who died in 1889. In 1900 she married Count Lonyay. Queen Marie Henriette died in 1902. In 1905-06 King Leopold was subjected to bitter foreign criticism in connection with the iniquitous practices pursued in the Congo Free State. This was followed by the complete annexation of the state to Belgium in 1908. See CONGO, BELGIAN. Leopold II was known as a person of immoral character, yet he was very popular because he was an able ruler and clever business man. He was succeeded by his nephew, Albert (q.v.). Consult J. de C. MacDonnell, *King Leopold II* (London, 1905), and A. S. Rappoport, *Leopold, King of the Belgians* (New York, 1910).

LEOPOLD II (1797-1870). Grand Duke of Tuscany, a son of the Grand Duke Ferdinand III, with whom he returned from exile in 1815 and whom he succeeded in 1824. His rule was efficient and mild, and he met the revolutionary movements of 1848 by granting a constitution, although he was checked from granting further administrative reforms by the overshadowing influence of Austria. He lent at first a half-hearted aid to Charles Albert of Sardinia in the war against Austria, but, unable to cope with the situation, he fled from his dominions in February, 1849, and withdrew to Naples. He returned in a few months and resumed his sway, which soon became despotic and was upheld by Austrian troops. In 1859 he refused to enter an alliance with Sardinia, and this led to his overthrow. He fled to Vienna, abdicating in favor of his son, but Tuscany, by a plebiscite, was incorporated into the Kingdom of Italy. He died an exile in Bohemia, Jan. 29, 1870. Consult M. Bartolommei-Gioli, *Il rivolgimento Toscano e l'azione popolare* (Florence, 1905).

LEOPOLD, GEORGE DUNCAN ALBERT, DUKE OF ALBANY (1853-84). The youngest son of Queen Victoria, born in Buckingham Palace. He was educated by private tutors and at Oxford and traveled extensively. In 1878 he began to take part, so far as his delicate health and the formalities of his station would permit, in social, educational, and literary affairs. He manifested a decided taste for intellectual pursuits. In 1881 he was created Duke of Albany, Earl of Clarence, and Baron Arklow, and the following year he married Princess Helena of Waldeck-Pyrmont. He died in the south of France, where he had gone for his health.

LEOPOLD, LAÛ-PÖLD, KARL GUSTAF AF (1756-1829). The Swedish Gottsched (q.v.), bulwark of French Classicism against the attacks of the Romantic Phosphorists. He attempted all forms of poetry save the epic and approached nearest to distinction in his tragedies *Odin* (1790) and *Virginia* (1802). Of his *Samlade Skrifter* he published three volumes (2d ed., 1800-02); three last volumes, edited by L. M. Enberg, were published in 1831-33.

LEOPOLD, KARL JOSEPH WILLIAM LOUIS (1821-1912). Prince Regent of Bavaria. He was born at Würzburg and married in 1844 the Archduchess Augusta of Tuscany. He fought in 1866 against Prussia, but was on the general staff of the Prussian army in the War of 1870-71. On the death of his nephew, Louis II of Bavaria, in 1886, Prince Leopold became Regent, owing to the insanity of Otto, the new King. In 1905 he established a military order in honor of the seventieth anniversary of his entrance into the army. He was succeeded in the regency by his son, Prince Louis Leopold, who in 1913 was crowned as Louis III (q.v.), after the dethronement of Otto.

LEOPOLD, LAKE. See RIKWA.

LEOPOLD, ORDER OF. 1. An Austrian order of civil and military merit, instituted in 1808 by the Emperor Francis I in memory of his father, Leopold II. It has three classes. The decoration is a cross of red enamel with white border, bearing in the centre the letters F. I. A. (Franciscus Imperator Austriæ), surrounded by the words *Integrati et Merito* (for uprightness and merit). On the reverse is the legend "*Opes regum corda subditorum*" (the riches of kings are the hearts of their subjects). The Emperor is grand master. 2. A Belgian civil and military order, founded by Leopold I in 1832, with five classes. The decoration is a white enameled cross with a wreath of oak and laurel, bearing the letters LL. and RR. (Leopoldus Rex). On the reverse are the Belgian arms and the device, "*L'union fait la force*" (in union is strength). See Plate of ORDERS.

LEOPOLD CHARLES FREDERICK (1790-1852). A Grand Duke of Baden, born in Karlsruhe, who succeeded his half brother, Louis, in 1830. He studied history at Heidelberg and later took part in the war with France. Interesting himself in the liberal ideas of his time, he granted concessions to his subjects in 1848 and in the spring of 1849 declined to oppose the movement which finally broke down all barriers and forced him to flee from the country on the night of May 13. In August he was reinstated by the troops of Prussia and the Confederation. He acted with the greatest forbearance after regaining his power. During the last years of his reign he admitted his son Frederick, who later succeeded him, to a share in the government.

LEOPOLD II, LAKE. A lake in the administrative district of the same name in the western part of Belgian Congo (Map: Congo, C 3). It is 105 miles long from north to south and its greatest width is 40 miles; its shores are very irregular. Its water is for the most part shallow, it is gradually diminishing in area, and it is drained by the Mfni, which flows from its southern end westward into the Kassai, through which it enters the lower Congo. The lake was discovered by Stanley in 1881.

LEOPOLDVILLE, lē'ō-pōld-vīl. An important station in the Belgian Congo, West Africa, situated on the left shore of Stanley Pool, in lat. 4° 20' S., 248 miles by rail from Matadi (Map: Congo, C 3). It is the eastern terminal of the Matadi-Leopoldville Railway line and the western terminus of navigation on the upper Congo. It is connected with Matadi by a pipe line, 246 miles long, through which crude oil is pumped for the use of river steamers on the upper Congo. It is also an important wireless station. Pop., about 15,000. The adjacent settlement of Kinchasse is the port of Leopoldville.

LEOSTHENES, lē-ōs'thē-nēz (Lat., from Gk. Λεωσθένης). A distinguished Athenian general. When, after the death of Alexander the Great in 323 B.C., a league was formed, having as its object the expulsion of the Macedonians from Greece, Leosthenes was put in command of the confederate army. He first repulsed the Bœotians, who were fighting on the side of the Macedonians, and then defeated Antipater, the Macedonian general, near Thermopylæ. The latter took refuge in Lamia in Thessaly, which Leosthenes immediately proceeded to besiege. (See LAMIAN WAR.) He was killed by a stone thrown from the ramparts, 322 B.C. The Athenians honored him with a public funeral, and Hyperides delivered the funeral oration.

LEOTYCHIDES, lē'ō-tīk'ī-dēz (Lat., from Gk. Λεοτύχιδης) (?-c.469 B.C.). King of Sparta (491-469 B.C.). With the aid of Cleomenes (q.v.) he brought about the deposition of his kinsman, King Demaratus (q.v.), whom he succeeded. He commanded the Greek fleet in 479 B.C., and shared with Xanthippus the honor of the victory over the Persians at Mycale. Afterward (476) he was sent into Thessaly to punish those who had sided with the Persians, but on his return home was convicted of having accepted bribes from the Aleuade, who had once more become masters of Thessaly. He was accordingly banished to Tegea, where he died.

LEOVIGILD. King of the Visigoths from 568 to 586. He was noted as a successful warrior and founder of cities. He did much to civilize his Gothic subjects and to fuse them with the Roman population of Spain into a single people. He is remembered, however, rather for his family troubles than for his real greatness. His son Hermenegild married a Catholic princess and by her influence was converted from the Arian faith, which his father held. As the head of the Catholic party he revolted against his father, who finally conquered and imprisoned him until he was killed in 585. In legend Leovigild has been depicted as a persecutor of the Catholic faith and his son as a martyred saint. Consult *Cambridge Medieval History*, vol. ii (New York, 1913).

LEPANTO, lā-pān'tō, BATTLE OF. A naval engagement fought Oct. 7, 1571, near the Curzolari Islands, at the western entrance to the Gulf of Patras, between the combined fleets of Venice, Spain, and the Papal States and a powerful Turkish armada. The determination of Sultan Selim II to wrest Cyprus from Venice was the occasion of the attack by the states united in the Holy League. The allied fleet, consisting of nearly 250 sail, of which about 200 were great galleys, was commanded by Don John of Austria (q.v.), the natural brother of the King of Spain; the Ottoman fleet, under Ali Pasha, was of about equal numerical strength. The engagement was a desperate and sanguinary one, resulting in a victory for the Christian fleet. About 8000 Christians were killed, while the Turks are believed to have lost as many as 20,000 in killed, wounded, and prisoners. More than 100 galleys were taken, besides a large number sunk. Twelve thousand Christian galley slaves were liberated by this victory, which nevertheless failed of its chief object, in that before battle was joined news came of the successful invasion of Cyprus by the Turks. The battle of Lepanto, however, effectually broke the Turkish naval power in the Mediterranean. It also ended the last Crusade. The Christian

fleet having been stationed, previous to the attack, at the mouth of the Achelous River in the neighborhood of the Curzolari Islands, the name of the latter has been given to the battle by some writers. Consult Sir William Stirling Maxwell, *Don John of Austria* (2 vols., London, 1883), and W. H. Prescott, *Reign of Philip II*, ed. by J. F. Kirke (3 vols., Philadelphia, 1902).

LEPANTO, GULF OF. See CORINTH, GULF OF.

LEPAUTRE, le-pō'tr'. A French family identified with engraving and architecture.—JEAN (1617/18–82), who was born in Paris, engraved 26 plates for Adam Philippon, a cabinetmaker, to whom he was apprenticed; but the rest of his work was independent. The best of his plates are collected in *Œuvres d'architecture de Jean Lepautre* (3 vols., 1751). In 1854 Delcoux and Doury published 100 examples of his work as *Collection des plus belles compositions de Lepautre*.—The most important work of ANTOINE (1621–91), Jean's brother, was the designing of the Hôtel de Beauvais in the Rue Saint-Antoine, Paris, of which the grand stairway and court of honor still remain. He built also the church of the abbey of Port Royal, Paris, in 1646–48, and two wings of the château of Saint-Cloud. He published *Œuvres d'architecture* (1652).—Antoine's son, PIERRE (1660–1744), was employed by Jules Hardouin-Mansart as chief draftsman in the construction of Marly, Versailles, and other royal palaces. He published *Les plans, profils, et elevations des ville et château de Versailles* (1716). He was the sculptor of "Eneas and Anchises" and "Arria and Pætus" at the Tuileries.

LEPCHAS, lep'chaz. A Tibetan stock of Sikkim, Bhutan, and part of eastern Tibet. They are a small but powerful and muscular people, without that repulsive aspect met with in so many Tibetans. Their two principal divisions are the Róng and the Khamba. They are for the most part Buddhists. The language of the Lepchas proper, or Róng, is an archaic form of Tibetan. Mainwaring, whose *Grammar of the Róng (Lepcha) Language in the Darjiling and Sikkim Hills* was published at Calcutta in 1876, entertained the extravagant opinion that this form of speech was "probably the oldest language extant." An essay, *Ueber die Sprache der Róng in Sikkim*, by Schoot, was published by the Berlin Academy in 1882, and a dictionary was revised and completed by A. Grünwedel at Berlin in 1898. Consult Von Siebold, *Results of a Scientific Mission to Japan*, 1830; *High Asia* (London, 1863), and Florence Donaldson, *In Lepcha Land* (ib., 1900).

LEPELETIER DE SAINT-FARGEAU, lep-èl'tyá' de sán făr'zhô', LOUIS MICHEL (1760–93). A French revolutionist. He became president of the Parliament of Paris and in 1789 was chosen to represent the nobility in the States-General. Although conservative at first, he was gradually won over to the revolutionary programme, became president of the Constituent Assembly in June, 1790, and later represented the Department of Yonne in the Convention, where he voted for the death of the King. Regarded by the Royalists as a traitor to his class, he was assassinated by a former member of the King's bodyguard, and his death was made the occasion of a grand funeral by the Convention. Consult *Œuvres de Michel Lapeletier Saint-Fargeau*, with a biographical sketch (Brussels, 1826).

LEPERDITIA, le-për-dish'î-â. A common

fossil ostracod (q.v.), found in rocks of Ordovician to Carboniferous age. Its shells are oblong, $\frac{1}{16}$ to $\frac{1}{4}$ of an inch long, with straight dorsal edge, smoothly rounded surface, and a small eye tubercle. These shells are abundant at some horizons, especially in the lower Trenton limestones of the Lake Champlain valley, and in the Upper Silurian water limestones of New York, Pennsylvania, and Ohio, and in limestones of similar age in Europe. In these rocks they often occur packed together in myriads. See CRUSTACEA.

LEPÈRE, le-pâr', AUGUSTE (1849–). A French painter and illustrator, born in Paris. He became a member of numerous artistic societies at home and abroad and was awarded several medals, including a gold medal at the 1900 Exposition. Besides contributing numerous illustrations to *Le Monde Illustré* (1879–86), *L'Illustration* (1886–1900), the *Revue Illustrée* and the *Revue de l'Exposition* (1900), he painted *Parisiens parisiens* (1890), "Nantes en 1900" (1900), "Paysages et coins de rues" (1900), "Dimanches parisiens" (1901), "Paris au Hasard" (1904), and "L'Eloge de la folie" (1904). He is represented in the Luxembourg and other galleries.

LEPIDIUM. A genus of plants belonging to the family Cruciferae. It includes about 65 species, widely distributed throughout the world. About 25 of these species occur in North America, among them a number of forms naturalized from Europe. The names commonly applied to members of this genus are cress, pepperwort, and peppergrass. *Lepidium sativum*, cultivated from Europe and often escaped from gardens, is the real garden cress, cultivated for its pungent foliage.

LEPIDODENDRON (Neo-Lat., from Gk. λeπίς, *lepis*, scale + δένδρον, *dendron*, tree). An important genus of extinct treelike club mosses, the remains of which are abundant in rocks of Carboniferous age in many parts of the world. These plants, some of which grew to trees 75 to 100 feet in height, were gigantic ancestors of the modern club mosses (*Lycopodium*), with which they have many points of resemblance. They grew in abundance in the swampy forests of Carboniferous coal-measure time, and their trunks, stems, leaves, and cones contributed largely to the vegetable mass which has been hardened into coal. They were stout trees with high woody trunks and central pith, and slender branches that bore closely set strap-shaped or awl-shaped leaves, and at the ends of the branches were borne large conelike fructifications (*Lepidostrobus*) comparable to those of the club mosses, but much larger. Their well-known roots have been called *stigmaria*, which name is also applied to the roots of other Carboniferous plants. *Lepidodendron* may be recognized by the form and arrangement of the scars left on the trunks and stems by the fallen leaves. These scars are rhomboidal or diamond-shaped in outline and are arranged diagonally to the axis of the stem. In this respect they differ from the scars of *Sigillaria*, which is often found associated with *Lepidodendron*, and which have a longitudinal arrangement parallel to the axis of the branch. *Lepidodendron* appears first in the Lower Devonian rocks, was very abundant in the coal measures of Carboniferous time, and became extinct in the Permian period. Several allied genera—*Ullmannia*, a tree trunk from the Devonian; *Lepidophloios*; *Lomatophloios*; and *Knorria*, represented by decorti-

cated stems in Permian rocks—are grouped together in the family *Lepidodendridae*, which is eminently characteristic of Upper Paleozoic formations.

Bibliography. Williamson, "Organization of the Fossil Plants of the Coal Measures, part iii, Lycopodiaceae, Lepidodendree, Sigillariæ," in *Philosophical Transactions* (London, 1872); Leo Lesquereux, "Description of the Coal Flora of the Carboniferous Formation in Pennsylvania and throughout the United States," in *Second Geological Survey of Pennsylvania, Report of Progress*—P. vols. 1, ii, v (Harrisburg, 1880–84); Zittel, Schimper, and Barrois, *Traité de paléontologie*, part ii, Paléophytologie (Paris, 1891); H. Solms-Laubach, *Fossil Botany* (Oxford, 1891); David White, "Fossil Flora of the Lower Coal Measures of Missouri," in *Monograph of the United States Geological Survey*, vol. xxxvii (Washington 1899).

LEPIDOLITE (from Gk. *λεπίς*, *lepis*, scale + *λίθος*, *lithos*, stone). A mineral of the mica group, having a well-marked basal cleavage, pearly lustre, and varying in color from deep red to yellow or gray. It is most frequently found in massive granular aggregates of coarse or fine scales. It resembles muscovite in chemical structure, but its alkali base is lithium instead of potassium, and it contains a varying amount of fluorine. The amount of lithium present is about 5 per cent. Lepidolite occurs in granite and gneiss, especially in veins, where it is associated with tourmaline, cassiterite, spodumene, and muscovite. Some of the well-known localities for lepidolite are Auburn, Me.; Chesterfield, Mass.; near San Diego, Cal.; and Christiania, Norway. The deposits in California are exploited, and the mineral is sold to chemical manufacturers, who recover the lithium. See LITHIUM.

LEPIDOMELANE (from Gk. *λεπίς*, *lepis*, scale + *μέλας*, *melas*, black). A variety of mica related to biotite. It is black, opaque, or translucent, has an adamantine lustre, and differs from other micas chiefly in containing a large percentage of ferric iron. It occurs near Baltimore, Md., and Litchfield, Me., and at several localities in Sweden and Finland.

LEPIDOPTERA (Neo-Lat., from Gk. *λεπίς*, *lepis*, scale + *πτερόν*, *pteron*, wing). An order of insects including all those forms known as butterflies and moths (q.v.). They possess four wings, both body and wings being covered with scales, usually variable in color, and those on the body resembling hair. The adult has mouth parts incapable of biting and usually forming a long, coiled proboscis capable of protrusion. The metamorphosis is great and abrupt, and the pupa usually has its appendages cemented to the body. The duration of the pupa stage is longer than with other insects. The classification of the Lepidoptera is now in a condition of rapid change, authorities differing greatly in their conceptions of families.

Fossil Lepidoptera are very much rarer than any other fossil insects and, except a couple of hawk moths from the Jurassic of Solenhofen, Bavaria, have been found only in Tertiary rocks. The small Microlepidoptera, especially the Tineidae, are represented by many specimens from the amber, and nearly all the other important families of moths have their Tertiary ancestors. The Oligocene shales at Florissant, Colo., have furnished two most beautifully preserved specimens of butterflies (*Prodryas* and *Harbarothoe*),

Bibliography. H. G. Dyar, "List of North American Lepidoptera and Key to the Literature of this Order of Insects," in *United States National Museum, Bulletin*, No. 52 (Washington, 1902); J. H. and A. Comstock, *How to Know Butterflies* (New York, 1904); W. J. Holland, *Butterfly Book* (2d ed., ib., 1904); id., *Moth Book* (ib., 1905); M. C. Dickerson, *Moths and Butterflies* (Boston, 1905); E. P. Felt, "Gipsy and Brown Tail Moth," in *New York State Museum, Bulletin*, No. 103 (Albany, 1906); and for fossil forms: S. H. Scudder, *Fossil Butterflies* (Salem, Mass., 1875), and Von Zittel and Eastman, *Text-book of Paleontology* (New York, 1900). See BUTTERFLIES AND MOTHS; INSECT.

LEPIDOSIREN (Neo-Lat., from Gk. *λεπίς*, *lepis*, scale + Neo-Lat. *Siren*, a genus of amphibians, from Lat. *siren*, Gk. *σείρη*, *seirēn*, siren). One of the three surviving genera of lungfishes. See MUDFISH.

LEPIDOSTROBUS (Neo-Lat., from Gk. *λεπίς*, *lepis*, scale + *στρόβος*, *strobos*, a whirling round). The cone-like fossil fruit of *Lepidodendron*, found in the coal measures of Carboniferous age. See LEPIDODENDRON.

LEPIDOTUS (Neo-Lat., from Gk. *λεπιδωτός*, scaly, from *λεπίδων*, *lepidoun*, to make scaly, from *λεπίς*, *lepis*, scale). An extinct genus of actinopterygian ganoid fishes, allied to *Semionotus*, remains of which are abundant in the Mesozoic deposits of Europe, India, and Brazil. See SEMIONOTUS.

LEPIDUS. The cognomen of an illustrious Roman family of the *Æmilia* gens. The Lepidi played an important part in the history of Rome, from Marcus *Æmilius* Lepidus, consul in 285 B.C., to Manius *Æmilius* Lepidus, consul in 11 A.D. The chief members of the family were the following: 1. M. *ÆMILIUS* *LEPIDUS* (?–152 B.C.), who gained renown as a youth by slaying an enemy and saving a citizen's life, was one of three ambassadors sent by Rome to Egypt in 201 B.C. to govern the realm of the infant Ptolemy the Fifth, *Ptolemaeus*. Although still a young man, Lepidus became the King's guardian (*tutor regis*). He was pontifex in 199, *ædile* in 192, *prætor* in Sicily in 191, and consul in 187, when he helped to conquer the Ligurians, *pontifex maximus* in 180, censor in 179, and consul again in 175. He built the *Æmilian Way* (q.v.).—2. M. *ÆMILIUS* *LEPIDUS* *PORCINA*, consul in 137 B.C., distinguished as an orator. Consult Schanz, *Geschichte der römischen Literatur*, § 74, near end (3d ed., Munich, 1907).—3. M. *ÆMILIUS* *LEPIDUS*, the triumvir (?–13 B.C.). On the outbreak of civil war between Cæsar and Pompey, Lepidus took active sides with the former, and was left in general control of affairs in Rome during Cæsar's absence (49–48 B.C.). He then was sent to Spain as proconsul, and enjoyed a triumph on his return in 47. Cæsar, as dictator, made him his *magister equitum* in this year, and again in 45 and 44, and he became consul with Cæsar in 46. In the fatal year 44 Cæsar made him governor of Gallia Narbonensis; but before he had completed his preparations to leave Rome the great dictator was assassinated. Lepidus, however, could at once rely on the army which he had been drilling, and with its help he was of great assistance to Antonius (see the second ANTONIUS, MARCUS; AUGUSTUS) in his opposition to the aristocratic faction. He was made *pontifex maximus*, and soon left with his army for

his province. Here his military strength led both parties in Rome to struggle for his support by heaping honors upon him; but though he dallied with both, his real sentiments were with Antonius, who, after his defeat at Mutina, joined him in Gaul and formed a sort of coalition with him. Octavius in Rome also put himself in correspondence with them, and the Senate was left without a powerful friend. In the conference that took place at Bononia (Bologna) in October, 43 B.C., the so-called second triumvirate was formed. Antonius and Octavius set out for the East, while Lepidus remained in Italy. From now on he played only a subordinate part in the great affairs of the state, and was even deprived of his province by his colleagues. He was consul, however, in 42 B.C., and governor in Africa from 40 to 36. In 37 the triumvirate was renewed, with Lepidus still as a member, though little consulted in the questions of the day. This proved too galling for even Lepidus, and he made an attempt to gain control of Sicily with his army. Though Lepidus was at first successful, Octavius was soon able to alienate his troops, and the former was literally brought to his knees before the young conqueror (36 B.C.). He was dropped from the triumvirate, deprived of his army, and compelled to live in retirement. Consult Fritz Bruggemann, *De M. Æmili Lepidi Vita et Gestis* (Münster, 1887), and V. Gardthausen, *Augustus und seine Zeit*, vol. 1 (Leipzig, 1891). For the Lepidi in general, see the article "Æmilius" in Friedrich Lübker, *Reallexikon des klassischen Altertums*, vol. 1 (8th ed., Leipzig, 1914).

L'ÉPINE, là'pên', ERNEST LOUIS VICTOR JULES (1826-93). A French author, born in Paris. He studied painting and music, entered the government service, and became secretary to the Duke de Morny. He was referendary in the Court of Accounts from 1865 until he died. He wrote for the *Constitutionnel* and the *Vie Parisienne*, among various journals. He collaborated with Alphonse Daudet in *La dernière idole* (1862); *L'Écuyer blanc* (1865); and *Le frère aîné* (1867). Besides these plays, which were the most successful of his writings, his books include: *La légende de Croque-mitaine* (1863), *La princesse éblouissante* (1869), *Double face* (1890); *Un an de règne* (1891).

LE PLAY, le plâ, PIERRE GUILLAUME FRÉDÉRIC (1806-82). A French mining engineer, economist, and sociologist, born at La Rivière Saint-Sauveur (Calvados). He studied at the Ecole Polytechnique, was appointed to the Department of Mines, became director of the laboratory of the Ecole des Mines and coeditor of the *Annales des Mines* in 1832, and in 1834 published the results of a geological and statistical investigation of the mineral resources of Spain made for the Spanish government. He was subsequently placed in charge of the Commission of Mining Statistics, then newly established, and received the appointments of professor of metallurgy at the Ecole des Mines (1840), inspector of mines (1848), and honorary inspector general (1868). He was prominently connected with the various world fairs. In 1881 he began the publication of the fortnightly periodical, *La Réforme Sociale*, which serves as the joint organ of the society and the unions. He was for several years Senator of the Empire, but after 1870 withdrew from public life. He followed the inductive method, and applied to social

studies the process of scientific observation of phenomena employed in the natural sciences. He is opposed at once to socialism and to *laissez-faire*, and in such writings as *La réforme sociale en France* (1864) and *L'Organisation du travail* (1870; Eng. trans. by G. Emerson, Philadelphia, 1872) urges the necessity to the stability of the social order of sympathy on the part of employer towards employed, which should count among its principal objects a thorough agreement upon the amount and method of payment of wages, and ready means for the investment of savings. His publications further include *Les ouvriers européens* (1855). Consult H. Higgs, in *Quarterly Journal of Economics*, vol. iv (Boston, 1890), and Charles de Ribbe, *Le Play d'après sa correspondance* (2d ed., Paris, 1906).

LE PLONGEON, le plôn'zhôn', AUGUSTUS (1826-1908). A French archæologist. He was born on the island of Jersey and, after liberal and professional study in France, practiced medicine for several years in Central America. There he made investigations into the early history of the continent. His *Sacred Mysteries among the Mayas and the Quiches* (1886) and *Queen Mico and the Egyptian Sphinx* (1896) attempt to establish a relationship between the ancient peoples of Mexico and Central America and those of Asia and Africa.

LEPORIDE, lèp'ô-rîd (from Lat. *lepus*, hare). A variety of European hare, now known in the United States as the Belgian hare (q.v. under RABBIT), which was formerly so named because wrongly believed to be a remarkably prolific hybrid between the common European hare and the rabbit. It is extensively bred in France and Belgium, where it is highly esteemed for food.

LEP'RA (Lat., from Gk. λέπρα, from λεπρός, lepros, scaly, from λεπτός, lepos, scale). A diseased condition of plants during which their leaves are covered with scales. The term was formerly applied also to cutaneous diseases that were accompanied by scaling of the skin. Willan and his followers use the term for psoriasis (q.v.), which is also called *lepra alphas*. Finally, the term has been applied to leprosy (*lepra vera*); this usage, however, is only an example of the confusion in the older terminology of skin diseases. See LEPROSY.

LEPRECHAUN, lèp'rè-kan', or **LUPRA-CHAUN**, lûp-râ- (Ir. *luchorpan*, *lucharban*, or *leuthbhagan*, pigmy sprite, little body, from *lu*, little, *corpán*, dim. of *corp*, body, from Lat. *corpus*, body). A familiar pygmy sprite peculiar to Irish superstition. Sometimes the leprechaun takes up his habitation in the farmhouse itself and will make himself invaluable by rendering various household services. The leprechaun is described as a manikin less than 2 feet in height, attired in cocked hat, laced coat, knee breeches, and shoes with silver buckles. He is wont to infest wine cellars, but his chosen occupation seems to be that of maker of brogans. The presence of the elf in some sequestered dell is frequently betrayed by the noise of his hammering. In such a case the human intruder must fix his gaze upon him and induce him, if possible, by threats, to reveal the hiding place of his reputed treasure or to yield up an inexhaustible purse which he is supposed to possess. If, however, the leprechaun can divert the eye of his captor momentarily, he is able to vanish. The leprechaun is the Celtic congener of the German *Kobold* and the Latin *Incubo*.

LEPROHON, le-prôN', ROSANNA ELEANOR (1832-79). A Canadian novelist and poet. She was born and educated at Montreal and at an early age contributed to the *Literary Garland*, a Canadian magazine. Some of her novels were published in serial form in the press of the United States. Her later works aimed principally to delineate the state of Canadian society

before and immediately after the English conquest. Her publications, some of which were translated into French, include: *Eveleen O'Donnell* (1859); *The Manor House of De Villeraie* (1859); *Antoinette de Mirecourt* (1864); *Armand Durand* (1868). An edition of her *Poems* was published two years after her death.
